These tests are the objects of increasing, not diminishing, interest in the United States. Thus *Education* (Boston, XL, 7) publishes articles on "The Purposes and Methods of Psychological Tests in Schools and Colleges," "The Educational Significance of the Army Intelligence Tests," and "The Place of Psychological Tests in the Admission of Students to College." The old examination paper sought to discover what the candidate knew of certain subjects; the new inquiries are directed to the strength and range of his natural endowment. There is a danger in laying undue stress on capability; nor is a gift for music equivalent to skill in playing the violin. We must still probe knowledge as well as power, lest effort should lack encouragement; and the dull lad whose attainment equals that of the brilliant deserves, perhaps, the greater recognition, as exhibiting evidence of *character*. Again, it is difficult to see how the highest gifts are to be measured, such as humour and imagination. At a public school in England a teacher, discussing some essays on "Wild Flowers," remarked that a wild flower shrinks and shows resentment when it is plucked. A boy near the bottom of the form said: "I know; when you pluck a poppy it foams at the mouth." That was imagination. Pray show us a measuring rod for imaginative power.

That remarkable Rockefeller foundation the General Education Board, according to its latest annual report (dated February 29) appropriated last year to colleges and universities 1,675,000 dollars towards a total of 6,375,000 dollars, raised as to the remainder by themselves. For the purposes of experimental education it contributed to Teachers College for the support of the interesting Lincoln School, New York, which is seeking tentatively "to construct a liberal curriculum, deriving its material from the world in which the student lives," the sum of 115,000 dollars. State school surveys were conducted by the Board, clinical teaching in universities assisted, and secondary and rural education in the Southern States promoted by means of liberal subsidies.

The General Education Board.

THE "A.L." GEOGRAPHIES.

PREPARED ON REGIONAL LINES. PRINTED ON GOOD PAPER. CHEAP.

These are a series of small Geographical Textbooks for the use of Pupils in both Primary and Secondary Schools. They are thoroughly up to date and are very fully illustrated with new Sketch Maps, Diagrams, and Views. Teachers who are taking Geography on the most approved modern lines will find these little books an invaluable aid.

THE BRITISH ISLES, 80 pp., with 31 Maps and Diagrams, and 23 Illustrations, prepared by WALTER T. TAYLOR, F.R.G.S., late Lecturer in Commercial Geography, Leeds Central School of Commerce ... published 8d.

THE BRITISH EMPIRE BEYOND THE SEAS, 102 pp., with 15 Maps and Diagrams, and 27 Illustrations, prepared by JAMES H. TORBITT, M.A. (Cantab.), Assistant Master at the Grammar School, Ossett, and late Principal of Wakefield Pupil Teachers' Centre ... published 8d.

EUROPE, 104 pp., with 11 Maps and 28 Illustrations, prepared by T. W. POWELL, M.A., Master of Method, Bede College, Durham ... published 8d.

AFRICA, 104 pp., with 19 Maps and 20 Illustrations, prepared by THOS. FRANKLIN, A.C.P., Geography Master, East Ham Technical College, and Research Student, London University School of Geography ... published 8d.

THE AMERICAS, 110 pp., with 30 Maps and Diagrams, and 26 Illustrations, prepared by WM. E. WEST, B.Sc., F.R.G.S., Geography Master, West Leeds High School. ... published 8d.

ASIA, 125 pp., with 15 Maps and Diagrams, and 23 Illustrations, prepared by HILDA M. BRADLEY, B.A. Hon., A.C.P., Geographical Tutor to the "Service" and the "London and Northern" Tutorial Colleges ... published 8d.

THE WORLD, with 120 pp., with 42 Maps and Diagrams, and Illustrations, prepared by WM. E. WEST, B.Sc., F.R.G.S., Geography Master, West Leeds High School. ... published 8d.

NORMAL

THE COLLEGE FOR CORRESPONDENCE TUITION.

FOUNDED 1889.

The Normal Way To Success.

FREE. THE NORMAL GUIDE.

Crown 8vo. Price 6d. net.

Free to readers of this paper.

By A. MOTHERSOLE, A.C.P.

A Normal Silver Medallist and Prize Winner.

YOU have been told there is no "royal road" to knowledge.

I'm not going to say there is; but there's an easier way than many people think, and **THAT IS THE NORMAL WAY.**

Normal students know it, and scoop up examination honours; but, as a Teacher, I should like my colleagues who are *not* normal students to know something of the efficient and interesting methods of the **NORMAL CORRESPONDENCE COLLEGE.**

You are thinking of studying under these Tutors? Let me tell you what will happen.

Your work will be arranged for you. There will be no searching through syllabuses and textbooks. You will not do a minute's unnecessary work if you follow the Normal.

You will be told what to read—in textbooks of your own choice. You will have explanations of difficulties sent you on well printed papers, all brought up to date. You will know who your Tutor is and his qualifications.

You will be examined, but examined with one aim—that of passing. For the Normal tests your newly gained knowledge, corrects your exercises—corrects them intelligently, and with the minimum of work on your part. Everything possible will be done for you.

You commence :

- (i) When you wish ;
- (ii) At whatever stage you wish ; and
- (iii) You work at your own rate.

If the Tutors think you could do better, they keep you to your best effort. You don't mind that, though, do you?

The examination will come; you will feel confident and assured. You will know how to write an examination answer—to get the maximum of marks with the minimum of worry.

Will you pass? you say.

I have been through it all, and I say, Give the Normal a chance and you will pass.

Possibly, like hundreds of others, you will get your fees back from the Normal Money Prizes; at any rate, you will have had a splendid education during your spare time at a small cost.

Why miss such a chance?

NORMAL CORRESPONDENCE COLLEGE,

Melford Road, East Dulwich, London, S.E. 22; and Avondale Square, London, S.E.1.

INDIA.

The Government of India's Resolution on the Report of the Calcutta University Commission, 1917-19, has been published. After a summary of the chief sections of the Report, the Resolution proceeds:—"It is necessary that the Government of India take early action regarding those recommendations which directly affect the University of Calcutta, since that university forms the immediate subject of the Commission's investigation and (until the measure which the Government of India now propose passes into law) remains the special care of the Governor-General in Council and of the Governor-General as Chancellor. Other administrative matters, including the future organization of secondary and intermediate education in separation from the university, will appropriately be decided by the Government of Bengal. The concern of the Government of India is the passage of the legislative measures requisite for giving effect to the main recommendations of the Commission regarding the reconstitution of the University of Calcutta and the incorporation of the University of Dacca. The second of these proposals is intended to set up a new type of university in Bengal, which may possibly be the precursor of other universities of a similar nature in that Presidency and elsewhere, and to relieve the University of Calcutta of some small portion of the heavy burden which it now sustains. The legislation to that end has already been introduced in the Imperial Legislative Council. As regards the University of Calcutta, it is the intention of the Government of India to publish and place before the Imperial Legislative Council a measure based on the lines indicated in the remaining portion of this Resolution. The Government of India propose to publish the text of the Bill as soon as possible." There follow outlines of the Bill projected.

Science nowadays receives much attention in India. *The Educational Review* (Madras, xxvi, i) contains a long illustrated article on "The History of Laboratory Chemistry." Early in the year the

Indian Science Congress met at Nagpur under the presidency of Sir Prafulla Chandra Ray, who discoursed on the history and present situation of science in India. Of old, he said, the Hindu was metaphysical and speculative; Britons such as John Mack and O'Shaughnessy awakened enthusiasm for chemistry; Kanailal Dey was the first Indian to acquire fame as a pharmacologist, and from 1895 there began for Bengal a period of original contributions to science; henceforth progress in scientific knowledge—a progress long retarded by the general lack of education—was essential to the economic development of India and to an Indian renaissance. The University College of Science, Calcutta, has been a source of inspiration for Indian students, but it lacks funds. In general, State aid for science is one of the chief requirements of India.

In Bihar and Orissa, says the Report for 1918-19, educational progress was hampered by influenza, plague, smallpox, scarcity, and high prices—a goodly catalogue of evils. The number of public institutions and of pupils in them decreased; but secondary schools and arts colleges showed some growth. An important measure of the year under review was the passing of the Bihar and Orissa Primary Education Act. This Act authorizes municipalities and unions, subject to certain conditions, to make education compulsory on all boys ordinarily residing in the area under their jurisdiction.

ORANGE FREE STATE.

The Education Report states that the year 1918 was a strenuous one. The epidemic of Spanish influenza, dearth of buildings, scarcity of, and a feeling of unrest among, teachers, depleted school staffs, and uncertainty as regards the future composition of the administrative staff rendered administration more difficult than usual. Yet steady progress was maintained. The number of pupils showed an increase of 2,626 for the year; there were more public schools at work, and fewer aided or private schools; five additional hostels were opened for the accommodation of children; and a much larger number of children were conveyed to schools at a distance from their homes. Education in the Province suffers from the frequent migrations of teachers. The matriculation examination continues to be the lodestar of the young in secondary schools; but the Education Department is seeking to divert from it those who have no prospect of continuing a literary education, and to turn them to some practical course. Day continuation classes are proposed at Bloemfontein. One of the inspectors inveighs against homework for the pupils of primary schools. Homework is a subject on which we deprecate the laying down of any universal law, since to abolish it would be in some cases foolish or even criminal.

A. & C. BLACK'S
NEW BOOKS.

JUST PUBLISHED OR ABOUT TO BE.

THE CLASS-ROOM REPUBLIC.

BY ERNEST A. CRADDOCK, M.A.

Crown 8vo. Price 2s. 6d. net.

The author's experiments in the granting of self-government to school-boys have excited of late very considerable interest and attention in educational circles and in many sections of the press. In this volume he expounds the principles underlying these experiments, and describes in detail the successful career, during the last two years, of a self-governing school room community, established in a London school. In this miniature republic, where work is done with most satisfactory results on a competitive system, the master relinquishes his functions of disciplinarian and increases his importance as teacher and guide.

A SHORT SKETCH OF EUROPEAN HISTORY.

By H. E. MARSHALL, Author of "Our Island Story."

Vol. I.—FROM THE FALL OF THE ROMAN EMPIRE TO THE REFORMATION.

Large crown 8vo, cloth, with maps. Price 5s.

This book is not intended to be a compendium of European History, but rather an introductory study recording in as dramatic a form as possible the events and influences which have had most effect on the general development of Europe.

THE MAKING OF EUROPE.

A GEOGRAPHIC TREATMENT OF THE HISTORICAL DEVELOPMENT OF EUROPE.

By W. H. BARKER and W. REES. Large crown 8vo, cloth, illustrated with about 40 Sketch Maps. Price 5s.

This volume gives in a new form the essential features of European History, and is designed to meet the requirements of Continuation Classes and the higher forms of Secondary Schools.

THE EXPANSION OF THE ANGLO-SAXON NATIONS.

A SHORT HISTORY OF THE BRITISH EMPIRE AND THE UNITED STATES.

Edited by H. CLIVE BARNARD, M.A., B.Litt. With contributions by leading writers in each of the self-governing Colonies, in India, and in the United States.

Containing 22 maps, specially prepared. Large crown 8vo, cloth. Price 6s.

The book is designed primarily for the upper forms of Secondary Schools, especially in connexion with advanced courses in "modern studies," and for candidates for history scholarships. At the same time it should prove useful in Evening and Continuation Schools, in Training Colleges, and for private students.

MODERN ENGLAND (1815-1915).

BLACK'S "HISTORY PICTURES."

Edited by G. H. REED, M.A. In special detachable portfolio, containing about 75 illustrations. Price 2s. 6d.

Already published in this series.

MODERN LANGUAGES AT THE FIRST
SCHOOL EXAMINATION.

By WALTER RIPMAN.

THE modern language tests at the First School Examination are intended to ascertain the amount of knowledge that may be acquired under normal school conditions after four to five years' instruction in the first foreign language studied (almost without exception French) and after two to three years' instruction in the second (German, and sometimes Spanish; other modern languages rarely).*

There must be a test of

(a) the power of understanding the printed and spoken word, especially the former; if our teaching fails to equip our pupils with ability to read ordinary books fluently and intelligently, it is a failure, and no amount of colloquial knowledge (the importance of which has in recent years been over emphasized in certain quarters) will make up for any weakness in this respect;

(b) the power of expression in writing and speaking.

I shall also deal (c) with the question what separate test (if any) there should be in grammar, and whether there should be any test of a knowledge of literature, history, life and ways, &c.

In considering the nature of the tests to be applied, we must bear in mind certain limitations: shortness of time available and expense; and we must always ask ourselves whether any particular form of test would react unfavourably on the previous teaching of the candidates and (if the test be

* If adequate time (five periods a week in the first two years, four periods later) is assigned to the second foreign language, there need be no great difference in standard between it and the first foreign language. In one of the recognized "first examinations" it is possible to take, in addition to the full examination in one language the test in unseen translation only in the other.

otherwise valuable) how such attendant dangers may be minimized.

Should the tests be only oral, or only written, or both? A purely oral test might doubtless give satisfactory results, but only if the candidates were interviewed individually, at some length, and by highly qualified and sympathetic examiners. Consideration of the time and the expense involved shows that such a test is not practicable. Again, modern language teachers rightly object to an examination on paper only, which leaves out of account the oral work to which they attach importance.

(a) The tests of understanding the printed and spoken word should consequently be both oral and written.

Conversation is one means of showing that the oral word is readily understood; another is dictation in the conventional spelling. At this stage dictation should be given by the teacher of the candidates, not by the external examiner, as they are then more likely to do themselves justice. While dictation of the usual type is to be regarded mainly as a test of understanding the spoken word, it also serves to show acquaintance with "paper grammar," i.e. such grammatical features as exist only in the written language (e.g. "*la plume que j'ai achetée*," "*la maison que j'ai vue*").

It may be of interest to know that the latest regulations for the London General School Examination allow candidates to render the dictation either in the conventional spelling or in phonetic script. The latter form of dictation tests exclusively the power of discriminating the foreign sounds and of recording them accurately: it does not ensure that the meaning has been grasped.

As regards the written test, it may be suggested by unpromising supporters of the Direct Method that it should be in the foreign language only, a passage being given, and questions set on it to ascertain whether the meaning has been understood. It is, however, extremely difficult in this way to make sure that the finer shades have been appreciated; and one of the grave dangers of pure Direct Method work is contentment with a loose, approximate understanding of the text. A more thorough test is undoubtedly to be found in translation. This is, to be sure, "anti-direct," but it need not entail so much preparation as some teachers seem to think, if the passages set are well chosen. At this stage it is not a question of really artistic translation; but I must hasten to add that, though the language of the rendering may be simple, it must be good. Modern-language teachers sometimes maintain that good English style is not their concern, but that of the English specialist, which is, in a sense, true; but the fact remains that inability to render into adequate English implies inadequate comprehension.

It is now generally agreed that the passages for translation should be unprepared. When books are prescribed there is interference with the teacher's liberty of choice; and conscientiousness in preparing set books may lead to the neglect of all other reading. It may be urged, on the other hand, that preparation for unseen translation may limit the reading to snippets. Collections of these are available; and, while they may serve to increase the vocabulary, they have a deadening effect, because the constant change of subject is distracting, and the uniform difficulty affords no relief. A continuous text is bound to contain pages the reading of which is easy, and hence gives a pleasurable sense of achievement; it will unroll the fate of characters that interest and lend themselves to discussion; it may convey some idea of artistic structure. There are means at the disposal of the inspecting and examining authorities for making sure that continuous texts are read; and teachers may be comforted by being told that the copious reading of continuous texts is quite the most effective method of preparation for a test in unseen translation. The pupils must be taught to love reading, and be provided with plenty of suitable books.

In setting passages it is a mistake to think that the vocabulary should be difficult. If a passage, otherwise suitable, contains words likely to prove unfamiliar, renderings of these should be supplied or, better still, simpler words should be substituted.

While the passages should be mainly in prose, it is desirable that some verse should be included, as otherwise verse may have no place in the pupils' reading; but the choice of suitable verse is by no means easy, especially in French. The Investigators of the School Examinations Council* rightly lay down that the verse should be "of narrative type and, as far as possible, self-contained," and that "sentimental or introspective pieces should be avoided."

(b) The power of expression in writing and speaking should also be tested both orally and in writing.

Reading aloud from a text that has been read in class or from an unseen text serves mainly to test pronunciation. It must be supplemented by conversation on simple topics. In schools where the level of the teaching is high, or in the case of exceptional pupils, the conversation may become more ambitious.

That the written test should consist exclusively of free composition has been earnestly argued by some prominent reformers who maintain that translation from English at this stage is harmful, and they have persuaded the authorities of the Cambridge Senior Local Examination to institute an alternative test in French, with free composition, but no translation, into French. Now, I am the last person to undervalue free composition, but I cannot close my eyes to certain difficulties that arise in connexion with this test. In the first place there is a tendency, encouraged by bad examining, to cram the pupils with "tags," and by "tags" I do not mean, for instance, the conventional forms for opening and closing letters, but passages and incidents memorized with a view to their introduction whenever an opportunity presents itself. Further, examiners tell me that, while there is no difficulty in assessing the best and weakest work in free composition, it is often difficult to mark the intermediate productions on account of uncertainty as to whether the candidate is really "composing" or is reproducing from memory. Differentiation, however, is of importance in this kind of examination because the examiners have to determine not only whether a candidate passes or fails or gains distinction, but also whether he deserves the credit mark or not—i.e. whether he is in the second or the third class (failures being in the fourth class). Lastly, the setting of subjects for free composition is by no means easy. Examiners often show a strange lack of imagination and discretion. Not to mention such subjects as "Napoleon," "Serbia," "Capital Punishment," and "Alcoholism," which have at various times been proposed to me, I shall refer only to subjects set at various examinations last summer—e.g. "Un Incendie," "La Paix," "Dogs and Cats," which afford insufficient suggestion for treatment; or hackneyed subjects such as "Describe all you have done since getting up this morning"; or "Les Fils de Guillaume le Conquérant" and "Sir Walter Raleigh" (where the single subject, "An Imaginary Conversation between William the Conqueror and Sir Walter Raleigh," would have been much more interesting); or "Une Journée pluvieuse à la Campagne" (where ignorance of *pluvieux* may frighten off the candidates). When a mere subject is set it is at this stage best to ask for a simple narrative (within the candidate's sphere of interests and experiences) or a dialogue.

The Investigators refer to other forms of free composition. In some examinations a story is read out (in English or the foreign language) and the candidates are supplied with a summary (also in either language); as they say, this is a test of memory, and not strictly free composition. Or a summary only is supplied. The headings may be in English—and on this they offer no comment—or the summary may be in the foreign language, which "some candidates regard as a missing-word competition, and many think it their duty to incorporate all the headings verbatim in some part or other of their essay." This form, however, the Investigators recommend if "the briefest possible" headings are given. I prefer the headings to be in English.

* They will subsequently be referred to merely as "the Investigators." The Report on Group II (Foreign Languages) has now been issued by H.M. Stationery Office at 4d. net.

One other form of free composition may be mentioned that has given good results: a narrative based on a series of three to six pictures that tell a story, after the manner of some of Haselden's cartoons.

The free composition must be regarded as mainly a test of vocabulary, idiom, style, &c., and only secondarily as a test of grammar. This will explain the following suggestion as to marking free composition, almost as difficult a task as the marking of English essays. Experience shows that marking simply by impression leads to wide divergencies among examiners; some standardization seems essential. I suggest that, if 20 be the maximum for a free composition, marks should be assigned as follows:

Standard.	Vocabulary, &c.	Grammar.
A (Excellent) ...	12 ...	8
B (Good) ...	9 ...	6
C (Fair) ...	6 ...	4
D (Weak) ...	3 ...	2
E (Worthless) ...	0 ...	0

Almost perfect and altogether worthless work is rare, and there is no difficulty in recognizing it. It only remains to establish standards as to what may be considered Good, Fair, or Weak, and a little practice soon renders that easy.

One reason why excessive stress should not be laid on grammatical accuracy in the free composition test is that the mediocre but cautious candidate can avoid difficulties. He can write a free composition without a subjunctive or a participle or a personal pronoun as object.

In translation from English into French difficulties have to be faced. The candidate cannot render correctly "It is the oldest house I have seen," or "The more I saw of him the better I liked him," without giving evidence of some practical knowledge of grammar. This test is indeed to be regarded as primarily a test of grammar, and to a smaller degree as a test of vocabulary. It is a common mistake to set too hard an English passage, the reason often being that the examiner seeks for a passage in books. It is much wiser for him to construct such a passage himself, and it may well be a continuation of a narrative begun in one of the passages for unseen translation.

A pupil who, after five years' teaching, is incapable of rendering a piece of simple English into French has been badly taught, and the amount of preparation required is so slight that it cannot be regarded as a disadvantage that counterbalances the great value of this test.

(c) Should there be questions on grammar? Few modern language teachers will desire the reintroduction of the old type of crude grammar question—"Give a list of the words in *-al* that do not form their plural in *-aux*"—which still flourishes in many papers set by our classical colleagues. Questions in applied grammar are also unnecessary; they were in great favour for a time, but often degenerated into puzzles owing to the quite laudable desire of examiners to be original, which, however, often led to eccentricity. There is, however, a valuable test that may form part of the oral examination: the candidates are asked questions on accident (also word-formation and vocabulary), and the quickness of response is noted. It is quite a trustworthy indication whether the candidate has a ready command of his knowledge.

To ask questions on literature and history appears to me to be premature at this stage. The First School Examination is primarily a pass examination, and not a test of exceptional ability. The average candidate from the average school cannot be expected to have acquired much literary and historical knowledge. Where the examiner knows the teaching to be very good, or recognizes exceptional gifts in a candidate, he may well exceed the usual limits of the oral test, as has been suggested above; as a rule he will not go beyond, let us say, questions about the characters in the text read, or a question, e.g., as to the century in which its author lived.

It may be profitable to add some remarks about *marking*. As the Investigators suggest, about equal marks should be (and in practice are) assigned to (a) understanding and (b) ex-

pression. The oral test is treated variously in our examinations; it is marked quite separately, but is taken into account in the case of pass-or-fail border-line candidates; or the marks for dictation or for the complete test are added to those obtained in the written test; or success in the oral test counts towards distinction.

The methods of marking vary considerably according to present practice. There are:

(i) marking by impression (some times rather awkwardly called "constructive" marking). This may refer to a whole piece (but this gives too much scope for discrepancies among examiners) or to sections of a piece to each of which a maximum mark is assigned; or it may be standardized in the manner suggested above for the marking of free composition.

(ii) Destructive marking. Here either one mark is deducted for every mistake, whatever its nature may be—a very rough and unsatisfactory method; or full and half (and quarter) mistakes are deducted. This may to some extent be supplemented by impression marking, a bonus consisting of a few "grace" or "merit" marks being added at the discretion of the examiner.

It may be well to record the opinion that where the same mistake is made several times it should not be counted as a mistake more than once; that candidates should not be penalized for consequential mistakes (e.g. the use of *elle* referring to a noun that has wrongly been made feminine); and that no marks should be deducted for mistakes in English spelling. On the other hand, in translations from the foreign language poor English should lead to a deduction of marks—as it should in every other subject. Something is also to be said for taking off a limited number of marks for bad handwriting—a piece of anti-social viciousness that deserves the severest condemnation.

In conclusion, we may recognize with satisfaction that there seems to be fair agreement as to the nature of the test in modern languages at the First School Examinations. At the outset of their very valuable report, the Investigators disclaim any desire to see all modern-language papers "reduced to a rigid type," and then—the one humorous touch in their sober investigation—proceed to lay down exactly what form they should take. In their opinion, the test should contain passages for unseen translation (one or two prose and one verse); a passage for translation into the foreign language; free composition, one subject only, with the briefest possible headings; and an oral test. No set books; no questions on grammar.

This agrees very closely with the opinions I have expressed. I dissent from the view that there should be only one subject for free composition. This appears to be recommended for the sake of uniformity of marking; there is in this case nothing in the argument that a choice of alternatives bewilders the candidate and wastes his time. I believe that we should recognize different types of candidates, with varying degrees of imagination, and should provide accordingly different subjects, some with only slight guidance as to treatment, others with brief headings in English; others, perhaps, based on one of the unseen passages.

The Investigators' conclusions also agree with the general practice of the chief examining bodies recognized by the Board of Education. A few, it is true, are a little backward; in some the oral test is still optional, some retain questions in grammar, some allow a prose unseen as an alternative to the piece of verse. In several cases notice has been given that these features will shortly disappear. It may be taken, therefore, that we are approaching stability in the nature of the papers. Whether the marking is uniformly satisfactory is another question. On the whole, however, it may fairly be maintained that there has been steady improvement in recent years in our modern language examinations of this standard.

THE Board of Education are again this year making grants of maintenance and travelling allowances to suitable teachers to attend approved Summer Vacation Courses in Physical Exercises. Application forms should reach the Board before May 20.

UNIVERSITIES AND SCHOOLS.

LONDON.

The annual report of University College has now been issued. The total number of students for the session 1918-19 was 2,048, an increase of 977 on the previous year. This increase took place after the Armistice, and mainly in January 1919, and consisted almost exclusively of ex-service men. Arrangements were made whereby the ex-service men who resumed work in January 1919 were enabled to complete a full session's work by the beginning of August, and most of them succeeded in so doing. The total revenue of the College for the year 1918-19 was £75,781, of which £26,304 was from fees. The total expenditure was £77,824, causing a deficit of £2,210. This deficit arises from the increase in salaries that has become necessary, and generally from the increased cost of running the College. The report contains a summary of the main work of the year. The student body included 127 members of the American Expeditionary Force and seventy-one members of H.M. Overseas Expeditionary Forces. It also included 253 post-graduate and research workers.

LIVERPOOL.

Secondary schools of every description are full; nine are being built and will be utilized to their utmost capacity, and the demand for secondary education is daily increasing. The proportion of secondary-school pupils who proceed to a university is at least in the ratio of two to one compared with that obtaining before the war. There is little need for wonder that the modern universities in particular are appealing for financial assistance from the public for whose benefit they ultimately exist. The requirements of the Universities of Manchester and of London have been referred to recently in these columns. Liverpool is now asking for a sum of one million pounds. The Advisory Committee on University Grants will no doubt be able to allocate some of the funds at its disposal to the University; but the chairman of that committee has stated that the best argument which the University could bring to bear would be a successful appeal to local support. At a public meeting, presided over by the Lord Mayor, promises and actual contributions to the amount of £200,000 were obtained. At least £500,000 is, however, required immediately. Indeed, the need is so urgent that, although huts have been erected in quadrangles and grounds, open courts roofed over, and even private houses pressed into the service, many students are being turned away. The appeal for new and the extension of old buildings, the equipment of laboratories, and the endowment of chairs is abundantly justified and ought to meet with a liberal response.

GENERAL.

Misconceptions exist as to the constitution and functions of the Burnham Committees. Though in each case authorities and teachers are brought together under the ægis of the Board of Education, their findings are not compulsory. In the case of the elementary-school committee it will still remain for the teachers to insist that the scales shall be uniformly and actually brought into operation, even if, and when, both sides have come to an agreement, which at the time of writing is by no means certain. And it must be borne in mind that the only scale so far published is a minimum.

When Brigadier-General Colvin asked Mr. Fisher, in the House of Commons, whether a national scale for secondary-school teachers would soon be adopted, he was informed that a joint-committee of local authorities and teachers would shortly be constituted. The answer was accurate as to fact; for negotiations, with the Board as intermediary, have been in progress for months past, the teachers' associations had appointed their representatives before Christmas, and the first actual meeting of the committee is expected on May 4. Here, however, the problems to be solved are more diverse than in the case of the elementary committee. Secondary education is given in at least three distinct types of schools: in those maintained and aided by local education authorities; in non-profit-making independent schools, such as those represented upon the Head Masters' Conference and by the Girls' Public Day School Trust; and, finally, by a host of private and preparatory schools. It would seem impossible for the last-named to be represented upon either side of the committee; no organizations exist which could be utilized for that purpose, yet the 1918 Education Act was forced to recognize their existence, requires local authorities to take them into account in drawing up education schemes, and makes provision for their inspection. No salary scales which ignore them can be accurately described as national. The teachers in schools of the second type are represented fully by their associations, but it is not easy to

see how they can be represented upon the employers' side. Now that the County Councils Association have agreed to come in, the first type is fully provided for; but it is well known that that association, fearing the additional expense entailed by higher salaries, desired the Treasury to bear a larger share of the burden, but was met by a refusal. It will not readily agree, therefore, to really adequate scales. In these circumstances no agreed scales are likely to be applicable to all secondary schools, as will be the case with the elementary scales. Moreover, one thing is certain, the teachers' associations will refuse to accept scales which fail to provide a decent livelihood, and if they are forced to do so they will be supported in their action by their members. It is of paramount importance that agreement should be reached.

WALES.

Welsh authorities are face to face with serious financial responsibilities, as the result of the recent increases in salaries and in other forms of expenditure upon education. In Swansea the rate has increased to 6s. 3d., which includes a

rate of about 1s. for improvement in salaries. This authority has drawn attention to the loss which is incurred to the rate-payers by the prolonged delay on the part of the Board of Education in forwarding a sum of about £50,000, which it is claimed is due to it in the form of grant, and a deputation has been selected to interview the Board on the matter. In Monmouthshire the estimated cost of education for the current financial year is £94,660, exclusive of capital expenditure on buildings of £983,000. The higher education rate will be 6½d. in the £, while the elementary rate is equivalent to 4s. 9d., so that the total rate is below that required in the Borough of Swansea. Compared with these figures, the rate in another county area, Montgomeryshire, is low, the total levy on both higher and elementary education being 2s. 3½d. in the £.

In spite of these very substantial increases in educational expenditure, there is still some unrest among the primary teachers, and once again we are threatened with a strike in the Rhondda district. They assert that the scale of salaries which was recently adopted does not compare favourably with that in operation elsewhere, and they sent a request to the Education Committee for a conference on the question. The Committee, however, in view of a general conference of all the authorities in South Wales and Monmouthshire to be convened by the Lord Mayor of Cardiff at some future date, have declined to meet representatives of the teachers. The result of this refusal is that 95 per cent. of the teachers have resolved to send in their resignations as a protest. To the onlooker this action appears to be unduly hasty and unreasonable, because it is far more satisfactory, in view of the present differences between the scales of salaries in different areas, that the whole position should be discussed from a broad outlook, and if the proposed conference of authorities at Cardiff decides in favour of forming Whitley Councils, it is more than probable that any grievances from which the Rhondda teachers may suffer will be speedily adjusted. That the Rhondda authority is not unsympathetic towards the just claims of the teachers is shown by the fact that in 1917 the expenditure on salaries was £108,000, while the present sum is £280,000. If the present demand is conceded it will mean a further addition of £120,000.

In Montgomeryshire the Burnham scale of salaries has been adopted, but a request for a further increase of 15 per cent. has been refused.

One of the schools to which a special grant has been given for educational experiments is the Welshpool Intermediate School, where a highly successful course in agriculture has been developed. This school, being situated in the heart of agricultural Wales, is most favourably situated for embarking on an experiment of this character, and the Board of Education have just issued a full report of the work done, including full details of the curriculum and the time-table of the pupils. The head master, Mr. R. E. Owen, who is responsible for the pamphlet, states that the main object of the staff was to endeavour to find out what the treatment of rural subjects in a real educational sense, apart from their vocational side, involved, and also how to make the teaching of agriculture an instrument of sound education. It is not the purpose of the course to give definite instruction in the technical and manual processes of agriculture, nor to train the pupils to become farmers. The main principle is that the environment and concrete surroundings of the school and the pupil's home should be utilized as far as possible towards their intellectual progress. Courses in physics, modified so as to have definite application to agricultural facts, as well as in botany

Secondary
Education.

and chemistry, form part of the curriculum, while an attempt is made to "ruralize" other subjects in the curriculum. For example, a distinctly local and rural bias is imparted to the teaching of history, and we are assured that it has greatly stimulated the interest of the boys in the subject. The pamphlet is generally very instructive and should be studied carefully by everyone who desires to know how a course of vocational training can at the same time provide the basis for a sound general education.

Modern Language Association.

Last year it was resolved to form a separate branch for Wales of the Modern Language Association. The first general meeting was held at Barmouth and was well attended. When the Welsh intermediate schools were first established great stress was laid on the oral teaching of French, and we believe that we are correct in stating that it was the Central Welsh Board which was the first examining body to insist on an oral examination in the schools at the annual examination. Modern languages have consequently occupied a strong position in the curriculum of the county schools, and one of the resultant difficulties at the present time is how to give adequate prominence to the teaching of Welsh without endangering the position of French. The policy of the Welsh Department has not been consistent with regard to this question. At one time it seemed to advocate the practical exclusion of French in favour of Welsh, so that to meet their wishes many schools made French alternative with Welsh on the time-table; but its more recent policy is to encourage the teaching of both French and Welsh and to deprecate their being made alternatives. The best solution of this problem has, however, not been found. We refer to this matter in order to show that in Wales there is really an excellent field for the development of a strong Modern Language Association, while the fact that it is a bilingual country makes many interesting experiments in language teaching possible. Mr. Herbert Lewis, M.P., Parliamentary Secretary to the Board of Education, addressed the Barmouth meeting.

Several college reunions were held during the Easter vacation, in accordance with the usual custom. The reunion at Bangor College was addressed by

Reunions.

Mr. Herbert Lewis, who impressed upon the authorities the need of raising as soon as possible their penny rate contribution towards the expenses of the University, in order that Wales might qualify for the Treasury grant of £50,000. So far, it appears, the counties have shown no great keenness in this direction, and the University is in danger of being seriously hampered in its development, as it is difficult to give effect to the recommendations of the Royal Commission. At Aberystwyth College Mr. H. H. Humphreys was elected president, and Mr. Jenkin James (director of education for Cardiganshire), treasurer.

Local Schemes.

We are not aware that any Welsh education authority has made much progress with the formulation of local schemes as required by the Education Act (1918), and it appears that only few authorities have consulted the teachers with regard to details. Great secrecy seems to be preserved as to the procedure, and progress, if any, is remarkably slow. Cardiff, for example, has shown a deplorable lack of interest in the matter and a strange unwillingness to face the difficulties. The Act itself was strongly criticized by many members, on the ground that it was passed without adequate discussion, that it was too great an experiment at a period immediately following on a great and exhausting war, and that the financial demands are too formidable for the authorities to bear. The whole question has been shelved for another month. In none of the other county boroughs has any substantial progress been made with these schemes. Glamorgan seems to be the only county which has formulated a definite policy and endeavoured to give effect to it.

The Welsh Language.

By a majority the parents of Wrexham have decided in favour of teaching Welsh in the elementary schools, and arrangements are now being made to give effect to the decision. Representatives of the Central Welsh Board gave evidence before the Departmental Committee on Secondary Education, on April 23. The case for the Board was presented by Dr. T. H. Morris, Principal D. R. Harris (Bangor Training College), Mr. J. Trevor Owen (Swansea), Mr. W. Edwards, Mr. W. H. Robinson, and Miss Price.

SCOTLAND.

A Joint Council of authorities and teachers is to be set up at an early date. The council is to consist of fourteen members, seven from the Association of Education Authorities and seven from the Educational Institute. The general object is to be the consideration of all matters which affect

the conditions of service of the teaching staffs throughout the country and the promotion of effective co-operation between the authorities and the teachers. The scope of the council's interests is defined in the widest terms. It is to be at liberty to express opinions on any questions which may be referred to it by the Department, the authorities, or the Institute. Probably its most important function will be to give guidance in the interpretation of the national minimum scales in cases of dispute. Whether, as a matter of fact, the council will count for very much is doubtful. At the last meeting of the Institute Council it was agreed that its conclusions should not be valid until confirmed by the executives of the two bodies represented on it. The probable effect of that provision is impotence in regard to everything that really matters. The teachers, however, do not seem to be anticipating this. For the seven seats that have to be filled thirty-one nominations have been made from all over the country.

The circular on approved expenditure sent to education authorities in the course of the month by the Education Department has caused much heart-burning on the part both of authorities and teachers.

Approved Expenditure.

As regards salaries of teachers, it is intimated that the full 50 per cent. of grant is to be allowed on all salary payments which are obligatory in terms of the minimum national scales, but payments made to non-graduates to bring them up to the graduate level in terms of the footnote to the scales are expressly characterized as non-obligatory. This means, of course, that those authorities which have taken advantage of the permission to deal generously with the non-graduates will themselves have to meet the entire cost, while those who have kept salaries down to the bare minimum are to be rewarded for their stinginess. The certain result will be an outburst of indignation on the part of the teachers under the backward authorities, which will make the salary problem again acute. Even before this the question of a levy for a fund which would be in reality though not in name a strike fund was being vigorously discussed, and there was talk of compelling the authorities which had refused to go beyond the legal minimum to bring up the non-graduate salaries to the graduate level. The virtual encouragement of these authorities by the Department makes the situation decidedly serious. It has been the contention of the teachers from the beginning that the permission given to the authorities carried with it the implication that the Department would recognize expenditure for this purpose as approved expenditure for grant. The Department's action does not seem to leave the teachers with any alternative to an aggressive campaign for adequate salaries. Meanwhile, there is talk of an appeal to Parliament to get the Department's decision set aside, but the prospect of a satisfactory outcome to such an appeal is not bright.

If the ideals that inspire the Memorandum that has just been issued by the Scottish Board of Health in regard to the medical inspection and treatment of school children get a chance of realization,

School Medical Service.

the effect of the Board's activities should not be long in appearing in an obvious improvement of the public health. Special emphasis is wisely laid on the need for preventive work, hygienic conditions of schools and pupils, physical education and training, and early attention to teeth, eyes, breathing, &c. The memorandum contemplates the systematic inspection of each child at three periods of school life, and the provision of facilities for treatment of defective vision and teeth, diseases of the ear, nose, and throat, and similar ailments, which impair the child's health and efficiency. It is not intended, however, that treatment should be provided by the education authority in cases of accident or of casual or serious illness. Attention is also called to the need for co-operation between the education authority and the public health authority, and the suggestion is made that the two authorities may, with mutual advantage, use the same premises and employ the same medical officers and nurses.

The transfer of reformatory and industrial schools in Scotland from the Scottish Office to the Education Department, as from April 1, marks another important step towards the unification of all

Reformatory Schools.

the agencies that make for the well-being of the children. The new arrangement will remove the financial disabilities under which these schools have laboured in the past, and bring to an end various anomalies that adversely affected the teachers. The next move should be the complete transfer of the children at present under the charge of the Poor Law authorities to the more kindly care of the Education authorities.

Strange stories, that illustrate the difficulties under which education is carried on in the remoter parts of the Highlands, are coming from Skye just now.

Starving Children in Skye.

At the last meeting of the Inverness authority it was reported that many children on the east of the

island had been kept at home because they were half-starved. The School Management Committee had investigated the cases and intimated that they could not enforce attendance. The very inadequate steamer service had caused a serious scarcity of food supplies, and the pupils were too weak to come to school. That the difficulties are not all unavoidable, but may in some instances be due to blundering, is suggested by another episode connected with the shortage of transport facilities. Portree Higher Grade School, to which children come for higher education from Skye and the Outer Isles, was closed for holidays on the Wednesday before Easter. To allow thirty-five of them to get home conveniently, the Government was petitioned to permit the steamer going north to call in at Portree, but, though it would have meant a delay of only an hour, the request was refused. In consequence, the children had to leave Portree at six o'clock on the Thursday morning, sleep in railway carriages on Thursday night, and then go on their journey on the Friday.

It has been decided by the Joint Education Committee of the two great Presbyterian Churches to appoint a director of religious instruction in each of the four provincial committee centres. The work has hitherto been done by prominent ministers of the Church and has not been conspicuously successful, probably because most of them lacked the rather special gifts required for dealing with students. If the right men are appointed now a great improvement may be looked for. It is the intention of the Joint Committee of the Churches that, in addition to giving a systematic course of lectures on religious instruction, the new directors should interest themselves in the social and religious work of the colleges and act as chaplains to the students. The interesting suggestion is made that theological students should also attend the lectures as part of their training, with the view of fitting themselves for the organization and management of Sabbath schools and religious work among the young.

At the recent graduation ceremony in Aberdeen University, Sir George Adam Smith, the Vice-Chancellor, intimated that Sir Thomas Jaffrey, the actuary of the Aberdeen Savings Bank, had given £20,000 as the endowment for a chair in Political Economy. St. Andrews is now the only Scottish University without a professor of economics.

IRELAND.

Mr. Macpherson has resigned the Chief Secretaryship after the Home Rule Bill has passed its second reading. The Education Bill has not passed its second reading. Does this mean that it will be dropped? Everything depends on the attitude of the new Chief Secretary—Sir Hamar Greenwood—towards the Bill. Pressure will, no doubt, be brought to bear on him from both directions, for and against. At the time of writing these notes, Sir H. Greenwood has not taken up his office, and no one knows what his position will be. It may, however, be stated with emphasis that educational circles will be filled with dismay if the Bill is abandoned. Everyone admits that educational reform is essential for the progress of Ireland; experts have worked unceasingly for a long time in shaping a scheme for progressive improvement; and even its worst enemies admit that the Bill contains many excellent provisions. If it is abandoned, what then? Who will take up the task again? The answer, no doubt, is ready, that under Home Rule Ireland will fashion her own scheme or schemes of education. To which (the passing of Home Rule being assumed) two things, among others, may be urged in reply. First, will schemes equally favourable to the religious claims of the present Bill's opponents be passed by both the Irish Parliaments? Secondly, it will be at least two years before a Home Rule Parliament could pass a Bill, and in the meantime how is education to be kept going? And for those who wish Ireland to remain undivided, is there not now an excellent opportunity to secure one educational system for the whole country? By far the best course will be to pass the Bill. If Home Rule comes, it will be within the power of the Irish Parliaments to modify it, and meanwhile a commencement of reform can be made. If, however, the Bill is abandoned, there is only one way of escape from an educational collapse, certainly in a large number of secondary schools, and that is, to pay to the present Irish educational boards for the benefit of teachers the Irish equivalent of the Treasury grants for education in Great Britain. This will secure the interests of Irish teachers, and a teaching profession in Ireland will still remain a possibility. The facts should be faced. Irish teachers have waited patiently during the past twelve months. They saw in the Education Bill clauses which secured

to them financial redress for the year ending on March 31 last. When they asked the Government for temporary assistance, the reply was that the Bill must be passed first and then all would be well. This implied that the Government would do its best to pass the Bill. The Government having done nothing of the kind, it is for the Government now to make amends, and if education collapses for want of funds the responsibility will rest upon the Government alone. There is need of an immediate pronouncement from the Government. The end of the educational year is rapidly approaching, and the present dearth of teachers in Ireland will become dangerously accentuated during the summer months unless there is definite prospect of redress. Secondary teachers have seen themselves deprived of at least £64,000 for last year, and it is not true that hope is immortal.

It was expected in some quarters that the National Teachers' Organization, largely a Roman Catholic body, would cease to support the Bill after the declaration of the Roman Catholic bishops against it, but this has not proved the case. The President, Mr. T. J. Nunan, of Tralee, at the Annual Easter Congress, gave strong support to the Bill, and even after considering correspondence from the Bishop of Ross the organization declared in its favour and suggested that bodies interested in education should confer for the purpose of readjusting the present Education Bill so as to bring it more into harmony with the aspirations of the Irish people. The bone of contention is the nature and composition of the Department of Education proposed in the Bill; this has been objected to in various quarters, but at present no satisfactory amendment has been suggested. By the constitution of the Legislative Union between Great Britain and Ireland, the Chief Secretary must be the head of the Department. The simplest amendment would be to arrange that the other two members of the Department should be educational experts, one Catholic and one Protestant, and that the Advisory Board or a committee representing them should be given wider control over the Department's acts. The National Teachers' Congress suggested as a scale of salary for National teachers the following basis:—Assistant teachers, £200 rising by annual increments of £15 to £320, and then by increments of £20 to a maximum of £500. On promotion to principalship a teacher to receive two annual increments, and proceed to a maximum of £600.

There is no doubt about the support of Protestants of all classes for the Bill, but the lay Catholic teachers in secondary schools are equally anxious for it to pass, as their position is far the worst of all teachers in Ireland. The Association of Secondary Teachers, mainly a Catholic body, held a meeting at Easter in Dublin to consider replies received to a circular document sent on behalf of the association to the heads of all schools in which members of the Association were employed. The circular asked for an immediate increase of 140 per cent. on the salaries obtaining in 1914, which were £140 for men and £90 for women. The majority of the replies stated that whilst the managers sympathized with the request, it was impossible for them to comply owing to the inadequacy of the sums received from the Intermediate Board. In particular, the Christian Brothers said they could not meet it in any way. The Catholic Head Masters' Association said they were willing to give a bonus all round of £20, but the meeting considered this entirely inadequate, and decided to negotiate again for more favourable terms. The Association pointed out that in Catholic schools the average salaries were £120 for men and £90 for women in 1917-18, and £139 and £97 respectively for 1918-19. In non-Catholic schools, the figures for 1917-18 were £166 and £92, and in 1918-19, £180 and £104. The Munster Branch of this Association, meeting in Cork, discussing the Education Bill, refrained from expressing any opinion as to its merits, but claimed that if the Bill could not be amended to meet objections on religious and national grounds, it was the duty of the Irish people to see that secondary teachers will no longer have to work for an average salary of £139 a year, which is scarcely equivalent to £50 before the war. They urge that upon those who wish the Bill rejected there is a duty incumbent to propose another scheme which will remedy the existing abuses.

A Royal Commission has been appointed to inquire into the financial resources of Dublin University and of Trinity College, Dublin; into the administration and application of those resources; into the constitution of the University and the colleges; and to make recommendations. The Commission consists of Sir A. Geikie (Chairman); Rt. Hon. Sir John Ross, Judge of the Irish Court of Chancery; Sir A. E. Shipley, Master of Christ's College, Cambridge; Prof. J. S. E. Townsend, Fellow of New College, Oxford; and Dr. J. Joly, Professor of Geology in Trinity

MACMILLAN & CO.'S NEW BOOKS.

Life of Lord Kitchener.

By Sir GEORGE ARTHUR, Bt., M.V.O., Private Secretary to Lord Kitchener, 1914-16. With Prefaces by the Marquis of Salisbury and Earl Haig. 3 vols. With Portraits and Plans. 8vo. £2. 12s. 6d. net.

The Beginnings of Christianity. Part I. —The Acts of the Apostles. Edited by F. J. FOAKES JACKSON, D.D., and KIRSOPP LAKE, D.D. Vol. I, Prolegomena I. The Jewish, Gentile, and Christian backgrounds. 8vo. 18s. net.

An Introduction to Old Testament Study. For Teachers and Students. By the Rev. E. BASIL REDLICH, M.A., Director of Religious Education, Wakefield Diocese. With Foreword by the DEAN OF WESTMINSTER. 6s. net.

The Challenge.—"Here we have exactly the book to place in the hands of our teachers in Sunday School or Day School. . . . Most earnestly do we urge upon Diocesan Inspectors the immense opportunity now given them. If they have a courage equal to that of Mr. Redlich they will lose no opportunity of commending this book to teachers and managers of Church Schools. . . . Every mother ought to read it; and the clergy, too, will find it an immense help in the preaching of the Old Testament."

Modern Geometry. The Straight Line and Circle. (A New and Revised Edition of the Author's "Plane Geometry for Advanced Students, Part I.") By CLEMENT V. DURELL, M.A., Senior Mathematical Master at Winchester College. 6s.

The Educational Times.—"The book before us and its predecessor, 'A Course of Plane Geometry, Part I,' stand head and shoulders above their competitors. It is, indeed, a relief to have interest sustained, accurate mathematics, and a profusion of examples in one textbook."

A Geography of Asia. By JOSEPH MARTIN, B.Sc., Senior Geography Master, Coopers' Company's School, Bow, E. With numerous Maps and Illustrations. 5s. [*Macmillan's Practical Modern Geographies.*]

Nature.—"More than fifty excellent black-and-white maps, most of which show relief, and as many finely reproduced illustrations add considerably to the value of the book. . . . The use of a volume like this must result in raising the standard of geographical teaching, and, incidentally, in justifying full attention to the subject in the school curriculum."

Macmillan's Graphic Geographies. **The British Empire.** By B. C. WALLIS, B.Sc., F.R.G.S. Sewed. 1s. 6d.

Macmillan's Geographical Exercise Books. **Key to Physical Geography.** With Questions by B. C. WALLIS, B.Sc., F.R.G.S. Limp cloth. 4s. 6d. net.

W. & A. K. Johnston's Publications.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

College, Dublin. Prof. Waterhouse is the secretary of the Commission.

The National University of Ireland has given notice of an increase of entry fees. In and after 1921 the Matriculation fee will be increased by £1, and the fees for entry for all other examinations, except the certificate in commerce, will be increased by 10s. No increase will be made in the case of students who matriculated in the late Royal University of Ireland. Notice is also given that after the academical year 1920-21 no student can begin his studies in the Faculty of Medicine (including dentistry) until he shall have matriculated in the Faculty of Medicine.

The Department of Agriculture and Technical Instruction has issued its Programme of Summer Courses of Instruction for Teachers this summer. They will begin on July 6 and close on July 30, except in Rural Science, which will begin on August 3 and close on August 27. Teachers attending the courses will receive £5. 3s. towards their expenses and third-class railway fare for one return journey. There is a large number of courses this year in the following subjects:—Colloid chemistry; wireless telegraphy; turbines, steam and hydraulic; commercial arithmetic and economic geography; business economics and advanced economic geography; cabinet-making; chair-making; painted furniture-making; coloured embroidery; jewellery; elementary millinery; household handicraft; experimental science; drawing; lettering and illumination; manual training (woodwork); domestic economy; rural science (including school gardening). The courses in experimental science are limited to teachers in secondary schools who have already obtained recognition as teachers of the Junior Grade Course in physical science, and will be held in physics, chemistry, botany, and hygiene. A note is added on domestic economy that it is proposed shortly to make this a compulsory subject of instruction in girls' schools seeking recognition by the Department under the terms of the Programme for Day Secondary Schools, and teachers in such schools are therefore advised to secure recognition as teachers of the subject as soon as possible. The Department has also issued the time-table of the Technical School Examinations to be held in May.

SCHOOLS.

LADY MARGARET HALL.—The following awards have been made to scholarships and exhibitions at the college:—H. E. A. Northcott (Royal School, Bath), James Cropper Scholarship, £50 (English). A. Simpson (North London Collegiate School), Honorary Scholarship (French). M. H. Blyton (University College, Cardiff), £40 (French). M. E. Gibbs (Newcastle High School), £35 (History). C. Turner (Municipal School, Huddersfield), £35 (English). A. C. Roxburgh (Francis Holland School), Exhibition, £20 (Classics). E. Gardner (Bedford High School), Exhibition, £20 (French).

ST. HUGH'S COLLEGE.—The following awards have been made:—A Scholarship of £25 a year for three years to P. Lovett (Mortimer House, Clifton) (History). A Scholarship of £25 a year for three years to J. L. M. Dick (St. Mary Hall, Brighton) (French). An Exhibition of £20 a year for three years to M. Dalglish (Liverpool College, Huyton) (English). An Exhibition of £20 a year for three years to R. J. Mitchell (Dorchester High School) (History).

SOMERVILLE COLLEGE.—The following awards of scholarships and exhibitions have been made:—Clothworkers' Scholarship of £60 for three years: C. Barratt (Pendleton High School, Manchester) (Classics). Coombs' Scholarship of £50 for three years: E. H. Appleyard (Municipal High School for Girls, West Hartlepool) (History). Students' Scholarship of £45 for three years: E. A. Hughes (Ladies' College, Cheltenham) (English). Exhibition of £25 for three years: A. N. Lloyd Thomas (King Edward's High School for Girls, Birmingham) (Classics). Exhibition of £25 for three years: E. D. Powell (High School, Bournemouth) (French). Exhibition of £25 for three years: M. U. Sharpe (Ladies' College, Cheltenham) (Science).

ST. KATHERINE'S, MORTIMER HOUSE, BRISTOL.—The Western Division of the Woodard Corporation have just taken over a school for girls in Clifton, known as Mortimer House. This school was founded and owned by Mrs. Meyrick Heath, and it has always been recognized by the Board of Education for efficiency. In 1913 Mrs. Heath was joined by Miss A. P. Gordon, graduate in Arts of London University and holder of the Cambridge Teacher's Diploma. On Mrs. Heath's retirement in July

The BOARD OF EDUCATION emphasizes the usefulness of local history thus:—"It is essential that in each school attention should be paid to the history of the town and district in which it is situated. All great and important events which have taken place in the neighbourhood will naturally be chosen for more detailed treatment. Several changes, such as the foundation and dissolution of the monasteries, should be illustrated by reference to the effect upon the particular district. . . . There must, in all cases, be included a study of those actually existent historical remains such as castles, city walls, monasteries, which are accessible from the school, and in connexion with this the study of the earlier periods must include some knowledge of the elements of architecture."

Two History Readers which fulfil the above conditions.

The County of the White Rose.

An Introduction to the History and Antiquities of Yorkshire.

By A. C. PRICE, M.A., formerly Scholar of Pembroke College, Oxford; Author of "Leeds and its Neighbourhood," &c.

415 pages. Crown 8vo. With upwards of 70 Illustrations and a folding map of the three Ridings. Strongly bound in cloth boards. 2s. 6d. net.

Education says:—"Much History has been made in Yorkshire, and here we get just enough about it to make us want to know more. There are chapters on the Land and its Inhabitants, from the earliest historical times down to modern Yorkshire—castles, abbeys, churches, towns, each in turn are described and illustrated. There are 383 pictures, plans, and maps. The whole book is a treasury of information and most delightful reading."

The Story of the East Riding of Yorkshire.

By HORACE B. BROWNE, M.A.

368 pages. Crown 8vo. With 170 Illustrations. Bound in Art Cloth Boards. Price 2s. 6d. net.

The School World says:—"Mr. Browne gives scarcely more than a reference to what will be found in the ordinary textbooks, and so saves space for more local details. The story is well told, geology, pre-history, architecture, all coming in for treatment, as well as the more obvious facts of social and political life."

—*Secondary Education*.

New Educational Catalogues nearly ready.

10-12 ORANGE STREET, LONDON, W.C.2.

1918, Miss Gordon became sole proprietor, and she decided to place the school under the care of the Woodard Corporation in order that the continuance of definite religious teaching in accordance with the Church of England might be ensured. The school is now to be known as St. Katherine's, Mortimer House, Clifton, Bristol, and it is hoped that under the care of the Woodard Corporation the school will find a place among those other public schools for girls carried on by them, where a good modern secondary education may be secured, combined with Church teaching. The Society have appointed Miss Gordon head mistress of St. Katherine's.

FARADAY HOUSE ELECTRICAL ENGINEERING COLLEGE.—The following appointments to entrance scholarships have been made:—To Frank D. Goodchild (County School, Beckenham), a Faraday Scholarship of fifty guineas per annum, tenable for two years in college and one year in engineering works. To George J. Moody (Alley's School, Dulwich), a Maxwell Scholarship of fifty guineas per annum, tenable for one year in college and one year in engineering works.

HUDDESFIELD TECHNICAL COLLEGE.—The Governors of the Huddersfield Technical College have received a gift of £2,000 from Mrs. Mary Blamires, widow of the late Alderman Joseph Blamires, in memory of her late husband, himself a former student and afterwards a governor of the college. The scholarship is to be used for the promotion of research in chemistry.

PRIMARY SCHOOL NOTES.

The N.U.T. Conference.

THE Jubilee Conference of the National Union of Teachers, held at Margate, was probably, in point of numbers, the most successful in its history. The presidential address, delivered by Miss Wood, of Manchester, included a summary of the history of the Union which possessed particular interest for older members. The claim that the Union had been successful in securing the abolition of half-time labour created some surprise among representatives from the industrial areas of the north, where the half-time system flourishes

as of old. The fact is that Clause VIII, Section 1, of the new Education Act is not yet in operation; the "appointed day" has not even been fixed. As an ardent advocate of the principle of equal opportunity and equal salaries for men and women doing similar work, the new president made an eloquent appeal for unity in the profession, which was cordially appreciated by the Conference. In its appeal to the material rather than the spiritual, the address was, perhaps, symbolic of the prevailing discontent in the teacherhood. Throughout the Conference could be detected the clash between the policy sanctified by tradition and the spirit which clamours for reform by the direct path; the plea for sweet reasonableness as opposed to the method of the pistol point. The position of the London teachers undoubtedly enlisted the whole-hearted sympathy of Conference, and there was a feeling that the action of a small section of these teachers had been unduly acclaimed in the press and on the platform; and while the Conference in no way condoned this action, there can be little doubt that the London teaching service and its conditions will receive an advertisement from Conference representatives which will penetrate to every part of England and Wales. As a result, it is unlikely that there will be any considerable movement of teachers to London from outside areas for a considerable period.

Conference and Lost Opportunities.

MUCH of the time of Conference was occupied in listening to the arguments of a small but efficiently organized section of it, which spoke volubly, if not forcefully, upon each and every part of the agenda which was reached. The mechanism of standing orders affords favourable opportunities either for obstructive discussion or propaganda purposes. Wearisome discussions alternating with mild scenes, the appearance on the platform of the same speakers or different speakers with the same speeches, continued throughout in monotonous sequence; finally the feeling of Conference would be expressed decisively. Teachers, after all, are very human. and excessive propaganda activity of the type referred to is calculated to injure seriously the cause it seeks to serve. If the Easter Conference is to fulfil any useful purpose, it is essential that some more satisfactory arrangement of business should be formulated, in order that representative feeling in the body of the meetings may

CLASSICS.

By Professors WALTERS and CONWAY.

LIMEN. A First Latin Book. 6th Edition. 70th thousand. **3s.**, or in Two Parts, **2s.** each. A rapid modern course, which can be used equally well for teaching in Latin or in English.

ANTE LIMEN. 2nd Edition. **2s.** A new Latin Book for Young Beginners, based upon LIMEN, and specially written for beginners in Preparatory Schools.

AD LIMEN. **3s.** A Course of Latin translation and composition, especially suitable for Public School Scholarship Candidates. It includes a series of useful Examination Papers, based Section by Section on LIMEN.

DEIGMA. A First Greek Book. **4s.** Follows the methods of LIMEN; supplies all the main requirements for a thorough grounding in the language.

INITIA GRAECA, Part I. A First Greek Course, containing Grammar, Delectus, Exercise Book, and Vocabularies. By Sir WILLIAM SMITH. New (1906) Edition. **4s.**

ENGLISH.

Based on the New Grammatical Terminology.

A NEW ENGLISH GRAMMAR. By R. B. MORGAN, M.Litt. 57th thousand. **3s.** This is an attempt to provide beginners with a thorough grounding in the elementary mechanism of their mother-tongue, before they begin the study of a foreign language.

EXERCISES IN ENGLISH GRAMMAR. By R. B. MORGAN, M.Litt. **1s. 9d.** The demand, expressed by teachers, for additional exercises of the same interesting and cheerful character as those which have helped to make the parent book so popular, has induced the author to compile this volume of exercises.

ENGLISH COMPOSITION. By E. E. KITCHENER, M.A. 23rd thousand. **2s.** To learn grammar without putting it to practical uses is of little educational value. This book is meant to be both parallel and complementary to Morgan's English Grammar.

EXERCISES IN ENGLISH COMPOSITION. By E. E. KITCHENER, M.A. **1s. 9d.** This little book has been written primarily to help those teachers who prefer to use no regular textbook.

MATTER, FORM, AND STYLE. A Manual of Practice in the Writing of English Composition, for more advanced Students. By HARDRESS O'GRADY. **2s. 6d.**

MODERN LANGUAGES.

GRAMMAIRE FRANÇAISE ÉLÉMENTAIRE AVEC EXERCICES. By W. MANSFIELD POOLE, M.A. Fourth and Revised Edition. **3s.** A sound, progressive exposition of the first principles of Grammar and Composition.

LA LANGUE FRANÇAISE. Grammaire à l'usage des classes moyennes et supérieures. By G. KESSEN BUZZA, B.A., and E. E. HURT, B.A. **3s. 6d.** This book is intended for pupils in their Third and Fourth Years of French. Especially suitable for use after Poole's "Grammaire Française Élémentaire."

A "MIDDLE METHOD" GERMAN COURSE. Reading Book and Grammar with Direct Method and Re-translation Exercises. By F. W. M. DRAPER, B.A. (Cantab.), L. es L. (University of Paris).

PRACTICAL SPANISH. A Grammar of the Spanish Language. With Exercises, Vocabularies, and Materials for Conversation. By DON FERNANDO DE ARTEAGA. 2 Parts. Part I, **4s.**; Part II, **5s.**

A SPANISH READER. With Notes and a Vocabulary. By H. C. L. BALSHAW, late Head Master of the Escuela Práctica de Guatemala. **3s. 6d.**

HISTORY.

AN INTRODUCTORY HISTORY OF ENGLAND. From the Earliest Times till the year 1815. By C. R. L. FLETCHER, M.A. With Maps. Four Volumes. **7s. 6d.** each.

LITTLE ARTHUR'S HISTORY OF ENGLAND. By LADY CALLCOTT. With additional Chapters, bringing the narrative to the end of the Reign of King Edward VII, and additional Illustrations. **2s.**

THE GOVERNMENT OF THE BRITISH EMPIRE. By EDWARD JENKS, B.C.L., M.A. Second Edition. **7s. 6d.** net. A comprehensive account of the different political institutions of our Empire, expressed in simple, untechnical language.

A GENERAL HISTORY OF EUROPE, 350-1900. By OLIVER J. THATCHER and FERDINAND SCHWILL. Revised and adapted to the requirements of English Colleges and Schools by ARTHUR HASSALL, M.A. With Bibliographies at the end of each section. With Maps, Genealogical Tables. **10s. 6d.** Or in Two Parts: Part I, THE MEDIEVAL PERIOD (350-1500). **5s. 6d.** Part II, THE MODERN PERIOD (1500-1900). **5s. 6d.**

A GENERAL HISTORY OF EUROPE, 1789-1900. Reprinted from the above book. Entirely reset. With 3 Coloured Maps. **3s.**

JOHN MURRAY, 50a ALBEMARLE STREET, LONDON, W.1.

find expression. Under existing conditions, the president is practically helpless, and it is, of course, impossible for the Executive to exercise a self-denying ordinance when attacks are made in force. In the fewness of men and especially of women speakers from the body of the hall, the Margate Conference probably established a record.

* * * * *

The Reopening of the Religious Question.

THE outstanding feature of the Conference was the reopening of the religious controversy in response to the suggestions of Mr. H. A. L. Fisher for a final settlement of the question. Under existing conditions, it is becoming clear that no extensive building programme can be entertained in connexion with the proposals of the new Education Act. On the one hand, many non-provided schools are in bad repair and suffering from a progressive decrease of average attendance; on the other, the Churches, confronted by the immediate and pressing problem of the poverty of their clergy, are unable to keep pace with the growing demand for improvements in school fabric. It is well known that many non-provided schools have the utmost difficulty in attracting teachers, owing to the depressing conditions of service. The provision of schools or extensions for the accommodation of advanced courses of instruction and central classes cannot be faced by the majority of non-provided schools. The inclination to seek a settlement upon national lines is therefore very strong at the present time. So far as the teachers are concerned there exists a similar disposition, and the decision of Conference to seek fuller information for presentation to the local associations of teachers was practically unanimous. The discussion, brief as it was, indicated a strong feeling of antagonism to any suggestion that the right of entry to Council schools should be considered. A clear body of opinion was also expressed against the continuance of denominational tests for church teachers.

* * * * *

Books and Apparatus.

AN inspection of the Publishers' Exhibition at Margate shows that a few leading houses have already begun the task of reconstructing the supply of school books and apparatus called for by the lessons of the war and the provisions of the new Education Act. During the last six years the schools have been carried on

mainly by means of old stock and renewals of this from time to time. Publishers and teachers have doubtless been waiting for the emergence of more normal prices before entertaining the idea of publishing or purchasing new books and supplies. The steady increase in the price of raw materials, however, makes it clear that school requisitions will have to be based upon considerably higher allowances for the future. The experience of the war has shown the necessity of a drastic revision of the traditional methods of teaching history in the schools; the new boundaries and grouping of nations will involve greater concentration upon the social and economic aspects in teaching geography; English readers will require a more generous recognition of world literature. Owing to the constant alterations in the postal and international rates of exchange and the upward sweep in prices, it is extraordinarily difficult to teach practical arithmetic from any current textbooks, yet new schemes are urgently required in most schools. In view of the impossibility of carrying on much longer with old stocks, it would be a great advantage to school work if some agreed course of action could be temporarily recommended by sub-committees composed of representatives of the Board of Education, local education authorities, publishers, and teachers.

CORRESPONDENCE.

THE NEW SYLLABUS OF PHYSICAL TRAINING, 1919.

To the Editors of The Journal of Education and School World.

SIRS.—The new Syllabus of Physical Training is a confession of the failure of the Swedish system in elementary schools. Though this syllabus still professes to be based on the Swedish system it might more truly be described as the *negation* of that system. It is obvious that the syllabus of 1909 has failed to interest the children and produce the results claimed for it, and that this new one is a frenzied effort to propitiate the children, for, as it states in the introduction, "As far as possible the formal nature of the lessons has been reduced to a minimum and every effort has been made to render them enjoyable and recreative."

H. F. W. DEANE & SONS THE YEAR BOOK PRESS Ltd., 31 Museum Street, LONDON, W.C.1.			

It is suggested that not less than half the lesson should be devoted to active free movements including games and dancing."

This opinion expresses the antithesis of the Swedish system, whose essence is formality and exactness of execution, and on examining the tables the majority of the exercises could certainly be described as "play," for even in the most advanced tables such formal exercises as there are, are so easy that they would be play to children of thirteen who had been learning from the age of seven.

Another principle of the Swedish system is the strict "order of movement" which claims to be founded on physiological laws. This order has been considerably changed—the milder "introductions" appear to be omitted and each table starts with violent movement—i.e. a minute's run followed by another running or jumping exercise. The wisdom of this change for children, among whom there must be many weaklings, is extremely doubtful. "Activity" exercises, instead of occupying about one tenth of the table, now occupy considerably more than half, and although a change in moderation in this direction is welcome, this is rushing to the other extreme.

The aims of physical training are four: it should produce beneficial anatomical, functional, mental, and moral effects, but nearly the whole of this syllabus concentrates on the functional. Corrective and developmental exercises occupy a subordinate place, and as regards mental results there is little to educate the brain-centres connected with bodily movements. Control, co-ordination, and concentration cannot be promoted by simple automatic movements, any more than the brain-centres controlling intellectual powers can be educated by lessons suited to the infant school.

Whilst the new syllabus is distinctly more amusing, it is far less educative than the old; it uses throughout methods which are suited to children under seven; there is not a table in the book that could not be executed properly and without undue mental strain by a child of eleven who had been learning for three or four years, so that for the last three years of school life the children are given work far below their normal powers—the education of their bodies is not keeping pace with that of their minds. It seems a pity that the authorities should know of no other way of mitigating the dryness of Swedish drill and of enlivening the short twenty minutes given to physical training than by substituting for it games and dancing, more especially when there is an interesting, entertaining, and, at the same time, educational British system ready to hand. It supplies exactly what the Swedish lacks—i.e. variety, interest, and progression in degrees of complexity—whilst at the same time remaining methodical and exact. It is truly educational since it aids the psychological development of the child whose brain gradually becomes adapted to more complex movements.

The value of games is inestimable, but they should not usurp the place of formal physical training which is needed for the correction of defects of posture and physique, the even development of both sides of the body, the gradual strengthening of those who are delicate and weak, and also for discipline.—Yours, &c.,

A TEACHER OF THE BRITISH SYSTEM.

3 ADAM ST., ADELPHI, W.C.2.

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, Feb. 29, 1912.)

THE Teachers Council was formed at the special desire of the teachers of the country. This desire was expressed through the various Associations and Societies of Teachers. It is clearly formulated in the following extracts from the Objects of the National Union of Teachers:—

“To secure the compilation of a comprehensive Register of Teachers.”

“To secure the solidarity and extend the influence of the Teaching Profession.”

The aims thus set forth are sought by teachers of all types. Solidarity can be attained only by the unification of the teaching profession, and of this unification the Official Register of Teachers is the outward symbol. Teachers who are qualified for Registration should therefore become Registered without delay in order to show that they are loyal to the best interests of their calling and prepared to do their share in extending the influence of their profession.

The Teachers Council is a representative body composed entirely of teachers who are chosen by Associations and Societies of Teachers. No fewer than 42 such bodies are represented on the Council, in addition to the Staffs of eleven Universities.

It began the compilation of an Official Register of Teachers early in 1914, and in spite of the grave handicap imposed by the War, the number of applicants for Registration is now

36,500

The Council has been able to bring together the views of teachers of all types, and while not attempting to control the policy of any section or association, it has undoubtedly done much to foster united action and harmony of purpose, and to lay the foundations of a real profession.

The Council desires to make known to all

UNREGISTERED TEACHERS

that

1. The full CONDITIONS OF REGISTRATION will come into force at the beginning of the year 1921. Up to 31st December, 1920, teachers may be admitted to Registration on proof of EXPERIENCE ALONE, under conditions satisfactory to the Council. After that date proof of ATTAINMENTS and PROFESSIONAL TRAINING will be required.
2. The OFFICIAL LIST OF REGISTERED TEACHERS is now being revised. Entries for the Revised List will close on WEDNESDAY, 30th JUNE, 1920.
3. On and after the same date, WEDNESDAY, 30th June next, the uniform fee for Registration will be TWO POUNDS, instead of ONE GUINEA as at present.

Teachers who are not already Registered should complete the form below and post it without delay to the offices of the Council.

To the SECRETARY, TEACHERS REGISTRATION COUNCIL,
47 Bedford Square, LONDON, W.C.1.

PATON'S LIST of SCHOOLS and TUTORS

23rd ANNUAL EDITION NOW PREPARING.

An Aid to Parents in the Selection of Schools.

EVERY YEAR THOUSANDS OF PARENTS
CONSULT THIS BOOK.

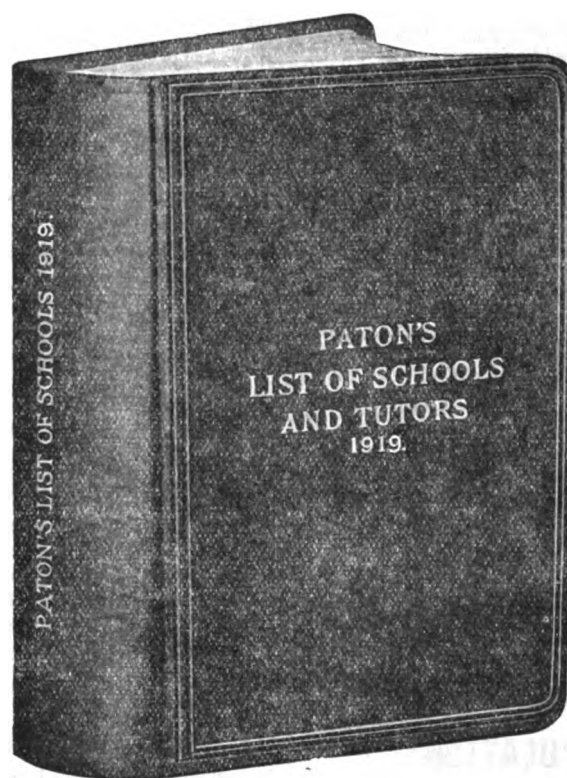

Dear Mr. Paton,

I shall be much obliged if you will insert my adv. again in your List of Schools. At any price it is cheap, for I know I get many more pupils than I can trace from your List. I know have you to thank for the prosperity of my school.

March 26th, 1920.

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, one boy. Then I came under your Agency—result, a steady stream of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding-house."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term four pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

Specimen Copy and full particulars sent free
of charge to Head Masters and Head Mistresses.

PRIZE COMPETITIONS.

THE prize for the April competition is divided between "Mitis et Fortis" and "Agricola."

The winner of the March competition is Mr. Burnell Payne, 20 Harcourt Terrace, S.W.10.

THE SLEEPER IN THE GLEN.

A verdant hollow, where a singing stream
 Leaves wantonly on every blade of grass
 Shreds of her silver garment, gleaming bright
 Where'er the sunlight from the proud hill-tops
 Glances upon them. 'Tis a little glen
 Sparkling with sunbeams.

Here, with parted lips
 And head uncovered, a young soldier sleeps,
 The cool green cross his pillow, and the grass
 His couch, beneath the clouds. How pale he seems
 In his green bed on which the light streams down!

His feet amidst gladioli, he sleeps—
 Slumbers and smiles, as a sick child might smile.
 Cradle him warmly, Nature; he is cold!

The scents arouse in him no pulse of joy.
 He sleeps i' the sun, his hand upon his breast,
 In peace. In his right side two red holes yawn.

MITIS ET FORTIS.

By "AGRICOLA."

A grassy dell through which a streamlet sings,
 Leaving a fringe of silver on the sedges;
 A little glen wherein the sunlight flings
 Soft, filmy vapours o'er the mountain edges.

A soldier sleeps there: open-mouthed he lies,
 His bare head low in cool blue-flowered cresses,
 Stretched on the grass beneath the summer skies,
 Pale on his bed of green. The sun caresses

His feet among the iris leaves, and sleeping
 He smiles as do sick children, tired with weeping.
 Cradle him warmly, Nature; he is cold.

No scent of flowers can make his nostrils quiver,
 With hand on breast he sleeps beside the river,
 Two spots of red within his doublet's fold.

Our own preference is for the version by "Mitis et Fortis" because it is closer to the original, and the simplicity of its form and language seems to reproduce more perfectly the spirit of the French, while, as rhyme is to us the element in verse that is most easily dispensed with, its absence causes no jar. But we recognize that this is a matter of personal taste, and that by many of our readers a translation in sonnet form would be considered a better work of art. Hence we decided to place the two versions on a level. "Agricola" deserves great credit for the plainness and straightforwardness of his diction, the absence of any poetic trickery, and his skilful alternation of double and single rhymes. In the version of "Mitis et Fortis" the eleventh line is a blot. "Gladioli" is really impossible in verse, and the whole line "hobbles"; the substitution of "the iris-flowers" would have made all the difference. The versions of "Rusticus Expectans" and "Alleluia" were graceful, but not such faithful reproductions of the French as the prize versions. "Noëmi" sent in a dainty

THE ROYAL NAVAL COLLEGE,
OSBORNE

For information relating to the entry of Cadets, Parents and Guardians should write for "How to become a Naval Officer" (with an Introduction by Admiral the Hon. Sir E. R. FREMANTLE, G.C.B., C.M.G.), containing an illustrated description of life at the Royal Naval Colleges, at Osborne and Dartmouth, post free on application to GIEVES, Limited, 21 Old Bond Street, London, W.1.

Special Entry of Naval Cadets.

The Secretary of the Admiralty announces that the scheme of Special Entry to Naval Cadetships, which was instituted in 1913 will be further continued. The examinations are held annually in June, and candidates are required to be not more than 18½, nor less than 17½, years of age on July 1st.

Regulations can be obtained on application to

GIEVES, Limited,

"ROYAL NAVY HOUSE," 21 Old Bond Street,
 LONDON, W.1.

prose version. Several verse translations were spoilt by a bad choice of metre, as, for instance, "In a little green hollow where murmurs the stream." This strikes the wrong note. There were thirty-four verse translations.

We regret that, by an unconscious act of plagiarism, we chose the same piece as was set by *Modern Languages* last October. Our readers, however, may find it of some interest to compare our prize versions with that of our contemporary.

We classify the 80 versions received as follows:—

Class I.—(a) Mitis et Fortis, Agricola, Alleluia, Mumu, Rusticus Exspectans, Noëmi, Paulus, E.S.B., Homunculus, Savilian.

(b) Erindale, Ted, Katty Ann, A.M.E., Iambus, E.T.C.P., Bésigue, Hibernia, Tigris, Wyoming, Calvus, I.S., Hieremoth, Undergraduate, Poetaster, Zephyr, Esse quam videri, Borderer.

Class II.—Le Corbeau, Chingleput, Mimi, Pensée, Florah, Will-o'-the-Wisp, στέφανος, A.E.C., Desdemona, Q.C., I.B.W., Em, Durdatha, St. Michael, J.S.L., Gregory, Haillons, Pentewan, Johnny, Amon, Old Times, Caesar, F.T.D., Carisbrooke, Ala, Chymny, X.Y.Z., Bobby, Cornish Maid, A.L.O.I., Sirach, Mari-rosa, Fishy, Umbria, Aberdonia, W.W.M., K.E.L., Ray, νέρος.

Class III.—Virginie, Fifi, A.M.B., Trethowal, R.R.H., Jimmy, Languidiora, F.C.H.J., Inowracław, Puella, Tregonissey, Kismet.

A Prize of Two Guineas is offered for the best translation of the following extract from Victor Hugo's "Pyrénées":—

Le grès est la pierre la plus amusante et la plus étrangement pétrie qu'il y ait. Il est parmi les rochers ce que l'orme est parmi les arbres. Pas d'apparence qu'il ne prenne, pas de caprice qu'il n'ait, pas de rêve qu'il ne réalise; il a toutes les figures, il fait toutes les grimaces. Il semble animé d'un âme multiple. Pardonnez-moi ce mot à propos de cette chose.

Dans le grand drame du paysage, le grès joue le rôle fantasque; quelquefois grand et sévère, quelquefois bouffon; il se penche comme un lutteur, il se pelotonne comme un clown; il est éponge, pudding, tente, cabane, souche d'arbre; il apparaît dans un champ parmi l'herbe à fleur de sol par petites bosses fauves et flocon-

neuses et il imite un troupeau de moutons endormi; il a des visages qui rient, des yeux qui regardent, des mâchoires qui semblent mordre et brouter la fougère; il saisit les broussailles comme un poing de géant qui sort de terre brusquement.

Une plaine semée d'ormes n'est jamais ennuyeuse, une montagne de grès est toujours pleine de surprise et d'intérêt. Toutes les fois que la nature morte semble vivre, elle nous émeut d'une émotion étrange.

Avez-vous remarqué, à la tombée de la nuit, sur nos grandes routes des environs de Paris, les profils monstrueux et surnaturels de tous les ormes que le galop de la voiture fait successivement paraître et disparaître devant vous? Les uns baillent, les autres se tordent vers le ciel et ouvrent une gueule qui hurle affreusement. Il y en a qui rient d'un rire farouche et hideux, propre aux ténèbres; le vent les agite; ils se renversent en arrière avec des contorsions de damnés, ou se penchent les uns vers les autres et se disent tout bas dans leurs vastes oreilles de feuillages des paroles dont vous entendez en passant je ne sais quelles syllabes bizarres. Il y en a qui ont des sourcils démesurés, des nez ridicules, des coiffures ébouriffées, des perruques formidables; cela n'ôte rien à ce qu'a de redoutable et de lugubre leur réalité fantastique; ce sont des caricatures, mais ce sont des spectres; quelques-uns sont grotesques, tous sont terribles. Le rêveur croit voir se ranger au bord de la route en files menaçantes et difformes et se pencher sur son passage les larves inconnues et possibles de la nuit.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on May 14, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

ST. GEORGE'S SCHOOL FOR GIRLS (Incorporated), EDINBURGH.**APPOINTMENT OF HEAD MISTRESS.**

Owing to the resignation of Miss Stevenson on her appointment as District Inspector of Schools under the London County Council, the Council of St. George's School invite applications for the post of HEAD MISTRESS, which will be vacant in September. Candidates must hold a University degree or a Certificate from the University of Oxford or Cambridge equivalent to a degree, and must have had suitable experience in the work and organization of a Secondary School, and have taken a course of professional training for Secondary School work. Salary £650, rising by annual increments of £25 to £800.

Forms of application may be obtained (by letter only) from Miss ELIZABETH B. MITCHELL, Hon. Secretary, St. George's School for Girls, Murrayfield, Edinburgh, to whom applications and testimonials should be forwarded before 17th May, 1920.

COUNTY HIGH SCHOOL, ILFORD.

Required a MASTER, to be responsible for Geographical work throughout the School. Graduate. Commencing salary £200 to £275, according to experience and qualifications. Increments and maximum according to County scale (Grade I).

Applications to be made on forms to be obtained by sending stamped addressed foolscap envelope to the CLERK TO THE GOVERNORS.

CORK HIGH SCHOOL.—Wanted, in September, ASSISTANT MISTRESS to teach French. Apply, stating age, salary, experience, subsidiary subjects, to HEAD MISTRESS.

Posts Vacant—continued.**COUNTY BOROUGH OF SOUTHPORT.****SECONDARY SCHOOL FOR BOYS.**

Head Master: G. A. MILLWARD, Esq., M.A.

The Governors of the above School invite applications from ASSISTANT MASTERS for a new Secondary School for Boys, which it is proposed to commence in temporary premises in September next at the Woodlands, Lord Street, pending the erection of a new School with accommodation for 500 boys, which is to be proceeded with immediately on a site of 15 acres on the Sea Front.

It is intended that the School shall be conducted as far as possible after the manner of a Public School for Day Boarders, for which purpose the new School Buildings have been specially designed, and it is therefore desirable that some of the Candidates should have had Public School experience. They should be qualified to teach one or more of the following subjects:—English, History, Geography, Mathematics, Science, and French.

Initial salary, according to qualifications and experience, within the limits £200 to not less than £450.

Forms of application may be obtained from the undersigned, and should be returned not later than 22nd May, 1920.

WM. ALLANACH,

Correspondent and Director of Education.

Education Offices,
2 Church Street, Southport.

Posts Vacant—continued.**BARNESLEY COUNTY**
BOROUGH COUNCIL.APPOINTMENT OF DIRECTOR OF
EDUCATION.

The Education Committee invite applications for the post of Director of Education for the Borough.

The gentleman appointed will be required to advise the Education Committee on all matters pertaining to the administration of Higher and Elementary Education within the Borough, to act as the Committee's Chief Executive Officer, and to be responsible for the superintendence and control of the Committee's administrative and executive office staff.

Other things being equal, preference will be given to candidates with good University qualifications, teaching experience, and who have had previous experience in connection with the administration of both Higher and Elementary Education.

Commencing salary £700 per annum, which will be deemed to include all War Bonuses granted to employees up to the time of appointment.

Canvassing members of the Council, either directly or indirectly, will be considered a disqualification.

Applications, accompanied by copies of three recent testimonials, should be sent to the undersigned, not later than May 8th, 1920, endorsed "Director of Education."

To ASSISTANT MASTERS
ASSISTANT MISTRESSES
LADY MATRONS

¶ Candidates seeking appointments in Public or Private Secondary or Preparatory Schools at home or abroad should apply to

Truman & Knightley
—SCHOLASTIC AGENTS—LTD—

who already have a large number of SEPTEMBER vacancies on their books.

¶ There is a great demand for both Assistant Masters and Assistant Mistresses, and serious efforts are being made to render the prospects in the teaching profession more attractive and equal to those in other professions.

¶ In addition to the large number of appointments open to University men and women in Public Schools where the remuneration is being fixed on improved scales, there are many vacancies in Preparatory Schools where young University men without previous experience can command commencing salaries ranging from £120 to £200 a year or more, according to their degrees, in addition to board and residence in term time.

¶ There are many openings for University women, and also for those with Higher Local or other good certificates interested in children and in teaching, in high class private schools for girls, where the conditions are pleasant, the hours not excessive, and salaries range from £80 to £200 or more, with board and residence, according to age, qualifications, and experience.

¶ There are also vacancies for House Mistresses, Lady Housekeepers, and Matrons in schools at salaries ranging from £60 to £100 or more per annum, with board and residence.

¶ THERE IS NO CHARGE FOR REGISTRATION. The requirements of each applicant receive careful consideration and attention, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

University Tutorial Press.

SELECTED :: EDUCATIONAL :: BOOKS.

Languages, History, & Geography.

Junior English Grammar with Parsing and Analysis. By A. M. WALMSLEY, M.A. *Second Edition, Revised.* 2s.

Based mainly on inductive methods. The recommendations of the Joint Committee on Grammatical Terminology have been completely adopted throughout.

The Matriculation English Course. By W. H. LOW, M.A., and JOHN BRIGGS, M.A. *Third Edition.* 4s. 6d.

A graduated course in English grammar, composition, and précis-writing.

An Anthology of English Verse. For use in Schools and Colleges. With an Introduction and a Glossary. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. *Second Edition.* 3s. 6d.

A selection of the best in all branches of English poetry, except the dramatic, from Wyatt to Swinburne.

The Tutorial History of English Literature. By A. J. WYATT, M.A. *Third Edition, continued to the present time.* 3s. 6d.

Attention is devoted to the important aspects of the work of the chief English authors, while tracing the development of our literature.

A Social History of England. By FREDERICK BRADSHAW, D.Sc., M.A. 5s.

An elementary account for colleges and upper forms in schools of the social and economic development of England.

Textbook of Geography. By G. C. FRY, M.Sc. *Second Edition, Revised and Enlarged.* 5s. 6d.

For the middle and upper forms of schools. Stress is laid on the inter-connexion of Physical Geography and Political Geography.

New Junior French Course. By G. A. ROBERTS, M.A. 3s. 6d.

A year's course in Reading, Grammar, and Translation into French, with material for oral practice, for use in the junior and middle forms of schools.

Direct French Course. By H. J. CHAYTOR, M.A. 2s. With Vocabulary French-English. 2s. 9d.

This book is designed for use by pupils of 12 or 13 years of age who are commencing the study of French.

French Essays, Matriculation. By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 2s.

A carefully graduated course in Free Composition in French.

Botany and Nature Study.

The Senior Botany. By FRANCIS CAVERS, D.Sc. *Second Edition.* 5s. 6d.

A school course of Botany in which great stress is laid on outdoor and indoor observation and experiment.

Junior Botany. By FRANCIS CAVERS, D.Sc. 3s. 6d.

Suitable for use in Junior forms: encourages observation and experiment on living plants, and the study of adaptation to environment.

Textbook of Botany. By J. M. LOWSON, M.A., B.Sc., F.L.S. *Fifth Edition, Revised and Enlarged.* 3s. 6d.

The standard is that usually required for University Intermediate Examinations. The chief aims are simplicity and clearness of statement as regards both facts and principles.

A First Course in Plant and Animal Biology. By W. S. FURNEAUX. 2s. 9d.

The object of this book is to provide young beginners with a course of Nature Study closely in touch with scientific methods.

Life Histories of Common Plants. By FRANCIS CAVERS, D.Sc. 4s.

The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

Practical Botany. By FRANCIS CAVERS, D.Sc. *Second Edition.* 5s. 6d.

In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant Substances.

School Gardening, with a Guide to Horticulture. By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. With numerous illustrations and plans. 3s. 6d.

This book affords teachers sound guidance in the correct methods of teaching this subject and of organizing the classes.

Mathematics and Physics.

The School Arithmetic. By W. P. WORKMAN, M.A., B.Sc. *Second Edition.* (With or without Answers.) 4s. 6d.

Those portions of *The Tutorial Arithmetic* dealing with the higher theory and all over-difficult problems are omitted.

Rural Arithmetic. By A. G. RUSTON, B.A., B.Sc., Science Tutor in the Department of Agriculture at the University of Leeds. 4s. 6d.

Specially suitable for use in secondary rural schools working under the schemes of the Boards of Education and Agriculture.

School Algebra. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers. 7s.

A course of Algebra as far as the binomial theorem for positive integral indices suitable for upper forms.

The School Geometry. By W. B. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. Covers the subject matter of Euclid I-VI. *Second Edition, Enlarged.* 5s.

Suitable for the Senior Local and School Certificate Examinations.

Magnetism and Electricity, Intermediate Textbook of. By R. W. HUTCHINSON, M.Sc., A.M.I.E.E., F.R.G.S. 3s. 6d.

A course, both theoretical and practical, up to the standard of University Intermediate Examinations. Embodies the distinctive results of modern research.

Junior Experimental Science. By W. M. HOOTON, M.A., M.Sc., F.I.C. *Second Edition.* 3s. 6d.

A two years' course Physics and Chemistry, which students may commence when about thirteen years of age.

Senior Chemistry. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. *Second Edition.* 5s. 6d.

A theoretical textbook for Upper Forms of schools, illustrated by a large number of experiments.

Junior Chemistry. By R. H. ADIE, M.A., B.Sc., Lecturer in Chemistry, St. John's College, Cambridge. *Second Edition.* 3s. 6d.

A two years' course of work for beginners.

Education.

Principles and Methods of Teaching. By JAMES WELTON, D.Lit., M.A., late Professor of Education in the University of Leeds. *Second Edition, Revised and Enlarged.* 7s. 6d.

In this work the treatment is theoretical in the sense of setting forth a consistent body of doctrine. But that the principles and methods here set forth are practical has been proved by the successful working of them in school.

Teaching: Its Nature and Varieties. By BENJAMIN DUMVILLE, M.A., F.C.P., late Master of Method and Lecturer on Education in the Islington Day Training College. 5s. 6d.

An analysis of the processes of teaching as they occur in all subjects. The author examines the nature of the teaching itself, showing why certain methods should be employed.

Principles and Methods of Moral Training with Special Reference to School Discipline. By JAMES WELTON, D.Lit., M.A., and F. G. BLANDFORD, M.A., Lecturer in Education in the Cambridge University Training College. 4s. 6d.

This work treats of the general nature of good character—duty, virtue, conscience; of the school as a moral community in which good character is developed, &c.

Psychology, Experimental, in relation to Education, An Introduction to. By C. W. VALENTINE, D.Phil., M.A. 3s. 6d.

An Introductory Course in Experimental Psychology as applied to Education, for the use of Teachers and Students in Training Colleges.

Textbook of Hygiene for Teachers. By R. A. LYSTER, M.D., B.Sc., D.P.H., Medical Officer of Health for Hampshire, and Chief Medical Officer to the Education Committee. 5s. 6d.

School Organization. By S. E. BRAY, M.A., Inspector of Schools to the London County Council. With a chapter on "The Place of the Elementary School in a National System of Education," by Sir J. H. VOYALL. *Second Edition.* 4s.

Complete Educational Catalogue, and Catalogue of Class Books for Secondary Schools, post free on application.

University Tutorial Press, Ltd., High Street, New Oxford Street, London, W.C.2.

MAY 1, 1920.

Cambridge University Press

Cambridge Readings in Literature.

Edited by GEORGE SAMPSON. In five books, illustrated with reproductions of famous pictures. School edition. Book I, 3s 6d net, or in 2 parts, 2s net each; Book II, 3s 6d net, or in 2 parts, 2s 3d net each; Book III, 3s 6d net; Books IV and V, 4s net each.

"We have never seen more delightful books of their kind and we predict that they will receive the most cordial of welcomes from teachers of English."—*The Scottish Educational Journal*

"If those boys and girls who are privileged at school to go through the five volumes of *Cambridge Readings* do not begin to enjoy and love books and to form unconsciously a taste for what is really good in literature—well, we despair of them, and the fault will not be Mr. Sampson's."—*The Literary World*

Cambridge Readings in French Literature.

Edited by ARTHUR TILLEY. Crown 8vo. With 24 plates. 8s net

Besides the general aim of presenting a variety of extracts good in themselves and interesting for their subject-matter, it has been the particular aim of the present selection to illustrate the history of France by a record of some of her famous sons.

Cambridge Readings in Italian Literature.

Edited by EDWARD BULLOUGH, M.A., Fellow of Gonville and Caius College, Cambridge. Crown 8vo. 8s net

"The very thing that many English people have long needed; namely, a guide to the best Italian authors of the nineteenth century. . . . Under Mr. Bullough's guidance the English student of Italian need never be in doubt as to what to read."—*The Spectator*

A Short Italian Dictionary.

By ALFRED HOARE, M.A. Demy 8vo. Vol. I, Italian-English, 9s net; Vol. II, English-Italian, 7s 6d net. Vols. I and II bound together, 16s 6d net; india-paper edition, 17s 6d net

"May be heartily recommended as far and away the best portable dictionary of Italian we have met with."—*The Saturday Review*

Inter Lilia.

By A. B. RAMSAY, Lower Master of Eton College. Crown 8vo. 6s 6d net

"It is difficult in a short note to convey the charm of the verses—nearly all Latin, with a few Greek and English—in this little book. . . . To Etonians it will appeal infallibly for personal and local reasons, though many others, it is to be hoped, will be able to appreciate the scholarship; for Mr Ramsay has a true vein of poetry in him, and his Latin, easy, concise, and lucid, has a distinction of its own."—*The Times*

Coleridge and Wordsworth.

Coleridge's *Biographia Literaria* (Chapters I-IV, XIV-XXII) and Wordsworth's Prefaces and Essays on Poetry. Edited by GEORGE SAMPSON, with an Introductory Essay by Sir ARTHUR QUILLER-ROUCH. Crown 8vo. 10s net

An Anglo-Saxon Reader.

Edited, with notes and glossary, by ALFRED J. WYATT. Demy 8vo. 12s 6d net

"Mr Wyatt's anthology of Anglo-Saxon poetry and prose is an excellent piece of work. It is much more varied than the older books of the kind. The notes are abundant, and the glossary, filling nearly 80 pages, would help the mere beginner to read the texts."—*The Spectator*

Haggai and Zechariah.

By the Rev. T. W. CRAFER, D.D. Fcap 8vo. 3s net. Revised Version for Schools Series.

Plane Trigonometry for Secondary Schools.

By C. DAVISON, Sc.D. Crown 8vo. 6s 6d net

"The first sixteen chapters of this book include the ordinary course of elementary Trigonometry, while the remaining four deal with de Moivre's Theorem, series, &c. The book is well up to the standard set by the author in his well-known textbooks of algebra and geometry."—*The A.M.A.*

The Theory of the Imaginary in Geometry,

together with the Trigonometry of the Imaginary. By J. L. S. HATTON, M.A. Royal 8vo. 18s net

Those who approach the subject with an open mind will, it is believed, find in this work a consistent and natural theory of the imaginary. The theory set forth in it may be regarded from the analytical point of view as an exposition of the oft-quoted, but seldom explained, "Principle of Continuity."

An Elementary Course of Infinitesimal Calculus.

By H. LAMB, Sc.D., F.R.S. Third edition. Demy 8vo. 20s net

"The third edition (the second was three times reprinted) of Professor Lamb's important treatise, in which general principles are amply illustrated by most helpful examples on every page."—*The Times*

Advanced Lecture Notes on Light.

By J. R. ECCLES, M.A., Head Master of Gresham's School, Holt. Crown 4to. 7s 6d net

"Deals successfully with Rainbows, Magnifying Power, Chromatic Aberration, Spherical Aberration, the Wave Theory of Light, Interference, Diffraction, and the Polarization of Light. The subject is well handled, and the volume will be found most useful by Science Masters and advanced students of the subject."—*The English Mechanic*

Practical Exercises on the Weather and Climate

of the British Isles and North-West Europe. By W. F. STACEY, F.R.G.S., F.R.Met.Soc. Crown 8vo. 2s 6d net

"Teachers of geography should find this carefully thought-out work of great assistance."—*Science Progress*

"We have no hesitation in recommending this book as one of the best of its kind."—*The Scottish Educational Journal*

The Study of the Weather.

By E. H. CHAPMAN, M.A., D.Sc., F.R.Met.Soc. Large crown 8vo. With 56 maps and illustrations. 4s net. Cambridge Nature Study Series.

"By understanding the weather," writes the editor of this valuable book, "we may hope to make the best of it." . . . So Mr Chapman has given to schoolfolk and others a series of practical exercises on weather study. . . . The book is full of charm."—*The Times*

"For school use this is, without doubt, the best book yet published on the subject."—*The Journal of Education*

A Field and Laboratory Guide in Physical Nature-Study.

By E. R. DOWNING. Square 8vo, with blank pages interleaved, and containing 15 text figures. 6s net. University of Chicago Press.

Botany.

A textbook for Senior Students. By D. THODAY, M.A. Revised and enlarged edition. Large crown 8vo. With 230 figures. 7s 6d net

"It would be difficult to speak too highly of this admirable handbook. It is clear and concise without being dry. . . . The illustrations are beautiful and worthy of much study."—*Education on the First Edition*

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

SCIENCE.

A FIRST COURSE IN PHYSICS

By R. A. MILLIKAN and H. G. GALE. 12mo, cloth. 428 pages. Illustrated. 6s. 6d. net.

This book outlines a general course covering the whole range of physics—a course in which the human interest is kept in the foreground, and in which emphasis is placed upon the applications of physics in modern life. In approaching their subject the authors have abandoned the didactic method, preferring to develop physical principles inductively from the consideration of some simple experiment or well-known phenomenon, and to insert definitions only after the student has seen them worked out in practice. By a logical arrangement of subject-matter, questions, and problems, he is then led to group the apparently disconnected facts of physics about great underlying principles, and thus to regard the science, not as an unrelated mass of facts, but as a logical development of a connected body of information—the fruit of centuries of experiment and research.

The volume contains an unusual number of illustrations and explanations of such present-day applications of physics as the diving suit, the Yale lock, the locomotive, the turbine, the telegraph, the dynamo, the phonograph, the transmitting and receiving apparatus for wireless telegraphy, and, in addition, portraits and biographical details of eminent physicists, as well as many historical paragraphs.

ELEMENTS OF GENERAL SCIENCE

By O. W. CALDWELL and W. L. EIKENBERRY. 8vo, cloth. xii + 404 pages. Illustrated. 6s. net.

This volume presents an introductory course covering the whole range of science. The topics discussed are grouped under six major headings: I, The Air; II, Water and its Uses; III, Work, Energy, and Electricity; IV, The Earth in Relation to other Astronomical Bodies; V, The Earth's Crust; VI, Life upon the Earth. The book contains much material relating to the applications of science in modern life, and numerous illustrations, many of them of the "how it works" type. At the same time it accords adequate treatment to the formal aspects of the subject, and will, it is believed, lead the student to acquire those habits of accuracy and the spirit of investigation which make the subsequent study of the various branches of science both more profitable and more interesting.

A FIRST COURSE OF CHEMISTRY

By W. MCPHERSON and W. E. HENDERSON. 12mo, cloth. x + 461 pages. Illustrated. 6s. 6d. net.

This book is intended primarily for those students beginning chemistry whose study of the subject will cease when they leave the secondary school, though it also furnishes a thorough foundation for those who intend to specialize in the science. The theoretical portions of the subject are developed briefly and as a natural outcome of the facts already presented, emphasis being placed wherever possible on the applications of chemistry to metallurgy, manufacture, agriculture, household chemistry, and sanitation. The book contains many interesting illustrations of these applications, as well as seventeen portraits of those who have been prominent in the field of chemical science.

FIRST STUDIES IN PLANT LIFE

By G. F. ATKINSON. Edited for the Use of English Schools by E. M. WOOD. 12mo, cloth. 266 pages. Illustrated. 3s. 6d. net.

A scientific introduction to botany for junior forms which, wherever possible, treats the reader as an investigator, and leads him, through the medium of his own experiments and observations, to acquire a knowledge of the functions of the various parts of the plant and of the factors which determine its life and growth.

The book is divided into five parts: I, The Growth and Parts of Plants; II, The Work of Plants; III, The Behaviour of Plants; IV, Life Stories of Plants; V, Battles of Plants in the World, and is well illustrated with drawings and plates.

PHYSICAL GEOGRAPHY

By W. M. DAVIS and W. H. SNYDER. 12mo, cloth. 428 pages. Illustrated. 6s. 6d. net.

The main feature of this book is the consideration of the earth and of physical phenomena in their relation to man and to man's life and work. The Earth as a Globe, The Atmosphere, The Oceans, and the Lands are all treated, the greatest amount of space being given to the subject under the last heading. The simpler land forms are described; and the products characteristic of these, together with the control they exert over the location of settlements and the distribution of industries, are directly associated with the forms themselves in order to emphasize their human relations. The book contains more than 250 illustrations.

PRACTICAL EXERCISES IN PHYSICAL GEOGRAPHY

By W. M. DAVIS. Atlas. 45 plates. 2s. net. Text. 148 pages. 3s. net.

These two books provide a series of exercises either to precede or follow, step by step, the study of a textbook. They are planned to give students an intelligent comprehension of the physical aspects of land, ocean, and atmosphere, by leading them to form their own conclusions from a practical application of their knowledge. The exercises include Valley Systems of the Lands, Coastal Plains, Distribution of Temperature, Winds of the World and Ocean Currents. Many sub-topics are treated under each exercise.

GINN AND COMPANY

Please note change of address to

7 QUEEN SQUARE, SOUTHAMPTON ROW, LONDON, W.C.1.

The new premises include a library and reading room, wherein are exhibited copies of all Ginn and Company's publications. Members of the teaching profession and others interested are cordially invited to call and inspect these. The publishers are always glad to forward books "on approval" to teachers.

FROM

PITMAN'S

LIST.

ART CLASSES.**Drawing and Design.**

By SAMUEL CLEGG.

A school course in Composition. Lettering and pen-and-ink drawing are included, and a special feature of the book is coloured plates printed by scholars from wood-blocks of their own making and designing. Profusely illustrated. **12s. 6d. net.**

The Art of Painting in Pastel.

By J. LITTLEJOHN, R.B.A., and L. RICHMOND, R.B.A.

With a frontispiece and foreword by Frank Brangwyn, R.A. With 40 full-page coloured plates and 15 other illustrations. **15s. net.**

The Teaching of Colour.

By H. A. RANKIN.

Deals in an original way with colour problems, especially in the observational exercises, in as simple a manner as possible. With 55 beautiful plates in colour and black and white. **6s. net.**

Simple Art Applied to Handwork.

By H. A. RANKIN and F. H. BROWN, A.R.C.A. (Lond.).

Vol. I contains sections on Brushwork, Designs, Stencilling, and Lettering. Vol. II deals with Wood Shapes, Staining, Inlaying, the Use of Rails, Indented Work, Leather Work, Metal Work, &c. In two Vols., profusely illustrated, each **6s. net.**

Elementary Embroidery.

By MARY SYMONDS (Mrs. G. Antrobus).

The object of this book is to give sufficient knowledge of Embroidery to enable the student to become an expert from both the artistic and commercial points of view. Foolscap 4to, with 103 illustrations in red and black. **4s. 6d. net.**

Embroidery and Design.

By JOAN H. DREW.

"With the help of this volume, even the teacher who has no special training in Art Needlework, but who is willing to work intelligently and industriously under guidance, should produce good results and teach her pupil something of the pleasure of real creative work."—Extract from the Foreword by Miss M. N. ALLAN, LL.A.

In foolscap 4to, cloth, with 82 black-and-white illustrations and designs. **3s. net.**

ENGLISH CLASSES.**English Grammar and Composition.**

By W. J. WESTON, M.A., B.Sc. (Lond.).

In this volume the theory of the language is made interesting, and taught with effect by being brought into union with the practice. The book is a manual of Grammar taught through composition. **3s. 6d. net.**

English Prose Composition.

By THE SAME AUTHOR.

This is a help to the writing of English and will prove invaluable to those who have difficulty in expressing themselves easily and correctly. The book is suitable for class or private study. **3s. 6d. net.**

New Edition, Revised and Enlarged.**Volumetric Analysis.**

By J. B. COPPOCK, B.Sc., F.I.C., F.C.S.

Specially adapted to the requirements of Students entering the internal and external examinations of Schools, Institutes, Colleges, and Universities. In crown 8vo. **3s. 6d. net.**

REVIEWS AND MINOR NOTICES.**AMERICA AND EUROPE.**

- (1) *The National Government of the United States.* By EVERETT KIMBALL. (17s. 6d. net. Ginn.) (2) *A History of the People of the United States.* By WADDY THOMPSON. (6s. net. Harrap.) (3) *European History.* By HUTTON WEBSTER. Vol. I, Ancient Times, 6s. net; Vol. II, Medieval Times, 7s. 6d. net; Vol. III, Modern Times, 6s. net. (Harrap.) (4) *Modern European History.* By C. D. HAZEN. (7s. 6d. net. Bell.)

Louis XIV once remarked that the Pyrénées had ceased to exist. The remark summed up the hopes and aspirations generated in the French king's breast by the succession of his grandson to the throne of Spain. The event did not justify his expectations: the Pyrénées reasserted themselves. The task of levelling them proved to be beyond the power of eighteenth-century diplomacy. To-day one is tempted to say that the Atlantic Ocean has ceased to exist, and one has some confidence in believing that it can never be recreated as a really formidable barrier between the New World and the Old. The ground of one's confidence is partly the faith that twentieth-century diplomacy is superior to that of the eighteenth, and that the political animosities which aggravated the severance due to the "unplumbed, salt, estranging sea" are for ever things of the past. But more particularly it is based on a knowledge of the secure achievements of nineteenth-century science. Men travel now from London to New York in a shorter time than a hundred years ago they travelled from London to Edinburgh, and the journey is less perilous. Aircraft are beginning to bring America as near to England as Ireland was at the date of the Union. The submarine cable, the telephone, and the marvels of wireless telegraphy have completely eliminated the distance which once sundered the Pilgrim Fathers from the Bishop of London; Lombard Street and Wall Street vibrate in instantaneous harmony; American President and British Premier converse as easily as though both were at Paris in conference; the news of each hemisphere is immediately communicated to the whole population of the other.

In these circumstances isolation is no longer possible. However rigidly the principle of the Monroe doctrine may be enforced in politics, it has ceased to be practicable in the sphere of thought. America has become joined to Europe, and Europe to America. A new curiosity moves the minds of the peoples of each of the two continents to know more concerning the neighbours whose interests have become so closely identified with their own. The books before us go a long way to satisfy this legitimate and hopeful curiosity.

(1) Prof. Kimball, in his "National Government of the United States," gives an elaborate, detailed, and authoritative exposition of the actual working of the American constitution. He begins by tracing the historical evolution of the constitution, and makes clear the principles on which it was originally based. Then he proceeds to analyse the powers of President, Congress, and Judiciary; and to treat with wealth of reference and illustration the work of the different departments of State. The central or federal government alone comes within the purview of the volume; those who wish to know about the operation of State and local administrations will have to look elsewhere. But upon its particular subject it says what will probably remain for a long time the last word.

(2) Mr. Waddy Thompson, in his "History of the People of the United States," writes with the avowed purpose of "imbuing the youth" of his country with "the spirit called Americanism," and of "making them more patriotic and more useful citizens." This purpose, which is political rather than educational, and ethical rather than scientific, does not, however, vitiate quite so much as might be supposed the workmanship of what is a fundamentally sound and good book. The author recognizes in the fullest manner the new place which America is beginning to occupy in world affairs, and he is careful to emphasize throughout the relation of the United States to other nations. He ends his study with four excellent chapters

on the recent war and the part which America was called upon to play in it. Numerous maps and illustrations accompany the text.

(3) Prof. Webster, of Nebraska University, in his three-volume "European History," provides for college students and other advanced readers a rapid survey of the history of Western civilization from the remotest times to the present day. The first volume takes the story down to A.D. 476; the second carries it on to A.D. 1763; the third, wholly written since the outbreak of the war, brings it down to the recent treaty of peace. The work as a whole is an excellent example of one of the best types of American textbooks. It is based on extensive experience in teaching, and is therefore marked by careful arrangement and lucid exposition. It is provided with copious suggestions for further reading and with many topics for exercises. It is adorned with all necessary maps and with a fine selection of portraits and pictures.

(4) Prof. C. D. Hazen, of Columbia University, in his "Modern European History," returns to a theme which he has been diligently cultivating for a dozen or more years. In 1910 he published a book entitled "Europe since 1815," which at once was recognized on both sides of the Atlantic as one of the most scholarly and able surveys of the nineteenth century at that time available. In 1919 he incorporated the latter portion of his earlier work, with important supplementary chapters, in a volume entitled "Fifty Years of Europe." Now, once again, a lot of the familiar material appears for the third time in a sort of shepherd's pie. In this latest *réchauffé* the story is commenced in the middle of the eighteenth century. The old régime in Europe is described, the course of the French Revolution is portrayed, and the events which led up to the Settlement of Vienna discussed at length. Then follows the revised history of the century 1815-1914. In conclusion, the war is dealt with and its effects estimated. Germany is severely condemned—the indictment, and with it the book, ending on the solemn note, "The evil that men do lives after them." Prof. Hazen's books have hitherto not been illustrated, but this one contains a fine array of historical portraits and other adornments. It is undoubtedly a first-rate textbook for the period 1789-1919.

THE PSYCHOLOGY OF EDUCATION.

- (1) *Psychology of the Normal and Subnormal*. By Dr. H. H. GODDARD. (25s. net. Kegan Paul.) (2) *The Child's Unconscious Mind*. By Dr. W. LAY. (10s. net. Kegan Paul.) (3) *Lectures on Industrial Psychology*. By B. MUSCIO. Second Edition, revised. ("Efficiency Books." Routledge.) (4) *The Psychology of the Future*. By E. BOIRAC. Translated and Edited by W. DE KERLOR. (10s. 6d. net. Kegan Paul.)

In recent years the science of education has found much to learn from the psychology of abnormal individuals. The study of mental deficiency has thrown light upon the nature and development of the intellectual aspect of the mind; the study of hysteria, neurasthenia, and so-called shell-shock has similarly illuminated the nature and development of the emotional aspect of the mind.

In the Vineland laboratory, Dr. Goddard and his colleagues have during the last fifteen years carried out a series of unique observations upon feeble-minded children. In his new book (1), he endeavours to gather into a systematic survey both the chief facts known regarding the psychology of the feeble-minded child, and the more important inferences that these facts and their explanations suggest regarding the mental development of the normal child. The first and larger portion of his book is a lucid exposition of physiological psychology from this twofold point of view. The second part consists of an application of the conclusions reached to problems of education. In the work of so eminent an American authority it is pleasant to find English work generously recognized. The account of the nervous basis of mental activity follows very closely the lines set forth in McDougall's "Primer of Physio-

logical Psychology"; and McDougall's doctrine of the nature and number of the instincts and emotions is adopted almost *in toto*.

Dr. Lay's account (2) of psychoanalysis and its bearings upon education is neither so clear nor so eclectic. Dr. Goddard's book contains no reference to psychoanalytic writers: Dr. Lay's book refers to hardly any others. In his account of instincts and emotions as providing the basis of character, he follows almost exclusively the doctrines of Freud and his followers. As is now well known, the school of Freud have endeavoured to demonstrate that hysteria and other neuroses are traceable to processes which have taken place in early childhood—to the repression of infantile emotional experiences or to the persistence of infantile emotional attitudes. By deduction the analyses of such patients have revealed much that was unsuspected in the development of the emotional life in abnormal and normal children. Dr. Lay has written for teachers and for parents a somewhat uncritical account of these theories, couched in a style which is at times too technical and at times too popular for the public he is addressing; but he succeeds in indicating, in a way which is often suggestive even where it is not convincing, what changes these theories demand in the traditional training given to children both at home and in school.

Mr. Muscio's book (3) was the first British work to be published on industrial psychology. The first edition was issued three years ago in Australia, and then contained a series of lectures delivered at the University of Sydney, under the auspices of the Workers' Educational Association. The revised edition, now published from London, includes a fuller and more detailed account of scientific management in business; certain smaller changes appear to be the product of a first-hand study of the actual applications of psychology to industrial problems in America, and of direct investigations of these and similar problems in England. Mr. Muscio thus writes with a wide knowledge of industrial conditions in different parts of the world, as well as with a thorough scientific training obtained in one of the newest of the psychological laboratories—namely, the laboratory directed by Dr. Myers at Cambridge.

Every teacher should be familiar with current attempts to analyse the mental factors relevant to industry. In two important directions—the discovery of the occupations for which individuals are naturally most fitted, and the discovery of the best method of raising human output to its maximum level—recent investigations have already furnished striking results; and the solution to such problems, however tentative and however partial, must clearly have an immediate interest for those who wish to lift the work of education to the highest degree of efficiency, and to guide their pupils as they leave the school into the vocations for which each is most fitted. To those who wish for a clear and unbiased account of the aims and difficulties of these new ventures in applied psychology Mr. Muscio's volume may be cordially commended.

The title adopted for the translation of M. Boirac's book (4) is highly misleading. The book deals not with "the psychology of the future," but with "the future of psychical research." "L'avenir des sciences psychiques" is the title of the French original. In such phrases the terms "psychical" and "psychiques" are used in a far narrower sense than the terms "psychology" and "psychological"; they refer primarily to the apparently supernatural phenomena of the mind, such as those underlying the doctrines of spiritualism, telepathy, hypnotism, and clairvoyance.

With the general thesis of the book few psychologists would quarrel. The so-called supernatural phenomena of the mind, the author urges, both deserve and demand scientific study. In particular, he appeals for the application of an experimental technique to the various phenomena; and argues that the proper procedure is to begin with those manifestations that are at once the simplest and most easily determined—such as those of hypnotism and suggestion; and to accept such complex conceptions as those of spiritism only when all other means of interpretation have failed.

Unfortunately, his practice is not on the same high level as

his precepts. He believes, for example, that the living organism generates a "radiating force" capable of acting upon another organism at a distance. This conception plays an important part in his exposition. Yet the few observations he adduces in its support appear to have been carried without regard to the most elementary precaution for eliminating less mystical explanations. An appendix on "The Radiation of the Human Brain" contains the following sentences: "When we look at another human being we send toward him a ray of light from our soul, heavy with anger or soft with tenderness. Evidently, then, our cerebral activity is spread into space . . . Thus the brain can radiate and act far beyond the limits of the human organism." A natural psychological phenomenon is first described with a mixture of pseudo-scientific metaphors; the metaphors are then accepted as literal facts. Such statements can do little to further the cause Dr. Boirac has at heart.

PAST AND PRESENT.

- (1) *The Light of History*. By K. W. SPIKES. (4s. 6d. net. Hodder & Stoughton.) (2) *A Social History of England*. By E. M. WILMOT-BUXTON. (6s. Methuen.)

Although the themes of these two books differ, their purpose is one and the same. It is to interpret the present in the light of the past. Says Miss Spikes: "The aim of this book is to select some of the more important problems of to-day, and to explain in outline, but with clearness, how these have come to be. It is an attempt to help to create sound judgment, and the historical outlook, and especially to give such knowledge of social and international affairs as will enable the student to become a more intelligent citizen of his own State and of the world." In similar vein Miss Wilmot-Buxton, an experienced and skilful teacher of history, writes: "Modern conditions . . . cannot be fully understood till their history is known," and she considers that "the chief value of social history as an educational subject" consists in its use as an interpreter of existing social phenomena.

(1) Miss Spikes seeks light from the history of Europe as a whole. In thirty-seven short chapters she sketches the outlines of Western civilization from the time of the Roman Empire to the present day. One is constrained to ask, however, why nothing at all is said of the earlier light which came from Egypt, Mesopotamia, Judea, and Greece. The modern world cannot be adequately explained by means of any illumination which does not include beams from beyond the Christian era. Confining herself to the Christian era, Miss Spikes shows what permanent contributions to the present order were made by the Romans, the Teutons, the Northmen, and others down to the French Revolutionists, and finally the thinkers and actors of the nineteenth century. She provides an interesting and accurate, though slight and incomplete, sketch of nineteen hundred years of European history. The purpose of the writer gives to the narrative a unity and continuity which is often lacking in brief surveys of so vast a field.

(2) Miss Wilmot-Buxton limits her attention to England, and concerning even England she tells a tale which—like that of "Green's Short History"—does not differ quite so widely from the ordinary political narrative as one might be led by the title to expect. However, the kings and warriors are usefully ignored, and interest is concentrated round "certain lines of development which appear to have affected the community." These lines are traced in chronological sequence in a series of chapters, each of which, as a rule, covers about a century of history. The broad characteristics of the period are seized and vividly described; the permanent importance of the era is indicated. The book makes a convenient companion to the ordinary school textbook, and that all the more because the author has skilfully contrived to embody in her work a large number of quotations from original sources and from contemporary witnesses.

Both these volumes are the product of sound and conscientious labour: and both show evidence of extensive reading, fresh ideas, and balanced judgment.

CLASSICS.

- The Greek Orators*. By Prof. J. F. DOBSON. (7s. 6d. net. Methuen.)

This is an able and conscientious piece of work; the Greek orators are taken in chronological order—from Antiphon to Dinarchus—and we are given a brief account of the life and times of each, a full analysis of the contents of the chief extant speeches, with an examination of their style, followed by a recapitulation of "literary characteristics." Prof. Dobson's scholarship is unquestionable, and, more than this, he has the right taste or feeling. For example, he always tells us the little homely things—and always with just the right touch—that make the different authors, of whom he treats, real and human people for us. Thus he does not forget to tell us that the orator Lysias was the son of Cephalus, "of whom Plato gives us a charming picture in the opening chapters of 'The Republic'" (page 74). We regret, however, that we cannot call the book an unqualified success. It seems to us that Prof. Dobson has attempted to do two things at once, both to write a book for the classical scholar, tracing the growth and decline of Attic oratory from a stylistic point of view, and to give an account for the general cultured reader of the subject-matter of the different orators, with a rough delineation of the style of each. Of either of these two books he could have made a complete success, but the attempt to combine the two was an attempt to combine the incompatible. The acute analysis of style is just what the classical scholar wants (but he wants it in Greek, and not in an English translation, which helps rather to obscure than to elucidate the points), but it tires the general reader and detracts from his interest in the subject-matter. Even as it is, both classes of reader will find a great deal in the book to their liking, though each will find the catering for the other a little irksome at times. It gives an excellent idea of the subject-matter of the various speeches, with all that this means for the student of the times; and when Prof. Dobson is single-minded in his object—as he is in the excellent little summary of the causes which led to the decline of oratory, with which the book ends—his own style improves, and he writes with a masterful lucidity which was never able to shine out clearly in the body of the book owing to the (unnecessary) necessity of serving two masters.

- An Advanced Latin Syntax*. By A. L. FRANCIS and H. F. TATUM. (7s. net. Cambridge University Press.)

This is a book which all classical schoolmasters, especially those of an analytical turn of mind, will read with interest. In many ways it is more adapted to the needs of the schoolmaster than of the pupil (the argument is often too succinct for the latter), but with a good sixth form it should prove a grateful alternative to Buckland Green. As the title implies, it assumes a familiarity with regular Latin syntax, and attempts to bring seeming irregularities and late idioms into harmony with the principles of the language. The authors are to be congratulated upon a very scholarly piece of work, in which they have brought a good deal of original thought to bear upon an oft-treated theme. Occasionally compression leads to some lack of lucidity, but this is an error on the right side. Not the least valuable part of the work are the excellent indexes of words, subjects, and passages.

- Junior Latin Prose*. By H. J. DAKERS. (4s. Rivingtons.)

This is a good book which ought to have been better. It is thoroughly sound and painstaking, but only occasionally—as in the recommendation of oral practice—breaks away from the well-beaten track. In fact, it reminds us of the criticism we once heard of a certain schoolmaster—we all know him—to the effect that he could only teach what he had been taught. Mr. Dakers is really better than this: he shows some originality in his "Introductory Hints," and his choice of pieces for translation into Latin (some of them on the Great War and other modern instances) is proof of a desire to make Latin a real and living thing; but he will not trust his convictions sufficiently, and the result is that he has produced a book containing syntax, exercises, and continuous pieces, on the lines of the well known "Bradley's Arnold," good enough to be compared with that work (and this is, in a sense, high praise), but not sufficiently different in idea to justify its existence as a new publication. It is, however, simpler in standard, and can be thoroughly recommended as a stepping-stone to the more advanced work represented by that book.

EDUCATION.

- Education and Training for the Electrical and Allied Engineering Industries*. (3s. 6d. net. Edward Arnold.)

This report of the Education Committee of the British Electrical and Allied Manufacturers' Association (Incorporated) is welcome as an indication of the growing interest in education among practical men. General education gets its proper share of attention and is well correlated with technical training. The young

people concerned are divided into the four groups: trade apprentices, engineering apprentices, student apprentices, and research apprentices. The previous education of these different types is carefully considered, and the professional teacher will do well to attend to what industrial people think on these matters. It is interesting to see that the size of classes and the insufficient training of teachers are blamed for whatever defects exist. We note with interest the suggested establishment of a new functionary, the apprentice supervisor.

Evening Play Centres for Children. By J. P. TREVELYAN.
(5s. net. Methuen.)

Mrs. Trevelyan's story of the origin and growth of play centres is fitly introduced by the late Mrs. Humphry Ward, who originated them, and did so much to ensure their success. The book is a human history enlivened by all manner of personal evidence from parents, teachers, policemen, magistrates. The need for such centres is abundantly proved, and the reader's heart is wrung when he realizes that thousands of London children are literally locked out of home from the closing of school till seven or even later at night when their parents come back from work. It is not pleasant to read of an employer willing to contribute to the play centre funds in order to relieve himself of the horror of having children systematically coming to the gates of his works and crying till their parents come out. But there is comfort in having the centres as a palliative, and in this well illustrated volume we get all manner of help in the matter of starting and conducting them.

Letters to Teachers. By Prof. H. B. ALEXANDER.
(6s. 6d. Open Court Company.)

Prof. Alexander is Nebraska born. He wrote a series of letters to his fellow-teachers in the *Nebraska State Journal*, and now, in the hope that what is good for Nebraska teachers should be of value to teachers elsewhere, he has offered them to the world, with the addition of certain other "Papers of the Hour." On the whole, the result justifies the author. His treatment is broad enough to appeal to teachers of all types. His general style is attractive, though at times it drags a little. Of the letters proper, those dealing with the teacher's profession and life will arouse most interest, though the politically inclined will find some vigorous and incisive criticism under the heading "Education and Democracy." Prof. Alexander views the war from the purely American point of view, but his opinions are none the less valuable for that. Why will people persist in publishing books without an index?

Head Teachers' Manual. By G. A. CHRISTIAN.
(3s. 6d. net. Nelson.)

A man who can look back upon more than thirty years of experience as a teacher, and more than a dozen years as a school inspector, ought to have some thoughts worth bequeathing, especially if, as is undoubtedly the case with Mr. Christian, he has all the time kept his mind open to new ideas. The head teacher (actual or prospective) of an elementary school, and in a less degree the principal of any educational institution, may refer to Mr. Christian's pages with profit, especially on the practical and business side of a principal's duties, for it is on this side that the author is at his best. We could have dispensed with the suggestion of conscious rectitude with which the author occasionally refers to himself; but he means well, and he has written a useful book.

Sir Hobbad de Hoy: the Religious Education of the Adolescent. By the Rev. E. F. BRALEY. (4s. 6d. net. Macmillan.)

This volume, containing a course of lectures given to an inter-denominational body of Sunday-school teachers, will be found most useful and stimulating to that large number of persons who have to deal with adolescents, but who cannot be expected to face the technical treatises on adolescent psychology. The popular treatment of the subject has, of course, always been needed, especially by Sunday-school workers and leaders of boys' and girls' clubs, but fortunately the need is more than ever felt now that continuation schools are to become a realized fact. We like the manly ring of all that Mr. Braley has to say about religious education and Bible teaching; but even apart from this direct object of the author the book is well worth reading by all whose business it is to understand "the young person." If another edition is called for, as we hope it will be, we think Mr. Braley might do worse than add some advice about further reading. He has provided an attractive introduction to a big subject, and if only a few of his readers desire to follow it up they should be helped and encouraged.

ENGLISH.

"English Men of Letters."—*Ben Jonson.* By G. G. SMITH.
(3s. net. Macmillan.)

The fact that this volume has been written for the series to which it belongs guarantees knowledge and scholarship; in both respects it is above rather than below the average of its fellows in that series. In the chapters on Jonson's life the matter is voluminous

and the plan admirable; but it is, perhaps, those that deal with the theory of comedy and its applications to Jonson's comedies which show Mr. Smith at his best—better analyses both of the comedies and the tragedies it would be hard to find. The treatment of Jonson's masques and poems generally is sober, and certainly does not err on the side of over praise. The estimate of Jonson's influence, admittedly not great, on the writings of his contemporaries and successors, is even more conservative. The book is a valuable contribution to a more extensive understanding and appreciation of Ben Jonson, but it is more than this: it is an exhaustive study of the literary forms of his day, well worth reading for that reason alone.

"Australasian Literature Primers."—(1) *Milton.* By R. LAWSON.
(2) *Pope.* By R. L. BLACKWOOD. (3) *Wordsworth.* By A. R. OSBORN. (Each 1s. 6d. Whitcombe & Tombs.)

Is it possible to rouse in pupils in the middle forms of secondary schools the critical spirit even in its most elementary form? Every teacher of English literature asks the question, but many are content to leave it unanswered or give an emphatic "No." Yet, if it is possible, here are three modest volumes which will go a long way towards doing so. They are textbooks intended to serve as introductions to the study of great writers and consist, in each case, of the writer's life, his age, his characteristics, and his position; selections chosen to lead up to more extended study; introductory notes to each piece; and—features which, as we think, place the books far ahead, in value to the practical teacher, of other textbooks of the kind—hints on literary study, and questions suggesting lines of inquiry. These last are really excellent and, even by themselves, would make the books well worth trying. But all the introductions and notes are so simply and clearly written, and give so exactly what the boy or girl of fourteen or so can grasp and be interested in, that they can be unreservedly recommended. There are two causes for regret: that the selections themselves are not far longer and more numerous than they are; and that, though the type and general style are good, the books are not better bound. Let the writers bring out textbooks on the same lines but giving a wider range (it is tantalizing, for instance in the volume on Milton to find only eighty lines from the first book of "Paradise Lost"), and they will supply a long-felt want. Nine-tenths of the introductions and notes in school textbooks are almost worthless because the writers cannot write down to the level of children. Messrs. Blackwood, Lawson, and Osborn can do it admirably.

The Mechanism of the Sentence. By the Rev. A. DARBY.
(6s. 6d. net. Milford.)

The author's aim is to set forth the main facts of sentence structure; that aim, in a rather turgid fashion, he has accomplished. He writes, he tells us, primarily for the teacher, but he hopes that his book may be useful, too, for the higher forms in school. We are not very sanguine that it will be very useful either to teacher or to student, for it is not advanced enough (as a scientific treatise) for the one, and it is not concrete enough for the other. For the most part, it is a minute classification of the parts of speech, and bristles with a terminology as repellent as it is unnecessary. Teachers of English to whom it could possibly be of any use ought not to be teachers of English, and grammarians will hardly find it satisfying.

Principles and Method in the Study of English Literature. By W. MACPHERSON. New Edition. (5s. net. Cambridge University Press.)

This is a new edition of a book first published in 1908, containing, however, several new chapters and many emendations. It is not surprising, therefore, that it offers nothing very novel in outlook or method, although it is for the most part sound, if not exactly inspiring. The last chapter, suggesting suitable reading for an English "Advanced Course," is interesting. Any of the three courses given would provide an admirable centre of study and lead to an intelligent appreciation of literary development. All teachers of English would benefit by reading Mr. Macpherson's book, and should not be too impatient of its occasional triteness.

A Treasury of English Prose. Edited by L. P. SMITH.
(6s. net. Constable.)

Tastes differ as to what extracts should go to make up a well chosen collection of English Prose. This has two features worth noting: the pieces are nearly all short, not to say scrappy; the authors represented range from Chaucer to Conrad, Lowes Dickinson, and Santayana. As a book to take up for an idle moment it is worth recommending—it will hardly be of value for any other purpose.

The Student's Manual of Précis-Writing. By J. P. EARNSHAW.
(3s. 6d. net. Effingham Wilson.)

A short introductory chapter explains what a précis is, how it should be made, and for what purposes it is intended. Then follow

a large number of worked examples admirably done and a large number of exercises the material for which is taken from newspapers and business correspondence. It is a thoroughly sound textbook.

Macmillan's "American Pocket Classics."—(1) *Elegy Written in a Country Churchyard, and Other Poems.* By THOMAS GRAY. Together with *The Diverting History of John Gilpin, and Other Poems.* By WM. COWPER. Edited by J. H. CASTLEMAN. (2) *The Rivals and The School for Scandal.* By R. B. SHERIDAN. Edited by Dr. W. D. HOWE. (Each 1s. 6d. net.)

The Sheridan plays are well edited. The title of the first volume is hardly adequate, for it contains 21 of Gray's poems, and of Cowper 32, together with "The Winter Evening" and "The Winter Morning Walk," from "The Task." The volume therefore fully represents both poets—at least, so far as the general reader is concerned. The introductions give briefly the main facts in the lives of the authors, and the notes supplied are useful and unusually interesting. In this volume other portions of the works of the poets are used to serve as notes; thus, Cowper's own account of his pets, as published in the *Gentleman's Magazine*, is printed in full. Both volumes are printed in clear type and serviceably got up. The books are good value for the price.

GEOGRAPHY.

Philips' Schoolroom Map of Europe. New Edition, showing New Boundaries. (Size 68 inches × 54 inches.) (21s. net.)

The publishers of this map have long been noted for the excellence of their wall maps for use in schools, and they deserve great credit for producing so soon after the Peace Conference a large scale map of reconstructed Europe (scale 1 inch for 60 miles approx.). The territorial changes of Central Europe are shown and the new boundaries of the various states are distinctly marked. The creation of so many new states, such as Poland, Czecho-Slovakia, and Jugo-Slavia, has made the map of Central Europe very complicated. The size of this map, however, and the deep shades of colour combine to show the political divisions with great clearness. This map will, therefore, be particularly useful in teaching large classes. Placed side by side with a pre-war map, it will provide an interesting study in historical geography. Mounted on cloth and varnished, the map is provided with rollers; unvarnished, it is arranged to fold. The unvarnished sheet will be found preferable in classrooms where there are difficulties of light, as it does not shine. We have one suggestion to make to the publishers—viz., that in atlases and wall maps the term German Ocean should not be used as an alternative for the North Sea. In the first place, the North Sea is not an ocean, and secondly, it is not German.

The Natural Wealth of Britain. By S. J. DULY. (6s. net. Hodder & Stoughton.)

Mr. Duly's book is the latest addition to the "New Teaching Series of Practical Textbooks," each of which aims at presenting a three years' course of study for middle and upper forms. The book is one to be read by all teachers of geography, who should find inspiration from the author's novel outlook and his unconventional treatment of their subject. In the opening chapter he traces back to their origin the articles employed in the making of his book, and points to the earth as the great storehouse from which our needs are supplied. Taking geology as the fundamental science, he explains the processes of mining and quarrying raw materials, and then describes the different types of manufacturing industries, and their distribution throughout our country. Part I (the first half of the book) is occupied with structural and field geology; and helpful instructions are given for the use and interpretation of contoured geological maps. Part II is a shorter section, dealing with the four great industries of farming, fishing, forestry, and mining. Part III, which occupies about one-third of the book, relates mainly to the economic geography of the coalfields of Britain, and Swansea is taken as an illustration of the factors which have determined the growth of a town. Some of the information regarding mining and business methods is, perhaps, too technical for the general student. The geography section would be improved by the addition of suitable questions, and the chapter on transport might well have contained some mention of the findings of the Canals Commission.

HISTORY.

Modern European Civilization. By R. L. ASHLEY. (8s. net. New York: The Macmillan Co.)

This book is a sequel to the author's previous volume on "Early European Civilization," a work which—such is the American view of the antiquity of the Old World—carried the story of the development of Western man down to the seventeenth century of the Christian era. The present volume begins with the seventeenth century and brings the narrative down to the recent war. There is

a good deal of ordinary general political history in the book—more, indeed, than one would expect to find in a book with the title of this one. But emphasis is laid on great movements and on social and economic conditions. "The main purpose of the book," we are told, "is to explain the present through a study of the past." This purpose is excellently fulfilled. The story of the progress of the Western World is outlined with skill and precision. It is illustrated by some 150 pictures, and accompanied by 36 maps, half of which number are usefully coloured. Each chapter is followed by references, lists of topics for special study, and a selection of suggestive questions. The book, as a whole, is extraordinarily workmanlike and valuable.

Principles of Commercial History. By JAMES STEPHENSON. (7s. 6d. net. Pitman.)

Mr. Stephenson has provided a singularly lucid and interesting textbook of commercial history. It is based on a long experience of teaching the subject, and it shows many evidences of the way in which the practical instructor in the course of his work learns how to arrange his material, to simplify difficulties, to tabulate results, and to discover suitable and apt illustrations. The author treats the term "commercial" with a wise and generous laxity. He realizes that the movements of commerce cannot be comprehended unless they are related to the simultaneous movements in industry, society, politics, and even thought. Hence the book is little less than a summary of world history written from the commercial point of view. It is divided into four sections—viz., ancient, mediæval, transitional (1450–1550), and modern. It is illustrated by means of numerous maps, plans, charts, diagrams, and pictures. Altogether it is a most attractive, informative, and stimulating volume.

Man Past and Present. By the late A. H. KEANE. Revised and largely rewritten by A. H. QUIGGIN and A. C. HADDON. (36s. net. Cambridge University Press.)

In 1899 Prof. Keane published a book under the above title which soon became recognized as the standard authority on the elements of ethnology. It was, indeed, one of the prominent sources of the interest in the subject which attracted a large number of cultivated intellects to its pursuit in the opening years of the twentieth century. Few spheres of scientific investigation have been more completely transformed, or more widely enlarged, during the past twenty years than has the sphere of ethnology. In particular, the discovery of the "Mauer jaw" ("Der unterkiefer des Homo Heidelbergensis") in 1907, and the unearthing of the Piltdown skull in 1912, have necessitated an entire reconsideration of all the anterior evidence concerning the origin and the antiquity of man. Countless monographs on different aspects of ethnology have appeared in the transactions of the learned societies of all Western nations. The task of weighing, discriminating, and co-ordinating their results has been colossal, but it is one that had to be faced and attempted by the editors of a new edition of Keane. Some critics, no doubt, will hold that Keane ought to have been scrapped and a wholly new book written. We do not share that view. A large part of Keane is still sufficiently accurate and valuable to warrant its preservation and re-edition. The editors of the present revision—and, in particular, Mrs. Hingston Quiggin—have lavished an immense amount of toil and specialized knowledge in eliminating obsolete opinions, in incorporating new information, and in giving full references to the copious ethnological literature which has been issued since Keane's first edition appeared. Dr. A. C. Haddon has corrected and supervised the work throughout. In its new form this useful textbook will probably for long continue to be regarded as the indispensable introduction to its subject.

Seneca. By F. HOLLAND. (10s. net. Longmans.)

In an introductory note to this work Mr. Holland tells us that his original intention was that it shall form an introduction to his translation of Seneca's letters, which, though almost completed, he fears will now never be published. We sincerely hope it will; for the present volume is proof positive that he is admirably qualified for such a work. It is a fascinating biographical study, in which, though perhaps erring a little on the side of leniency, he has done much to improve the reputation of Seneca, who has always been accused of failing to practise what he preached. Mr. Holland shows very clearly and convincingly that Seneca's philosophy did not regard wealth as a thing to be shunned, but as a "neutral," becoming good or bad according to the use made of it. The peaceful and good government of the famous *quinquennium Neronis* is ascribed to his good influence; but he had to steer a course amid very troubled waters after that, and, in judging the man, we must take account of the times in which he lived. Mr. Holland is inclined to attribute the tragedies, commonly assigned to (this) Seneca the younger, to some later member of the family, and his consideration of the evidence is both scholarly and

(Continued on page 330.)

'A WORD fitly spoken is like apples of gold in a picture of silver'—and to-day brings to the man with a message his opportunity. For the Old World has died. The New World is not created. There is no hush of perfection in the cool of the evening: instead—to man is given infinite possibilities. The Gods cry aloud, 'Take what is left after this destruction, and build: for the eyes of men are open to the vision of life, and a desire is upon all humanity to realize the vision—' to make life splendidly worth while.' The birthplace of reconstruction is the mind of the young, and, if the building is to be true, the vision realized, youth must come prepared to the work.

¶ It is the aim of the New World series of publications to give to Youth some measure of this preparation. Scholars of great academic experience, in conjunction with practical teachers, here tell the World-old truths illuminated by the relentless lessons of years darkened by war. There is a new power and a new spirit abroad, and here are 'words fitly spoken' to bring the message to Youth.

impartial. For ourselves, we are inclined to agree with him. There is a misprint in a foot-note on page 27, and a strange slip on page 44, by which Ovid's famous "Video meliora probroque deteriora sequor" is erroneously ascribed to Horace.

MATHEMATICS.

"The D.U. Technical Series."—*Mathematics for Engineers*. Part II. By W. N. ROSE. (13s. 6d. net. Chapman & Hall.)

This volume constitutes Part II of a treatise on mathematics intended for students of engineering, and deals with the differential and integral calculus. The author explains at length in his preface the principles underlying the scheme adopted in the book, and emphasizes the need of a sound knowledge of the subject to the engineer desirous of equipping himself at all points. We cordially agree with the latter, but do not think that the engineering student will trouble himself greatly regarding the author's scheme of arrangement; he will be satisfied if the book gives him a clear exposition of the principles involved, with full explanations of troublesome points (usually omitted in mathematical textbooks), and shows him how to apply these principles to numerical engineering problems of a practical, not an impossible, character. Applying these tests to this volume, we can state confidently that it will be more than welcome to large numbers of engineering students who are studying higher mathematics and have to rest content with a crumb of information thrown at them occasionally. Graphical methods are used freely, but not at the expense of analytical methods; great care has been taken not to proceed until the matter under discussion has been made clear, and a very large number of worked out numerical examples is included. Some of these examples are used to illustrate mathematical principles which have just been discussed; others are given in special chapters devoted to practical applications; when all are put together and included with the numerous exercises intended to be worked by the student himself, it will be found that there is scarcely any important engineering problem involving the calculus which has been omitted. Useful chapters are given on the spherical trigonometry employed in surveying and on mathematical probability. The writer of this review is an engineer, and confesses that the volume has cleared up two or three points on which he had somewhat mixed beliefs; he can recommend the book confidently to his engineering brethren, as well as to teachers of engineering students.

"The New Teaching Series."—*Everyday Mathematics*. By F. SANDON. (4s. 6d. net. Hodder & Stoughton.)

The purpose of this work is certainly to be acclaimed; whether the attainment of this purpose is furthered by its contents is another question. The idea of taking illustrative examples from the happenings of daily life is good, so long as clarity is not lost thereby. But surely, for instance, the mind must be trained by protracted experience with small numbers before any grasp of such statistics as occur on page 34 can be expected. Again, on page 111, without any argument, we have the generalization of the number of arrangements of n things r at a time, from four particular cases, with practically no previous training in algebraical notation. With no preparation to speak of on the laws of positive integral indices, logarithms are founded upon the general theory of indices. Formulae, as well as elementary graphs, are deferred until well on towards the middle of the book. Under the heading of "Chance," after a sermonette on the difference between gambling and insurance, the author finds it, of course, necessary to recognize that the two things are founded on the same principle of probability. The practical examples are not always very practical: on page 6 we have ten eggs and half a pint of milk weighing in all but 1 lb.; the allotment question on page 8 is ridiculous; on page 2 the expenses of the family of five will make a housewife smile.

Introductory Mathematical Analysis. By Prof. W. P. WEBBER and Prof. L. C. PLANT. (9s. 6d. net. Chapman & Hall.)

Within the compass of three hundred pages has been compressed a certain amount of information relating to algebra, trigonometry, co-ordinate geometry, and differential and integral calculus. Needless to say, the treatment is somewhat superficial, and, indeed, the authors state that "in general, no effort at rigour beyond a reasonable conviction has been attempted. Proofs have been given for some theorems that many teachers may prefer to regard as assumptions." This plan of skimming the surface of several topics appears to be a favourite one in many of the American colleges, and it would be interesting to know whether it leads to results of any real value. Certainly the amount of knowledge displayed by a number of American soldier students who attended university courses here for a brief period after the Armistice, and who professed to have taken courses of the description set out in this book, did not

(Continued on page 332.)

IMPORTANT NEW PUBLICATIONS.

A PRACTICAL COURSE OF English Composition FOR MIDDLE AND UPPER FORMS.

By W. J. GLOVER, Author of "The New English Books."
In Two Books. Cloth, 1s. 9d. each.

By reason of the extensive and painstaking research undertaken in the compilation of these Books, and the admirably chosen extracts from the **English Classics** upon which the lessons and exercises are based, it is claimed for this Course that it is **without equal** for the teaching of correct English.

HUMAN GEOGRAPHY "THE WORLD"

By JAMES FAIRGRIEVE M.A., F.R.G.S.,
and ERNEST YOUNG, B.Sc., F.R.G.S.

A new class-book prepared to meet the urgent demand for a World Geography on the lines of "Philips' Human Geographies" which have already achieved such great success. It may be used either independently or in conjunction with the Series referred to, and is suitable for the lower forms of Secondary Schools.

Crown 8vo, cloth covers, 232 pages. With black-and-white Illustrations and Maps, 3s.

IN PREPARATION. Philips' HUMAN GEOGRAPHIES FOR SECONDARY SCHOOLS.

Book I.—*The British Isles*.
Book II.—*The Atlantic Hemisphere*.
Book III.—*Euro-Asia*.

Further details and prices will be published later.

New Editions, showing **NEW BOUNDARIES**. NOW READY.
Orders are being executed as speedily as possible.

PHILIPS' Modern School Atlas OF COMPARATIVE GEOGRAPHY

New Edition, Revised and Enlarged. 80 Plates, containing 142 Maps and Diagrams, with Introductory Letterpress and complete Index. 11 by 9 inches. Cloth, 5s. net.

PHILIPS' New School Atlas OF COMPARATIVE GEOGRAPHY

New Edition, Revised and Enlarged. 72 Plates, containing 97 Physical, Political, and Commercial Maps, with Index. Size 9 by 11 inches. 3s. 6d. net.

By far the best Atlases obtainable at the prices.

Recommended for "Map Work" and "Mathematical Geography" in OXFORD LOCAL EXAMS.

MAP READING MADE EASY

By Captain C. C. ESSON and G. S. PHILIP, F.R.G.S.

The clearest and most instructive textbook obtainable. Enables any pupil quickly to become proficient in map reading and field work. Invaluable for Public Schools O.T.C. Abundantly illustrated with diagrams and maps.

NEW AND REVISED EDITION. Amended for use in conjunction with the "Manual of Map Reading and Field Sketching" at the

ROYAL MILITARY COLLEGE.
Crown 4to (9½ × 7½ in.), cloth, 3s. 6d. net.

FULL DETAILS, OR COPIES FOR INSPECTION, WILL BE SENT ON APPLICATION TO
GEORGE PHILIP & SON, LTD., 32 FLEET STREET, LONDON, E.C.4.

From Mr. EDWARD ARNOLD'S List.

A NEW PRESENTATION OF EDUCATIONAL PROBLEMS.

THE MODERN EDUCATOR'S LIBRARY.

General Editor: PROFESSOR A. A. COCK,

PROFESSOR OF EDUCATION AND PHILOSOPHY IN UNIVERSITY COLLEGE, SOUTHAMPTON.

Index and comprehensive bibliography in every book. Uniform cloth binding. 6s. net each volume.

The *Modern Educator's Library* has been designed to give considered expositions of the best theory and practice in English education of to-day. It is planned to cover the principal problems of educational theory in general, of curriculum and organization, of some unexhausted aspects of the history of education, and of special branches of applied education.

Education: Its data and First Principles. By T. PERCY NUNN, M.A., D.Sc., Professor of Education in the University of London.

The Child under Eight. By E. R. MURRAY, Vice-Principal of Maria Grey Training College, and HENRIETTA BROWN-SMITH, LL.A., Lecturer in Education, Goldsmiths' College, University of London.

Moral and Religious Education. By SOPHIE BRYANT, D.Sc., Litt.D., late Head Mistress of the North London Collegiate School for Girls.

The Teaching of Modern Foreign Languages in School and University. By H. G. ATKINS, M.A., Professor of German in King's College, University of London, and H. L. HUTTON, M.A., Senior Modern Language Master at Merchant Taylors School.

Other volumes in preparation.

The Journal of Education (on first three volumes):—"The first three volumes promise exceedingly well. Every generation needs to have the philosophic basis of the best educational thought and practice restated, and for the present generation Prof. Nunn has performed the task of restatement in a way which we do not hesitate to describe as masterly. A most original and stimulating book which all who pretend to be interested in the root principles of education must read. The ripe wisdom which informs Mrs. Bryant's whole treatment of moral education, Bible teaching, and the presentment of essential religious truth would be hard to match elsewhere. Mrs. Bryant's book is of great value at the present time."

New edition, revised and brought down to the end of the Great War.

A History of England. By Sir CHARLES OMAN, K.B.E., M.P., Chichele Professor of Modern History in Oxford University. 800 pages. 7s. 6d. In Two Parts, 4s. 6d. each: Part I, from the Earliest Times to 1603; Part II, from 1603 to 1918.

In Three Divisions: I, to 1307, 2s. 6d.; II, 1307 to 1688, 3s. 6d.; III, 1688 to 1918, 4s.

A General History of the World. By OSCAR BROWNING, formerly University Lecturer in History in the University of Cambridge. 700 pages. 7s. 6d. net. Special Library Edition, 8s. 6d. net. Also in Three Parts, 3s. 6d. net each. Part I, Ancient History; Part II, Medieval History; Part III, Modern History.

A Social and Industrial History of England. By F. W. TICKNER, D.Lit., M.A., B.Sc. (Econ.), London, late Lecturer on History at the Islington Training College. Illustrated, 7s. 6d. Also in Three Parts, 3s. each.

The Last Century in Europe, 1814-1910. By C. E. M. HAWKESWORTH, Assistant Master at Rugby School. 526 pages. 7s. 6d. net.

England in the Nineteenth Century. By Sir CHARLES OMAN, K.B.E., M.P. *New Edition in the Press.*

Outlines of European History, 1789-1914. By G. BURRELL SMITH, M.A., Assistant Master at Repton School. With Maps. 3s. 6d. New Edition, beginning at the French Revolution.

Scenes from European History. By G. B. SMITH, M.A., Assistant Master at Repton School. 2s. 6d.

A Junior History of England. By Sir CHARLES OMAN, K.B.E., M.P., and MARY OMAN. New Edition, revised to the end of the Great War. 3s. 6d.

Selected Essays from English Literature. Edited with Introduction and Brief Notes by ELIZABETH LEE. 2s. 6d.

The Essayists drawn upon include: Bacon, Cowley, Steele, Addison, Fielding, Johnson, Goldsmith, Lamb, Hazlitt, De Quincey, Leigh Hunt, Mitford, Thackeray, and Carlyle.

Epochs of English Literature. By J. C. STOBART, M.A., formerly Lecturer in Ancient History at Trinity College, Cambridge. In 9 vols., 2s. 6d. each. Vol. I. The Chaucer Epoch, 1215-1500. Vol. II. The Spenser Epoch, 1500-1600. Vol. III. The Shakespeare Epoch, 1600-1625. Vol. IV. The Milton Epoch, 1625-1674. Vol. V. The Dryden Epoch, 1660-1700. Vol. VI. The Pope Epoch, 1700-1750. Vol. VII. The Johnson Epoch, 1742-1798. Vol. VIII. The Wordsworth Epoch, 1798-1830. Vol. IX. The Tennyson Epoch, 1830 to present day.

Laureata. Selections from the best poets from Shakespeare to Swinburne, with Biographical Notes on Authors. 224 pages. 2s. 3d.

English Narrative Poems. With an Introduction by Sir HENRY NEWBOLT, and Notes. 2s. 6d.

English Ballads. With an Introduction by Sir HENRY NEWBOLT. *Ready shortly.*

Grammaire Française. A l'Usage des Anglais. Par E. RENAULT, Officier d'Académie; Lecturer in French at the University of Liverpool. viii+360 pages. 5s. Conspicuous for its wealth of illustrative examples, the result of a wide reading and critical power.

First Lessons in French. By MARY BAGULEY, Assistant Mistress, North Manchester School. A new beginner's course, plentifully illustrated. Oral work is based on the pictures; simple grammar rules and vocabulary are appended. 2s. 6d.

A First German Prose Composition. By F. W. WILSON, Ph.D., Assistant Master at Clifton College. 2s. Suitable for second-year pupils.

A Second German Prose Composition. By F. W. WILSON, Ph.D. A course similar to the above for more advanced pupils. 2s. 6d.

A Spanish Course. Literary and Commercial. By E. A. WOOLF, D.Lit. With sections on Commercial Correspondence and the Verb, and two Vocabularies—Spanish-English and English-Spanish. 5s.

The Elements of Geometry. By R. LACHLAN, Sc.D., and W. C. FLETCHER, M.A. xii+235 pages, with Answers, 3s. 6d.

Practical Trigonometry. By H. C. PLAYNE, M.A., Head Master of Bancroft School, and R. C. FAWCETT, M.A., Head of the Military and Engineering Side at Clifton College. Crown 8vo, cloth, 3s.

The Principles of Drawing. By L. BELLIN-CARTER, F.R.S.A., Art Master at Wellington College. Fully illustrated. 3s. net.

First Principles of Music. By F. J. READ, Mus.Doc. (Oxon.), formerly Professor of the Royal College of Music. The clearest and most concise treatise of the kind that has yet been written. 1s. 6d.

Technique and Interpretation in Violin Playing. By ROWSBY WOOF, F.R.A.M., Professor at the Royal Academy of Music. 4s. 6d. net.

Arnold's Singing Class Music. A Series of entirely new Unison, Two Part and Three Part Songs for Treble Voices, with Piano Accompaniment, and Sol-fa in addition to Staff Notation. Specially composed by the foremost British musicians. Prices 3d. to 5d.

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.1.

dispose one to think that our methods of instruction were in any way inferior to those prevailing on the other side.

Plane Trigonometry for Secondary Schools. By Dr. C. DAVISON. (6s. 6d. net. Cambridge University Press.)

This book calls for little comment, not because it is unimportant, but merely because it embodies what may be regarded as the standard method of teaching the elements of trigonometry. Some writers seem to aim at devising unusual and novel proofs of fundamental theorems. These may be ingenious and interesting, but for didactic purposes are rarely superior to those in common use. Dr. Davison is content to offer those which have been most generally approved and adopted. The range covered extends to the easier applications of De Moivre's theorem. There is an adequate number of examples of varying degrees of difficulty.

RELIGIOUS KNOWLEDGE.

Evolution and the Doctrine of the Trinity. By STEWART A. McDOWALL. (9s. Cambridge University Press.)

Mr. McDowall has already won for himself a secure place, by his previous books, as an independent thinker, honest and fearless in his search for truth, who has set himself the task of restating Christian doctrine in terms which appeal to the modern mind. For this work he is remarkably well equipped, possessing, as he does, a real grasp of the fundamental principles of science and philosophy, and being well in touch with modern investigation in these departments as well as the purely theological. The present volume carries the author's work well into the central doctrine of orthodox Christianity—the Trinity. We cordially commend Mr. McDowall's volume as a remarkably fresh, interesting, and valuable discussion of the important theme with which it deals.

The Catholic Student's "Aids" to the Study of the Bible. By HUGH POPE. Vol. II: *The New Testament (The Gospels)*. (5s. Washbourne.)

This is a continuation of a similar volume by the same writer on the Old Testament. It makes a remarkably compact manual, full of scholarly information which it is a great convenience to have brought together within the covers of a single volume. It forms a most useful introduction to the study of the Gospels, embracing such topics as the History of the Jewish People from 142 B.C. to A.D. 70, Jewish Life in the time of Christ, Palestine in the

time of Christ, the Languages spoken in Palestine in the time of Christ, the Canon of the New Testament, the Versions, and Textual Criticism; special chapters are devoted to each of the Gospels, and one to the Synoptic Problem; and there is a Chronology and Harmony of the Gospels. The mass of material here collected is very considerable, and the whole is lucidly arranged and helped out with the aid of maps, indexes, catalogues, synopses, &c., which will be found very useful. Father Pope's critical conclusions will not always command assent; but his discussions are always based upon sound knowledge. The book will be a boon not only to "Catholic" students, for whom it has been primarily written, but to many others. While its point of view is "orthodox," this is not allowed to obscure the presentation of the relevant facts and data.

The Religion of Israel. By Dr. GEORGE A. BARTON. (10s. 6d. net. New York: The Macmillan Company.)

A volume of popular lectures on the Religion of Israel by so distinguished a scholar as Prof. Barton naturally rouses high expectations, which the present volume will not disappoint. Here we have the outcome of long, patient, and wide study, set forth in a really popular form. The author explains in his preface that: "This little book is written for college undergraduates, and is accordingly not a systematic treatise on Old Testament theology. The writer has had considerable experience in teaching both graduate and undergraduate students, and has endeavoured to put into the following pages the kind of information in which, as he has learned, undergraduates take an interest, and to present it as he has found they like to have it presented. He has found that the undergraduate wishes to know the truth as fully and frankly as it can be known, and, while he has not always the disciplined patience to enjoy the details which the more mature student must master, he is interested in watching the development of great movements in history, and in tracing the forces that shaped them."

The book presents a survey of this development from the beginnings, having valuable chapters on "The Semitic Background" (I), "The Value of the Early Biblical Narratives" (II), "The Origin of Israel" (III), "Moses" (IV), "The Pre-Prophetic Period in Canaan" (V), "The Eighth Century Prophets" (VI), "Deuteronomy and Jeremiah" (VII). In the succeeding chapters the following topics are dealt with:—The Exile and Restoration,

ESTIMATES FREE.

Legalism, the Development of the Priesthood and Ritual, Angels and Demons, the Religion of the Psalmists, the Religion of the Sages, the Religious Tracts, the Hopes of the Apocalyptists, and the Jewish Dispersion.

The book is well written and of absorbing interest. It is remarkably free from anything in the nature of technical details of expression which might cause difficulties to the average student or reader.

SCIENCE.

Meteorology for All. By D. W. HORNER. (6s. net. Witherby.)

Mr. Horner is a well known author of popular works on meteorological subjects. He has a keen sense of humour, and knows how to grip the interest of his readers without sacrificing accuracy of detail. This is perhaps the most delightful volume which he has given us. It is not to be regarded as a textbook, but as a compendium of information about the weather as it affects one's daily life. As Mr. Carle Salter says in the preface that he has contributed to the volume, it will appeal strongly to those devoted voluntary observers who report to the British Rainfall Organization, of which he is superintendent. Very helpful instructions are given for making a Stevenson screen, a rain gauge, a thermometer, and so on. In the description of the construction of a mercury barometer, a word of caution might have been given as to the necessity of getting rid of air bubbles. An easier method than that described in the book is to make the J-shaped bend with pressure-tubing and always bring the mercury in the short-limb level with a fixed mark on the board to which it is attached. There is a most useful collection of weather saws and rules for prediction of weather from the results of observations of clouds and the pressure, temperature, and humidity of the atmosphere. The book contains seven plates, seventy-six illustrations in the text, and a good index. The omission of the diagram referred to on page 21 makes the text rather difficult to follow, and there is a misprint in the footnote to page 98.

Practical Exercises on the Weather and Climate of the British Isles and North-west Europe. By W. F. STACEY. (2s. 6d. net. Cambridge University Press.)

The writer assumes on the part of the pupils a considerable knowledge of meteorology and weather charts; the exercises are suitable only for advanced students. Some examples of weather charts should have been printed with the statistical tables, so that the map could be studied with the tables. In the preface it is stated "that a glance at the geography papers set in the Oxford

and Cambridge Local Examinations brings out the fact that more and more emphasis is being laid on practical work in connexion with climate in general and weather in particular." If exercises such as these are to be set in school examinations, they should certainly not appear in the geography paper, but in a paper on meteorology.

General Science. First Course. By L. ELHUFF. (5s. net. Harrap.)

Most American schools give less prominence to instruction in science than corresponding schools in this country. Mr. Elhuff tells us in his preface that many American high schools give only a year or so to science, and that some secondary-school pupils go through their course of study and take no subject of science at all. His book has been prepared to meet the needs of schools in the United States, and will be more especially useful on this side to teachers of science who are responsible for teaching science to boys and girls whose main studies are literary and linguistic in character. His course of study includes contributions from the physical, chemical, and biological sciences, and is designed to arouse interest, develop logical thinking, and inspire a respect of scientific research. The book will make a very useful addition to school libraries.

A Classbook of Organic Chemistry. By Prof. J. B. COHEN. Vol. II. (4s. 6d. Macmillan.)

For nearly twenty years Prof. Cohen's textbooks on organic chemistry have been used by students at home and abroad. They are characterized by extreme lucidity in exposition and by the accuracy and thoroughness which the author's standing demands. The present volume is the second part of a "Classbook of Organic Chemistry." Whereas Volume I was written as a first-year introduction to the science, the sequel is intended for second-year medical students, and consequently is somewhat specialized in treatment. As in the previous book, the theoretical and practical sides of the subject are handled concurrently, and very explicit directions are given for the carrying out of a large number of preparations. Many of these have not hitherto been discussed in elementary textbooks, e.g. quinine sulphate, casein, glucosamine, leucine, phenylalanine, and allantoin. The express purpose of the course is to give the embryo medical man some idea of the growing importance of organic chemistry and of the rapidly progressing science of biochemistry.

GEORGE GILL & SONS, Ltd.

READY NOW.

The Nature Test Maps of the Continents America, Asia, Europe, Africa, Australia. s. d.
These Maps are printed on paper adapted for writing. A broad margin is left at the side of the map, in which notes may be inserted by the pupil. The valleys, mountains, rivers, and contours stand out as actual facts. The effect is precisely that one would expect to find if it were possible to view the earth's surface from a position in space.

See also pages 339, 346, 348, and 349.

THE TEACHERS' GUILD SUMMER CONFERENCE, 1920.

A Conference on "Auto-Education" will be held, by kind permission of the Council, at the Monmouthshire Training College, Caerleon, near Newport, Monmouthshire, from Friday, July 30, to Thursday, August 5th. The subjects to be discussed are:—"Auto-Education in the Elementary School and in the Secondary School," "The Relation of Heuristic Method to Auto-Education," "The Bearing of Psycho-Analysis on Auto-Education," "The Inspector in an Auto-Education Class," "The Obstructions to the Introduction of Auto-Education into Schools."

The neighbourhood is full of historical and antiquarian interest; Caerleon having been the Roman Capital of Britannia Secunda and the accepted site of King Arthur's Round Table.

The Conference is open to both men and women, but, as the accommodation at the College is limited, it is important that early application should be made.

Prospectuses and full particulars can be obtained from the SECRETARY OF THE TEACHERS' GUILD, 9 Brunswick Square, W.C. 1.

SCIENCE.

- Botany, Junior.** By FRANCIS CAVERS, D.Sc. 3s. 6d.
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.
- Botany, Senior.** By FRANCIS CAVERS, D.Sc. Second Edition. 5s. 6d.
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purposes underlie the manifold variations which plants assume."—*Nature*.
- Chemistry, Junior.** By R. H. ADIE, M.A., B.Sc. Second Edition. 3s. 6d.
"The book offers a thoroughly sound course of practical instruction."—*Nature*.
- Chemistry, Senior.** By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. Second Edition. 5s. 6d.
"The ground is well covered on experimental lines."—*Guardian*.
- Chemistry, Senior Practical.** By H. W. BAUSOR, M.A. 3s. 6d. Including preparations, experiments on action of heat, quantitative and qualitative analysis.
- Heat, Junior.** By JOHN SATTERLY, D.Sc., M.A. 2s. 9d.
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.
- Magnetism and Electricity, Junior.** By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 3s. 6d.
"Makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.
- Magnetism and Electricity, The School.** By R. H. JUDE, D.Sc., M.A. 4s. 6d.
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature*.
- Science, Junior Experimental.** By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. Second Edition. 3s. 6d.
"We can recommend the work heartily."—*Secondary Education*.

ENGLISH AND FRENCH.

- English Composition, Junior.** By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s.
"This excellent manual makes plain for the young pupil the essentials of good writing. Can be heartily recommended."—*Education*.
- English Composition, Senior Course of.** By E. W. EDMUNDS, M.A., B.Sc. Second Edition. 3s. 6d.
"A very useful book for practical classroom purposes."—*Schoolmaster*.
- English Grammar, Junior.** With Parsing and Analysis. By A. M. WALMSLEY, M.A. Second Edition. 2s.
"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.
- English Verse, An Anthology of** (for Use in Schools and Colleges). By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. Second Edition, Revised and Enlarged. 3s. 6d.
"The selections are admirably fitted for the purpose of presenting the course of English verse through the centuries."—*Literary World*.
- School Certificate Practice in French.** By H. J. CHAYTOR, M.A., Fellow of St. Catharine's College, Cambridge. 2s.
- French Course, New Junior.** By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 3s. 6d.
"The book becomes a serious rival to those existing."—*Schoolmaster*.
- French Course, Senior.** By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. 4s. 6d.
"A model of clearness and simplicity."—*The Journal of Education*.
- French Essays, Matriculation.** (Free Composition.) By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 2s.
"A serviceable and well-graded book."—*School World*.
- French Reader, New Junior.** By J. P. R. MARICHAL, L. és L., and L. J. GARDINER, M.A. 2s. 9d.
"Consists of well-chosen literary extracts in French."—*Education*.
- French Reader, Senior.** With Introduction, Notes, and Vocabulary. By R. F. JAMES, B.A. 3s. 6d.
"This is a splendid reader."—*Schoolmaster*.

MATHEMATICS.

- Arithmetic, The Junior.** By R. H. CHOPE, B.A. With or without Answers. Third Edition. 3s. 6d.
"No better arithmetic for school work has come into our hands."—*Educational News*.
- Arithmetic, The School.** By W. P. WORKMAN, M.A., B.Sc. With or without Answers. Second Edition. 4s. 6d.
"The best arithmetic for schools on the market."—*Mathematical Gazette*.
- Algebra, Junior.** By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers, 4s.
"Maintains a high standard of excellence we are accustomed to expect from so well known a source."—*Journal of the Assistant Masters' Association*.
- Algebra, School (Matriculation Edition).** By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. 5s. 6d.
"As a school textbook this volume has much to recommend it, the examples and test papers being carefully chosen."—*Mathematical Gazette*.
- Geometry, Preliminary.** By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s. 9d.
"The author's object is, by blending practical and theoretical work at the outset, to avoid the unattractiveness of the purely theoretical textbook and the tendency to loose reasoning of the practical manual."—*Journal of Education*.
- Geometry, Junior.** By A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.
"A simple treatment of the elements of Geometry."—*Schoolmaster*.
- Geometry, The School.** By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. Second Edition. Revised and enlarged. 5s.
"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World*.
- Mechanics, Junior.** By F. ROSENBERG, M.A., B.Sc. 3s. 6d.
"The book possesses all the good qualities of its fellows."—*Schoolmaster*.

HISTORY AND GEOGRAPHY.

- Geography, Preliminary.** By E. G. HODGKINSON, B.A., F.R.G.S., Assistant Master, Crewe County School. Second Edition. 2s.
"An admirable textbook, clear, direct, and well suited to the needs of pupils for whom it is intended."—*Literary World*.
- Geography, Junior.** By G. C. FRY, M.Sc. Second Edition. 2s. 6d.
A new edition, brought as far as possible up to date to include the changes effected by the Peace Treaties of 1919.
- Geography, Textbook of.** By G. C. FRY, M.Sc. Second Edition, Revised and Enlarged. 5s. 6d.
"The compilation is by no means one of mere geographical facts; the 'why' and the 'wherefore' are everywhere in evidence."—*Schoolmaster*.
- History of England, Preliminary.** By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With Illustrations. 2s. 9d.
"In addition to an outline of political events it tries to give some idea of social and constitutional development and also to connect history with geography. It is clearly written and well illustrated."—*School World*.
- History of England, School.** By M. E. CARTER, Honour School of Modern History, Oxford. 4s. 6d.
"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.
- English History, Groundwork of.** By M. E. CARTER. Honour School of Modern History, Oxford. 2s. 9d.
"A very readable outline of the salient facts of English History. The material is well arranged and the language is simple."—*Educational News*.
- Social History of England, A.** By FREDERICK BRADSHAW, D.Sc., M.A. 5s.
"A book of high authority and serviceableness."—*The Journal of Education*.
- Government of the United Kingdom, its Colonies and Dependencies.** By A. E. HOGAN, LL.D., B.A. Third Edition, Revised and Enlarged. 3s. 6d.
An elementary account of the British Constitution suitable for upper schools. "The account of the present-day institutions of the British Empire is good and clear."—*School World*.

OCCASIONAL NOTES.

SCHOOLMASTERS, as a body, are intelligent and reasonable citizens, and can realize better than most men that strikes are a waste of energy, public and individual, involving, as a rule, loss of temper and dignity. Hence we may well infer that there must be strong reasons for the resolution to strike on a certain date, if their present scale of salaries is not improved, which was passed (by a majority of one) by a recent large meeting of assistant masters in Middlesex secondary schools. Those reasons exist. For schoolmasters, even more than for other salaried classes, the evil of high prices is aggravated by housing difficulties. Married men with less than £300 a year, who have to pay £50 to £70 a year for furnished rooms in default of more suitable accommodation, are in pitiable plight. It is difficult to persuade them to wait for the decisions of a Burnham Committee. On the other hand, local education authorities have to consider the case of the general body of rate-payers, some of whom are still worse off than many teachers. In such matters, much thought, patience, and sympathetic consideration are needed on the part of the authority. Still more is it essential that there should be, on both sides, full knowledge of the circumstances of the case. A long step towards obtaining these essentials would be to grant seats on the education committees to representatives (not necessarily of their own body) chosen by the teachers, both primary and secondary. The committees and the teachers would have information at first hand, and the teachers would have a voice in their own and all other educational matters with which the authority is concerned.

IN the Report of the Ministry of National Service there was evidence of a very irregular distribution of defects, many of which were, no doubt, due to defective general and industrial hygiene, but some of which seemed to be due to some of the constituent ethnic elements of the population being more affected by particular environments than others. No data, unfortunately, exist for even a partial survey of this subject. The extension of medical inspection to our secondary and continuation schools affords an opportunity to fill this serious lacuna in our knowledge, by making it possible to ascertain within a brief period the distribution and the types in our adolescent population. Once this were done, it might be feasible to take steps to protect special populations. Thus, it is surmised that the conditions of town life fall harder on the tall, fair-haired members of nordic descent, but the nature of the deleterious factors cannot be studied for lack of evidence. The recent regulations for medical inspection lay down that data must be collected as to stature, weight, and chest dimensions, and suggest that head measurements and hair and eye colour might be noted also. These additional observations would make all the difference between a survey useful only for local purposes and one which would throw a flood of light on the constitution of the whole population. The additional time required would not be great; yet under the stress of present examinations more cannot be done in the time allowed, and each addition to a schedule will demand more staff. A small extra cost, however, would be repaid a thousandfold in the opportunities it would give for the improvement of the national physique by ascertaining the causes of the dying out of particular stocks. Incidentally, much light would be thrown on many interesting points in heredity and in history.

WHILST attention is rightly being focused a great deal upon continuation schools and a more adequate supply of secondary schools, it has to be remembered that the Act of 1918 contemplates a thorough transformation of the upper portion of the ordinary elementary school.

Older Children in Elementary Schools. This problem forms the subject of an instructive report of the London Education Committee to the County Council. The Council have already resolved upon an extension of the central school system, but the next question is what is to be done with the 80 per cent. of children over eleven years of age who will be left in the elementary schools when the brighter ones have passed on to secondary, central, or trade schools. The eleventh year marks an epoch in the mental history of the normal child, because he has by that time mastered the tools of further acquirement—reading, writing, and arithmetic. But, as the whole tradition of our elementary schools is bound up with the question of the three R's, the needs of the older children have never been properly met. These children have largely been occupied in marking time, and this has partly accounted for the feverish anxiety of most of them to leave school. All this must be altered if the elementary school is to play its part efficiently and is to provide a suitable introduction to the newly organized continuation schools.

A CERTAIN amount has been done for these older children, in London and elsewhere, by the provision of handicraft for boys and domestic instruction for girls.

**Practical and
Literary Subjects.**

But, even under the more progressive authorities, and much more in other places, the right balance between practical and literary subjects for the children in question has yet to be found. The report before us makes meanwhile some very good suggestions. Practical arithmetic, geometrical drawing, and drawing in the wider sense need, and can receive, greater attention. The handicraft courses, instead of being confined to woodwork and conceived on somewhat academic lines, can be greatly extended in scope; and more suitable arrangements should be made for practical science work and handwork of all kinds. The traditional rows of desks must to some extent be superseded. At the same time, the literary instruction has to be made more stimulating and inspiring. But the root of the whole matter is the training of the teacher. Specialization in teaching is the only hope of success in these matters. So long as the teacher in the elementary school has to deal with all, or nearly all, the subjects taught, no real progress can be made. Hence the first necessities are that courses of specialized study and training should be established for existing teachers, and that the curricula of training colleges should allow of specialized training from the first.

THE Board of Education have just consolidated their regulations for qualifying service under the Superannuation Act, 1918, in Form 64 Pen, with certain additions to some, and amplification of others, of the rules. The following teaching service, prior to April 1, 1919, is qualifying:

**Qualifying
Service.**

In schools represented on the Head Masters' Conference, the Associations of Head Masters and Head Mistresses, on the Conference of Catholic Colleges, or on the Association of Preparatory Schools; in schools recognized for Column B of the old Teachers Register and service accepted as qualifying for registration by the present Teachers Registration Council; and, finally, service in private schools as to which it is possible to satisfy the Board that they are, or were, as efficiently conducted as those under public management. With reference to the last class of schools, an important concession is made: if it can be shown that on a given date a school was satisfactory, previous service in it will be "qualifying," unless there is evidence to the contrary. For service in these schools after April 1, 1919, a certificate from an inspector of the Board or of a local authority will be required. All teaching service is qualifying if in any university or university college, in schools receiving Government grants (other than from the Board of Education) in any part of the United Kingdom, or when maintained, aided, or inspected by the Government in a British colony or dependency, or in India; in any foreign country when undertaken under the arrangement made by the Board for the interchange of teachers. The various forms of non-teaching service accepted as "qualifying," already published, remain unaltered.

THE proposal of the Bradford Education Committee to acquire a ship for use as a secondary school is now being considered in detail by a Special Sub-Committee. There can be no question as to the physical and mental advantages that would accrue to the pupils if the proposal should ultimately be realized. From a physical point of view, no more healthy or invigorating environment for school-children can be imagined than that of a ship, and

**The Bradford
School Ship.**

it is an environment, too, that would be peculiarly suitable for the imparting of practical instruction as well as of instruction of a more theoretical kind. The main advantage to the pupils, however, would be undoubtedly the broadening of their mental outlook and experience by contact with foreign peoples. The proposal has been widely commented upon, and, among all the comments that have been made, there are few or none that question the advantages that would be conferred on the scholars. Many practical points of detail, however, remain for consideration. It is estimated, for instance, that the cost of a ship would be about £200,000. It will also have to be considered whether the ship should be used to accommodate pupils at every stage of the secondary school course—that is, as a complete secondary school in itself, or whether only the older pupils drawn from the secondary schools throughout Bradford should be admitted. Another problem is whether the ship should be available for cargo: the use of the ship for purposes of freight might possibly be a solution of the financial problems involved. An alternative proposal to the purchase of a ship is the possibility of engaging sleeping accommodation for the pupils on several ships; an obvious objection to this plan is that on an ordinary passenger ship it would be difficult to obtain proper facilities for educational work. The issue of the Committee's deliberations on those and kindred questions will be awaited with interest.

A FEW years ago a *questionnaire* was circulated among universities, public and secondary schools, and institutions of similar rank, in order to ascertain the extent to which the study of Spanish had been adopted in this country. The replies were, in the main, unsatisfactory, nor is the information contained in the

**Spanish in
Secondary
Schools.**

pamphlet on "The Teaching of Spanish in the Universities and Public Schools of the British Isles," recently compiled by the Anglo-Spanish Society, provocative of greater satisfaction. In too many schools Spanish is definitely ruled out of the curriculum, and in too few is it incorporated into a regular scheme of study. This apathy towards the study of a language which boasts a splendid literature, and possesses an economic value second only to English, must, we fear, be attributed to prejudice or a want of knowledge of the true value of the subject. The appeal which the Spanish-speaking world makes to English youth should not be thus ignored, and the success attained in Spanish teaching in such schools as Bradford, Carlisle, Brighton, Oundle, King William's College (Isle of Man), and Nottingham, should encourage this study in schools which still hesitate to include Spanish in the regular curriculum. Insufficient interest is taken in the subject. Lack of qualified teachers in schools could be remedied by granting grace periods to modern languages specialists and by offers of better salaries to well qualified men. The universities could help by giving preference to English lecturers and readers and by founding travelling studentships. The study of Spanish in this country is worthy of encouragement, and it is to be hoped that within the next few years Spanish may be the regular "second foreign language" in a greater number of schools.

AS our teachers and students of modern languages have been unable, with rare exceptions, to visit the Continent for six years, one can expect that a great

**Study
Abroad.**

rush will take place during the coming long vacation. The teachers will need to smarten up their accent and to get into fresh touch with French colleagues, broaden their outlook on post-war problems, and secure some acquaintance with recent foreign literature. The pupils need to realize that England did not win the war off her own bat, and a stay in a French family—probably for the first time—will not only improve their French, but their European history as well. They will find their hosts as polite as before, but somewhat saddened and disillusioned on the results of the war. But it is when the French or Belgians wish to come to England that the difficulties will begin. For a stay of four weeks, the allowance in pre-war days was ten pounds, in addition to travelling expenses. With the rate of exchange at 50 to 60 francs to the pound, this amount may just suffice, in spite of the enormous increase in the price of living. But, when a French boy wishes to come to England, he will have to pay more than double what he did before, and, with the present decrease in the fortunes of the middle classes in France, it is doubtful if many will be able to afford the expense unless outside help can be provided. As France is so battered financially, it would be a gracious act if the Board of Education consented to receive gratuitously for four weeks a certain number of approved French pupils. There is only one way to ensure that the Entente shall be secure against the attacks that politicians may make on it, and that is for the inhabitants to know one another thoroughly.

Parents' Committees. To enlist the co-operation of the parent in the education of the children is at all times important; at a time such as the present, when children are being educated on lines different from those known to any of their parents, and with new and larger aims in view, such co-operation is vital. Both parents and children are apt to regard the teacher as a kind of shopman who dispenses certain wares at certain hours; and, inasmuch as they must receive his wares whether they will or not, their tendency is to grumble. The one remedy is to bring the home more closely into touch with the school. This was the object of a scheme launched on April 29 at Manchester. An Executive Committee was there formed to arrange for a Parents' Committee for every school in the city. The teacher will benefit because he will secure the intelligent assistance of the father and mother; the home will begin to see the why and wherefore of school discipline; most of all, the child will benefit through parent and teacher realizing that they are members of one another and joint trustees for the child. Mrs. H. A. L. Fisher, who was present, looking at it from her husband's point of view, said: "Driving force is necessary to get an Act of Parliament carried through, and these parents' committees can provide that much needed driving force to help forward measures for the benefit of the children." Prof. Findlay, who presided, has been a pioneer in carrying out this system of co-operation between parent and home. He introduced the Parents' Day at Cardiff, and at the Fielden Demonstration School he set up a Parents' Committee which had a large say in the management of the school. In his recent "Introduction to Sociology," he works out the several responsibilities of the various groups of the community: the family, the Church, and the State, as regards the upbringing of the young. The Workers' Educational Association, which was repre-

sented by Mrs. Bibby, has always set itself to make parents realize that the schools are theirs. The greatest enemy of education is apathy, and the best cure for apathy with parents as with children is self-activity. We must develop the keenness of the good parent to counteract the dead weight of those who will not be bothered.

The Higher Certificate and the University. REPRESENTATIVES of the four major associations met representatives of all the northern universities at Birmingham on May 15 to discuss the question of adjusting university courses to the new conditions set up in secondary schools through the institution of advanced courses and a higher school certificate. When a pupil has passed to matriculation, it is natural for parents to ask: "What good is there in allowing him to stay on for another two years? If he is to go to the university, why not start at once?" In some cases one is able to hold out a reasonable hope of a scholarship, but this does not apply in every case; and all teachers were at one in their demand that a higher certificate should give the right of admission to an Honours course. They also urged that, inasmuch as a higher certificate meant a higher standard of attainment—at any rate, in the three main subjects—than a university Intermediate examination, some adjustment of the requirements of that examination was necessary in such a case; it was absurd for the more advanced pupils to be marking time and losing the impetus and avidity of their first year.

Revision of Courses. PRACTICALLY all the universities of the north have either carried through already reforms on these lines or have them under consideration at the present time. Medicine presents a difficulty. The physics syllabus of the Higher Certificate includes no acoustics, an all-important branch for a doctor, and its treatment of hydrostatics is not what the medical course requires. The chemistry is also out of gear; there is too much about metals in the course, and too little about ferments, arsenic, and so on. Biology also is a problem, because its province is divided between zoology and botany in the syllabus of the higher certificate. But in some of the universities the medical student who has studied chemistry and physics for two years in the advanced course is encouraged to work at one or other of these subjects on a higher level in his first year, and may combine a B.Sc. with his medical qualification. Strong support was expressed for the Classical Association in its opposition to the exclusion of Latin from the advanced course in modern studies. The history faculty regards this as a retrograde measure quite as much as the philologists, and, though no resolution was passed, the agreement of all present was unmistakable whenever a protest was made against the idea that Latin is meant for the classical specialist and for no one beyond. Three resolutions only were passed: one calling upon the universities to make some public announcement that a higher certificate would be regarded as *prima facie* evidence of fitness for an Honours course; the second urging that more freedom of combination and of syllabus should be allowed in the advanced courses; in the third the Conference said it would welcome the definite establishment of a closer relationship between the higher certificate and the first-year work of the university.

ONE of the chief uses—perhaps the chief use—of history as a factor in education is as a solvent of prejudice. The mind is more tolerant and supple, without necessarily being less decisive in its judgments, when it has been accustomed by long and wise training and self-

The Teaching of Local History.

training to approach difficult problems in the light of their history. It gains a more accurate perspective; it disentangles what is still authoritative from what is obsolete; it interprets a dogma or an institution with a knowledge of the psychology of the period of its origin. In a word, its outlook is humanized. But the study of history, if it is to affect the attitude of the mind, must acquaint us both with the trend of the growth of our own nation (together with that of the other nations with whom it has been intimately associated) and also with the part which men living in our own town or county have borne in the building up of the national life. General history without local history is remote. Local history without general history is apt to be unilluminating and lacking in scholarship. On both sides of his work the teacher and the student of history needs access to first-rate authorities, and it is often in the sphere of local history that his materials are the more defective. The decision, therefore, to issue the Victoria History of the counties of England in parts, purchasable separately, will be welcome to many teachers who, under the old conditions of its publication, have had to forgo the help of this work. The publishers, Messrs. Constable, have prepared a statement showing the separate parts in which the Victoria History, so far as it is already complete, can now be obtained.

THE Lancashire Education Committee estimate that their expenditure on elementary education for the current year will amount to £1,185,600, an increase of £142,362 on that of the previous year.

Estimates in Lancashire.

A further sum, it is said, may have to be added in respect of the new scale of salaries for teachers which the Joint Standing Committee are at the present time considering. For higher education, a sum of £460,100 is estimated, an advance of £222,700 on the expenditure of last year. The main item of increase is due to contributions to non-county boroughs, urban and rural districts (partly owing to the abolition of special rating in these areas), and to salaries of evening school teachers; additional cost of maintaining the present schemes of education, automatic increases to teaching staffs, the erection of new and extensions of existing secondary schools, provision of experimental day continuation schools, the re-establishment of classes abandoned owing to the war, and increased provision of classes in rural districts. The scholarships and exhibitions have also been largely augmented.

THE penurious tradition which has retarded the development of education for so many years is ceasing to operate. There is no longer any talk of sparing the rod and spoiling the child; on the contrary, we are in danger of unduly increasing the rate and embarrassing the rate-payer. A return prepared by Mr. F. H. Owers for the County Accountants' Society gives some interesting statistics of expenditure. In 44 administrative counties during the past year elementary education required

Educational Expenditure.

twelve and a half millions, the cost for each scholar in average attendance being just over £7. This is something more than double the expenditure of twelve years ago. For higher education the total is nearly three millions, about three times the expenditure in 1908. The devaluation of money accounts, no doubt, for a considerable proportion of the advance, but it is to be remembered that the new developments under the Act of 1918 have not, as yet, matured. When the arrears due to the interregnum of the war and the new demands of reconstruction are added to existing commitments, the Treasury and the local rate-payer will have occasion to reflect. There must inevitably be a reaction against the present disposition to spend with prodigality. When that time comes the task of ascertaining the relative productive value of different educational investments may be attempted.

BROADLY reviewed, the aim of the State in maintaining a system of public education is to produce healthy, moral, intelligent, and well informed citizens; to enable individuals to use their powers to the best advantage in the service of the State. In the endeavour to achieve these aims, it may be hoped that due regard will be paid to social and economic conditions, and that a system of education adopted for particular purposes, or to meet the requirements of certain circumstances, will not be assumed as necessarily suitable for any purpose and all requirements. We have travelled a long way from the conception of the duty of the State to the education of its citizens, so admirably expressed by Mr. Dombey. "I am very far from being friendly," he said, "to what is called by persons of levelling sentiments general education, but it is necessary that the inferior classes should continue to be taught to know their position and to behave themselves properly; so far, I approve of schools." The cynic might say that levelling sentiments are now translated into Acts of Parliament and that it is the superior classes who are to be taught to know their position and to behave themselves properly.

Educational Aims.

PENDING the report of the Joint Standing Committee on the salaries of teachers in secondary schools, the Kent Education Committee have made provision for the payment of a special bonus at the rate of £12 a term, as from the beginning of the Spring Term, 1919, to all full-time permanent head and assistant teachers who were in the service of the Committee at the end of the last term. It is provided that no payment be made which would bring the total remuneration in excess of the following amounts: for graduate and assistant masters and mistresses, £450 and £350 respectively; for assistant masters and assistant mistresses on the non-graduate scale, the amount to which he or she would be entitled if placed upon the scale for certificated teachers in elementary schools. In Northumberland, an interim scale has been adopted. All teachers are placed upon a correct position on the scale to which their years of service entitle them, and are to be paid one-fifth of the difference between the present salary and what the scale salary would be on August 1, 1923, or a double increment, if that amount is greater, on April 1 of this year and on August 1 in this and the three succeeding years.

Salaries in Kent.

MUSIC AND EDUCATION: SOME IDEALS OF TO-DAY.

By F. H. SHERA, Director of Music, Malvern College.

THIS article is an attempt to emphasize and illustrate a few points in the modern teaching of music. It deals primarily with the conditions prevailing in boys' schools, preparatory and public, but it is hoped that it may be of service also to teachers in other types of school. Such teachers, however, have already much help available. For girls' schools there is the Report of the Education Sub-Committee of the Head Mistresses' Association (summarized in *The Music Student* for March last); for elementary schools there is Mr. C. T. Smith's stimulating book, "The Music of Life" (King); while every teacher should be familiar with the Board of Education's Memorandum on the Teaching and Organization of Music in Secondary Schools. Each of these provides not only food for thought, but also practical help, even for teachers who may refuse to subscribe to every requirement demanded.

Music lessons are either individual or collective. The old style of individual teaching—still unhappily rampant to-day in many boys' schools—seems to neglect, except by accident, sight-playing and all it implies (e.g. the sense of rhythm and tonality), aural training, and the appreciation of the form and content of music, in favour of mechanical playing by heart, aided sometimes by the grand old fortifying discipline of technical exercises. In a word, the pupil is helpless after he has left the teacher.

For this deplorable state of things the responsibility must be shared by the parent who demands that his son shall bring home a "nice" piece to play during the holidays, by the head master who is indifferent to every consideration but the parental wishes, and by the teacher who acquiesces in such an arrangement. All honour to him who does not! Hundreds have left school before their time, taken a diploma on grounds which have little to do with teaching, and, to a public easily bamboozled, have forthwith announced themselves as persons qualified to impart musical instruction. Behind all this lies the financial problem: the old-style teacher is poorly remunerated, but teaching of this kind earns as much as it is worth, and often more than that. However, the day is dawning. It is possible now for a teacher to be trained in teaching; parents are gradually waking up to the fact that good teaching, especially at the beginning, is imperative; some of our educationists are amateur musicians; some of our musicians amateur educationists.

Teaching material is abundant. Mrs. Curwen's "Teacher's Guide" (Curwen & Co.)—the first work, probably, to treat music as an educational subject—for pianists, the Matthey-Swinstead "Child's First Music-Making," and imaginative compositions of every grade of difficulty by English composers, as well as admirable editions of the German classics, are all on the market, for any teacher to use in accordance with his own and the pupil's individuality.

Collective music teaching of the old style presents the same dreary aspect—little or nothing but learning by rote, whether in choirs or choral societies. Here, however, as I shall hope to show, the old position is partially defensible. But the gravamen of the charge lies in the fact that such a system rests on no basis and can carry no superstructure.

Let us turn to the new style. Its aim is, in a word, to produce *musicians* rather than mere executants; or, as the Board of Education put it, "interested and intelligent listeners, useful accompanists, and competent members of choral societies," and, we may add, of amateur orchestras. The question of taste is vital; and the only way to raise its standard is by the gradual elimination of the unworthy.

Two misconceptions must be cleared away—(1) that classical music is necessarily dull or incomprehensible, or both; (2) that it is necessarily difficult. As for (1) let us point out that "classical" means "first-class of its kind," and may include Sullivan's comic operas and Percy Grainger's works as well as Bach and Beethoven. Let the teacher be careful in his choice of music: let him avoid long compositions and seek out

musical tunes; let him, for instance, have a Bach concert without any fugues in it; and progress will be rapid.

The second misconception is found more frequently amongst masters and parents. Hence the choir and choral society embark on anthems and other music of the "pretty-pretty" order beloved of country choirs, instead of Handel choruses, Farrant's "Lord, for Thy tender mercies' sake," Parry's "Jerusalem," and the like; or, in the secular department, Somervell's "Forsaken Merman," Parry's "Pied Piper," Stanford's "Diaphenia," Benet's "All creatures now are merry-minded," and so on. Only lack of space prevents the multiplication of instances. A word of warning may be given: in no instance should the words, any more than the music, fall below a high standard.

There is no reason for invariably putting before a boy music which he can fully comprehend at the outset. We do not expect him to realize at school the full meaning of the Psalms, of Shakespeare, of Aeschylus. Why should we do the like in music? Great art becomes greater and truer with the growth of experience; and just as we introduce the boy at school to great literature, so ought we to introduce him to great music. That there are inherent difficulties in the presentation of good music is not to be denied. The greatest of these is that, while for the performer concerted music is of the highest value, for the listener it is the hardest to understand. The youthful audience appreciates solo work more easily than concerted, vocal more easily than instrumental. Few realize that the broad outlines of sonata form must be grasped before a work employing it can become intelligible; fewer still that musical forms are not difficult to teach. There is, of course, the difficulty (not confined to young or even to musical audiences) of the greater interest taken in the performer than in the work performed.

Let us begin, as Prof. Buck long ago told us to do, with the hymns—the most "popular" part of school services, partly because in these the majority of boys find their sole self-expression through music. If music has any value in the formation of character, a large part of "Hymns Ancient and Modern"—still, we believe, the most widely used hymnal—will have to go on the *Index*. The numerous tunes in which sentimentality so dangerously masquerades as sentiment, as well as some of a more blatant type, must be rigorously excluded. The question of hymn tunes is a very thorny one. Final agreement is impossible. From early association, inferior music has undoubtedly a religious value for certain persons. Many, however, whose eyes are better trained than their ears are devoted to styles in music which in stained-glass, architecture, painting, or literature they would reject with scorn. But is that any reason for denying to youth the best we can give it?

In the rest of the music which the boy is to perform and hear, the same ideal should be kept in view. Piano teaching music, artistically interesting, of every grade of difficulty, and appealing to the imagination in a way in which the old-style German rubbish never did, is being literally poured on to the market by such publishers as Winthrop Rogers, the Anglo-French Company, Joseph Williams, Augener, and Curwen. Other material requires merely discreet selection, bearing in mind that most boys listen, in the first instance, for tunes, and that the faculty of attention in the young is easily tired. A forty-five minute concert, for instance, once a fortnight is far better than a two-hour one once a term, and almost as easily provided.

It will be seen that this method of developing the critical faculty is closely akin to that recommended by Matthew Arnold in his essay "On the Study of Poetry"—which, *mutatis mutandis*, might almost be an essay on the study of music. We must encourage boys to store their memories with examples of music admittedly great, and to use these as touchstones in testing the quality of other musical metal. Put Boyd's "Pentecost" next to "St. Ann's"; put a popular drawing-room song next to a Beethoven or Schumann slow movement, and there is no more to be said.

The combined training of ear, eye, and muscle—in other words, ear-training and sight-reading, vocal and instrumental—

is only gradually coming to be regarded as universally essential. The inclusion of "hearing with the eye and seeing with the ear" among modern ideals of music teaching would need apology but for its rarity in boys' schools. Until the preparatory schools recognize their duty in a matter which may affect about 95 per cent. of their pupils, it seems "up to" the public schools to repair the omission as far as possible. Take five minutes from each boy's weekly lesson periods; form ear-training classes of about a dozen boys, and give each class thirty to forty minutes per week at ear-training, sight-singing, and musical appreciation. Apart from the other advantages of the scheme, the economy of the teacher's time is a point worth consideration. Sight-playing ought, of course, to come into every lesson, and excellent books of tests by Dr. Somervell and other composers are now available, all duly graded.

The encouragement of the community spirit by music is another article of the new creed; though its value, like that of the other points mentioned, has long been recognized in certain schools. Apart from community singing in school chapels, most schools possess a choral society. The objects of the school choral society should be: (1) to provide the thrill of community singing for a large number of boys, (2) to explore some of the masterpieces of choral music, (3) (a point of far less importance than the other two) to provide portions of concert programmes. But, to do these things profitably, a fair proportion of the singers must have some elementary knowledge of sight-reading, a knowledge which increases with every bar sung from music.

Community singing on simpler lines may well form part of the usual house-singing competition. Six or more songs may be learnt and one chosen for competition purposes, marks being scaled according to the size of the choir. As material, folk songs are obviously the best possible, or would be, were it not that so many of them are equipped with words which have no claim to literary merit. Here is a chance for the budding poet. Why, in fact, should not the words be written or rewritten by the boys themselves?

Many schools, again, boast an orchestra of sorts, and for them such things as Percy Fletcher's "Folk Tune and Fiddle Dance" are invaluable; while a good deal of standard classical music may be tackled by the simple expedient of employing a piano duet as a foundation and supplying the players with the proper orchestral parts. Haydn's "London" Symphony, Mozart's last three, the first movement of Beethoven's C mi., Sibelius' "Valse Triste"—none of these are excessively difficult. Chamber-music classes, too, are full of possibilities, though the scarcity of viola players may be a handicap. A simple remedy is to find an enthusiastic violinist and string his violin as a viola. An intelligent boy can learn the viola clef very easily.

But the condition precedent to these delights is that the players be able to attack their parts at sight, and leave dropped notes to pick themselves up on repetition. Given this capacity, progress is rapid, keenness increases, and boys see that in concerted music, at any rate, the whole is much greater than the sum of the parts. Material: Haydn, early Mozart, the early Beethoven piano trios, &c. Begin with the minuets, and take the slow movements last.

The training of the audience is a necessity which is as yet imperfectly recognized. If a Shakespeare play is to be given, form masters hasten to read it with their forms beforehand; but the idea that any training is required to hear a musical work which may have occupied one of humanity's greatest brains for years comes to some people almost as a shock. Can we wonder that, through neglect of such training, many people are apathetic or hostile to classical music? Method: before (say) an orchestral concert is given, let the audience learn the chief themes—with the aid of piano, pianola, or gramophone—well enough to hum them; then, if time permits, initiate them into the mysteries of musical form, a much simpler thing than most people imagine.

For ear-training, sight-singing, and audience-training the Macpherson-Read books * give the teacher all he requires and

* Joseph Williams.

more—and, better still, tell him how to teach. Will music as taught in the first of these books ever be a part (optional perhaps) of the Common Entrance Examination? The Union of Directors of Music in Secondary Schools have pressed, we believe, for something of the kind, but, so far, without success.

In the present overcrowded curriculum, time for all these activities is increasingly difficult to find. In his book "The Music of Life," Mr. C. T. Smith invites historians to co-operate by teaching musical biography, men of science by teaching the musical applications of sound, "divines" by discussing the music of religion, and so on. Admirable! But—do many of them know enough about music to do so? Or, if ignorant, do they care sufficiently to learn?

It is undeniable that music has something to offer in return. The reading of music, demanding as it does the co-equal training of eye, ear, and muscle, exacts a closer concentration of the faculties than most subjects. The training of the critical faculty cannot but be of service to the teacher of literature; and the literature of some language or other bulks large in the curriculum at present. To the modern linguist, the training of the ear; to the man of science, the training of the instrumentalist's touch; to the teacher of literature, training in rhythm—all these may be of help.

In brief, the ideals of modern musical training are two: to enable the "plain man" to enjoy first-class music of every kind "from folk-song to modern opera," as a writer in the *Times* once put it; and to enable him to take a part, however humble, in some form of co-operative music. Under the old system, or lack of system, the chances were heavily against his attainment of such a goal. But to-day the means are ready to hand. It only remains to apply them. And we cannot better strengthen the plea for the new methods than by quoting Browning:—

I state it thus :
There is no truer truth obtainable
By man, than comes of music.

PERSONAL PARAGRAPHS.

THE death of Dr. Handley Moule, Bishop of Durham, in his seventy-ninth year, removes one of the remaining few of the last group of Fellows admitted by William Whewell at Trinity. He was the youngest son of the Rev. Henry Moule, Vicar of Fordlington, Dorset, who was reputed to be Mr. Hardy's model for the noble old parson, "the earnestest man in all Wessex," in "Tess of the D'Urbervilles." After an early education at home, Dr. Moule went to Trinity College, Cambridge, with a scholarship, and first won distinction by his "Six Sacred Poems," for which he was awarded the Seaton's Prize. In 1864 he was bracketed second in the Classical Tripos, and in 1865 obtained a First in Theology, and was elected to a Fellowship. During the next two years he served as an assistant master at Marlborough, and was then ordained. After acting as his father's curate for some years, he returned to Cambridge in 1873 as Dean of Trinity, and in 1880 was appointed first Principal of the newly founded Ridley Hall, the Evangelical College at Cambridge which he created and laboured in for nineteen years, during which period he exercised a profound influence on many generations of Cambridge men. In 1901, Dr. Moule was raised to the episcopate in the see of Durham, following Westcott and Lightfoot as he previously followed them in his chair at Cambridge.

* * *

SIR OWEN M. EDWARDS, Chief Inspector of Schools under the Welsh Department of the Board of Education, passed away, after a somewhat prolonged illness, on May 15, at Bala. Sir Owen Edwards, before his appointment as Chief Inspector, had distinguished himself as a historian and as an authority on matters pertaining to Welsh literature. At Oxford his career was brilliant, and when in residence he

was recognized as one of the best teachers of history in the University, but he will most probably be remembered best by his contribution to Welsh literature and history; for in one sense he may be regarded as the pioneer in that field of Welsh studies which aims at popularizing and making accessible some of the great Welsh classics. As a writer of smooth and rhythmical Welsh prose, he was probably unexcelled. In 1908 he left Oxford, on taking his appointment as Chief Inspector of Schools on the formation of the Welsh Department by Mr. McKenna. The post was by no means easy to fill, as in the domain of secondary education the Central Welsh Board mainly controlled the bulk of the secondary schools in Wales. Difficulties, therefore, almost inevitably arose, but, considering the somewhat anomalous relations of the new Department to the Central Welsh Board, it is remarkable that it was possible for the two authorities to work together as harmoniously as they have done. It is, however, too soon as yet to estimate properly the full effect of Sir Owen's regime on recent educational developments in Wales. There is no doubt that his end was hastened by overwork, though the recent death of his wife had considerably affected him. He was a member of the Royal Commission on University Education and the Departmental Committee inquiring into the organization of secondary education in Wales.

THE death of Mr. E. D. Rendall, formerly organist and music master at Charterhouse School, will be mourned by generations of Harrovians, Alleynians, and Carthusians. Mr. Rendall laid the foundations of a musical career at Harrow, under John Farmer, and afterwards as a Foundation Scholar at Trinity College, Cambridge. He was nineteenth wrangler in 1881, and, after studying music at the Berlin Hochschule under Joachim for three years, he became responsible for the music at Dulwich College under Dr. Welldon in 1884, and subsequently under his cousin, the Rev. G. H. Rendall, at Charterhouse.

THE death of Miss S. J. Hale, principal of Edge Hill Training College, 1890-1920, has deprived the English educational world of one of its most original and most inspiring members. Though Miss Hale took her fair share in the rather dreary grind of committee and other meetings, no one realized better than she that the essential, lasting work of education does not lie there. All who really knew her as friend, colleague, or teacher will remember her for her quick humanity, common sense, patience, genius for friendship, and not least for her quaint, dry humour. By these qualities she trained and guided generations of students; by these, in the ordinary commerce of life, she kept the machinery running efficiently, happily, safely. Her sound sense enabled her, in all sorts of circumstances, to sift the grain from the chaff: she can seldom or never have been taken in by a sham nor lured by a fad, so swiftly could she estimate such baits at their intrinsic value, without wasting time or temper on them. In public, in private, she never spared herself: no one approached her in vain. Few women can have been more deeply and generally loved and respected; in very truth she was of those "Just" whose memory is blessed.

DR. RONALD M. BURROWS, who died on May 14, will be mourned by colleagues and friends as numerous and varied as were his activities in national, educational, and social spheres. He was educated at Charterhouse and Christ Church, Oxford, taking First Class in "Moderations" and "Greats." From Oxford he went, in 1891, to be assistant professor of Greek, under Prof. Gilbert Murray, in the University of Glasgow; thence, in 1898, to the professorship of Greek at University College, Cardiff; and ten years later to Manchester University to fill a similar post. In 1913 he was appointed principal of King's College, London, being the first layman to hold that position. In a masterly way Dr. Burrows took advantage of the suspension of many of the College activities during the war to prepare for a future far wider than had ever been conceived. He established many new departments, especially for the study of foreign languages, history, and literature, and insti-

tuted a system of public lectures. His relationship with students was always of the happiest. He was a scholar in all he did, and, although a diplomatist, too, yet he always preached exactly according to his judgment. During the war he took an active part in the education of public opinion on foreign affairs, particularly with regard to politics in the Near East. He was one of the founders of the Anglo-Hellenic League in 1913, and during the following years of war he was mainly responsible for its propaganda work. Dr. Burrows also took a great interest in social work.

MR. H. G. MAYO, of Bristol Grammar School, is to be the first head master at the new secondary school for boys at Wallasey. Mr. Mayo was Senior Optime in the Mathematical Tripos 1902 and graduated B.Sc. London, in 1904. He was formerly head master of Ossett Grammar School.

MR. G. F. MORTON, head master of Tamworth Grammar School, who is to succeed Mr. W. H. Barber, head master of the Leeds Boys' Modern School at the end of the present term, is an old boy of Macclesfield Grammar School and an exhibitor of Emmanuel College, Cambridge. Mr. Morton obtained second class honours, Parts I and II, Historical Tripos 1905-6, and his experience includes service as a lecturer at Moulins, France, as an assistant at the Central High School, Manchester, and as a head master at Katherine Lady Berkeley's School, Wotton-under-Edge, and Tamworth Grammar School.

MR. W. H. BARBER, who graduated B.A. London in 1884, is retiring from the head mastership of the Leeds Modern School after thirty-six years of service. He was formerly an assistant master at the school, and was promoted to the headship in 1891. For many years he has taken an active part in the movement making for educational progress and the improvement of the conditions of service in the teaching profession.

MR. W. P. DODD, assistant master at George Watson School, Edinburgh, and a native of Denbighshire, has been appointed head master of the new secondary school established by the Denbighshire County Council at Colwyn Bay; and the Rev. D. J. Bowen, who has been "acting head master" of Ruabon Grammar School for the past three years, has been permanently appointed to the headship.

By the retirement of Mr. W. D. Eggar at the end of the present term, Eton will lose another senior master. Mr. Eggar has given thirty years' service in teaching, of which twenty-five have been spent at Eton. He will be greatly missed as a broad-minded, kindly colleague, with an unfailing sense of humour and a genial sympathy with many sides of life. An old pupil of Brighton College and an exhibitor and scholar of Trinity College, Cambridge, Mr. Eggar was thirteenth wrangler in 1887, and took a Second Class in the Science Tripos, Part II, in 1888. As Secretary for some years to the Education Section of the British Association, and as a public lecturer, he has done much good work for education, apart from his normal school duties.

AT a Congregation held on May 9 last at Cambridge, it was unanimously agreed to confer the title of "Orator Emeritus" upon Sir John Edwin Sandys on his retirement from the office of Orator of the University, after more than forty-three years of distinguished service, and to confer upon him the degree of Law *honoris causa*.

PROF. H. J. W. HETHERINGTON, who was recently appointed Principal of the University College, Exeter, has, during his occupancy of the Chair of Philosophy at University College, Cardiff, for the past five years, gained a reputation for university statesmanship. A zealous worker in educational movements outside his professional duties, he was chairman of the South Wales and Monmouthshire University Tutorial

Classes Joint Committee, honorary secretary of the Cardiff University Settlement, and honorary secretary of the Welsh National Association for Reconstruction. In addition, he conducted a successful university tutorial class at Newport, and contributed frequently to educational literature, publishing, among other works, a volume on "Social Purpose," written in collaboration with Prof. Muirhead, of Birmingham University.

* * *

THE Pope has conferred on Mr. John Gilbert the honour of Knight Commander of the Order of St. Gregory the Great in recognition of his services rendered for many years to the cause of Roman Catholic education, and on the occasion of his appointment as Chairman of the London County Council.

* * *

MR. H. WHALLEY, Assistant Director of Education at Darlington, has been appointed Acting Director and Secretary to the Darlington Technical College. He was formerly on the teaching staff of the Harris Technical School, Preston.

* * *

MISS GOODALL, of the Manchester High School, will shortly take up the position of inspector of the new day continuation schools under the Manchester Education Authority, and will supervise the work of the new system in the area.

ONLOOKER.

TOPICS AND EVENTS.

MODERN LANGUAGES HOLIDAY COURSES, 1920.—The Board of Education have published a list of nineteen Holiday Courses in Modern Languages which will be held at different times during the present year, but mostly in the summer months. It should be clearly understood that the inclusion of a course in this list is not to be interpreted as the expression by the Board of any opinion as to its efficiency or otherwise. Four of these courses are in Switzerland, viz. at Basel, Geneva, Lausanne, and Neuchâtel; one in Spain, at Madrid; two in London; and the rest in France, at Besançon, Boulogne, Dijon, Grenoble, Caen, Lisieux, Paris, Rennes, St. Valéry-sur-Somme, Strasbourg, and Tours. The table published by the Board of Education gives the date of each course, the fees, lowest cost of boarding, principal subjects of instruction, address of local secretary, and other details of importance to intending students. Copies of this paper (price 3d.) can be obtained direct from H.M. Stationery Office, Imperial House, Kingsway, London, W.C.2, or through any bookseller.

ASSOCIATION FOR THE REFORM OF LATIN TEACHING.—The fifth summer course of the Association will be held this year at Chester, from August 30 to September 8. There appears to be little prospect of hostel accommodation, and, in consequence, it has been decided to supplement lodgings by a small camp. Tents will be pitched in the grounds of the Training College, and meals will be served in the College dining hall by a caterer. The camp will be in two sections, for men and women members. The following features will be included in the programme:—Demonstration Class:—First Year Latin: Miss A. Woodward, Edinburgh. Combined reading and oral practice: Members will be divided into groups of about eight, under a leader, and the oral practice will be graded and based on the text read: Director, Mr. F. R. Dale, Plymouth. Demonstrations of the use of picture stories and picture cards in teaching composition: Prof. F. Granger and Mr. W. H. S. Jones. First Year Direct Method Greek Class: Dr. Rouse. The Teaching of Latin Prose Composition: Mr. L. R. Strangeways. A detailed programme, time-table, and particulars regarding accommodation may be obtained from Mr. N. O. Parry, 4 Church Street, Durham.

UNIVERSITY OF CAMBRIDGE: LOCAL LECTURES SUMMER MEETING, 1920.—The Summer Meeting of 1920 will begin on July 29 and end on August 18. It will be divided into two parts: Part I will extend from July 29 to August 9; Part II from August 9 to August 18. The main subject of study will be "The History, Literature, and Art of Spain." The inaugural address will be de-

livered by His Excellency Don Alfonso Merry del Val, Spanish Ambassador to the Court of St. James. There will be several lectures on Latin America, and arrangements are being made in co-operation with the Modern Language Association and the Anglo-Spanish Society for classes in the Spanish language lasting two hours each day. The classes will be held at times which will not interfere with the general lectures of the meeting dealing with Spain. The lectures in the section dealing with Natural Science will be held in the first part of the meeting, and are being arranged in co-operation with the Association of Science Teachers. Courses will be delivered on physical science (historical and biographical) and on elementary astronomy. Forms of entry and further information will be supplied by the Rev. Dr. Cranage, Syndicate Buildings, Cambridge. Letters should be endorsed "Summer Meeting."

GLAMORGAN SUMMER SCHOOL, BARRY.—This school is being held a week later this year, from August 9 to September 4, on account of the national Eisteddfod, which is being held at Barry during the first week in August. In addition to the usual courses in physical training, educational handwork, Nature-study, and so on, which are now naturally associated with the Barry Summer School, new subjects have been introduced this year. Mrs. A. M. Teague, Rolls Road L.C.C. School, will conduct a course on the Montessori method; Mr. J. Morgan Lloyd, University College, Cardiff, will deal with the teaching and appreciation of music; and Mr. R. E. Bevan, Llanwith, will give lessons and demonstrations in bookbinding. Application forms for admission to the school may be obtained from the Chief Education Official, Glamorgan County Hall, Cardiff.

LONDON SCHOOL OF DALCROZE EURHYTHMICS.—The Easter Vacation Classes held under the direction of Miss Ethel Driver and Mr. Ernest Read were attended by fifty-one students, and were a great success. The Summer School will be held in Oxford from August 16 to 28 inclusive.

LEAGUE OF NATIONS UNION.—A Summer School will be held in connexion with the Union at Kempsey School, near Worcester, from July 31 to August 7. The school will be open to both men and women. Applications for admission must reach the League of Nations Union, 22 Buckingham Gate, S.W.1, by June 15. Applications must be accompanied by a deposit of 2s. 6d. The entry fee, including the deposit, is 7s. 6d. The main object of the school is to train those likely to make efficient leaders of study circles. The subjects of study will be the Covenant and International Affairs.

FRENCH ASSISTANT TEACHERS IN ENGLISH SECONDARY SCHOOLS.—Under the Convention between the Board of Education and the French Minister of Education, young French secondary-school masters and mistresses recommended by their Ministry may be attached for a year to secondary schools in England; and in suitable cases the Board of Education may make a special grant towards meeting the expense involved in such an arrangement in secondary schools upon the Grant List. The grant made by the Board to the school for an assistant will amount to half the expenditure incurred in respect of board and lodging, or maintenance allowance in lieu of board and lodging, up to a maximum grant of £45. Further information as to the conditions under which these grants will be made, or under which schools not eligible for grants may receive French assistants, will be found in the Rules. Schools eligible for these grants, and willing to receive French assistants on these terms, or schools not eligible for grants, but prepared to receive French assistants without grants, are requested to apply at once to the Secretary, Board of Education, Whitehall, London, S.W.1. Applications must be made by June 9, as the list of schools which are to receive these "assistants" has to be sent in to the French Government in that month.

ROYAL ACADEMY OF MUSIC AND THE ROYAL COLLEGE OF MUSIC: AWARD OF MEDALS.—The following candidates gained the gold and silver medals offered for the highest and second highest honours marks respectively in the Advanced and Intermediate Grades of the Local Centre Examinations in March-April last, the competition being open to all candidates in the British Isles:—Advanced Grade Gold Medal: Albert E. Ulett, Wolverhampton Centre (Pianoforte), 143 marks. Advanced Grade Silver Medals: Elfrida J. Black, London Centre (Pianoforte), 138 marks; Mary Nettleship, Newcastle-upon-Tyne Centre (Singing), 138 marks; and Eleathia W. Smith, Middlesbrough Centre (Pianoforte), 138 marks. Intermediate Grade Gold Medal: Herbert L. Wadsworth, Man-

chester Centre (Pianoforte), 136 marks. Intermediate Grade Silver Medal: Alison O. Hollway, Canterbury Centre (Violin), 134 marks.

AUTO-EDUCATION.—The Teachers' Guild Summer Conference on Auto-Education will be held from July 30 to August 5 at the Monmouthshire Training College, Caerleon, near Newport, Monmouthshire. There will be lectures in the mornings; the afternoons will be reserved for visits to interesting places in or near Caerleon, such as Christ Church, the Caerleon Museum, with its many exhibits of local and other historical interest, and, further off, Chepstow, and perhaps Tintern Abbey and Raglan Castle, Pontypool, &c. In the evenings there will be formal discussions or some social entertainment. Among the subjects for discussion are—"Auto-Education in the Elementary School," Opener, Mrs. Lawrance, Mistress of Infant Department, Lancaster Road School, Kensington; "Religious Education"; "Auto-Education in the Secondary School," Openers, Mrs. O'Brien Harris, Head Mistress of the County Secondary School, Clapton, and Mr. F. C. Weedon, Head Master of Sir John Dean's Grammar School, Northwich; "The Inspector in an Auto-Education Class"; "The Relation of the Heuristic Method to Auto-Education," Openers, Mrs. Jessie White and Dr. Chattaway; "Musical Education"; "The Bearing of Psycho-analysis on Auto-Education," Opener, Mrs. Susie S. Brierley; and "The Obstructions to the Introduction of Auto-Education into Schools." Applications should be made as early as possible to the Secretary, Teachers' Guild, 9 Brunswick Square, London, W.C.1.

FOREIGN AND DOMINION NOTES.

GERMANY.

Always eager to learn, we have been asking Mr. Fisher about the Works School. Our Education Act [Section 10 (8)] lays down that "Any school attended by a young person in connexion with his place of employment shall be open to inspection either by the local education authority or by the Board of Education," at the option of the managers. What we wish to know is how the local education authority can test or be responsible for the efficiency of such a school where it does not inspect. The Board of Education may have one standard and one ideal, the local education authority another. Let us present a German criticism of the Works School, which perhaps may have in it something of suggestiveness. It is argued: (i) A Works School, if it pursues trade in a greater degree than education, should stand under the Ministry of Trade. (ii) Capitalists are using the Works School to bind employees to themselves; thus, at the Maschinenfabrik Windhoff in Rheine, on the Ems, apprentices who have served their time and followed the Works School course receive 100 marks on completing one further year in the service of the firm, and 200 marks more after another. (iii) Employers so minded to make workmen for themselves will naturally lay more stress in their schools on vocational instruction than on general education.

It is the third of these contentions that interests us. Suppose that in England the local education authority stood for vocational instruction, the Board of Education for general cultural training, or *vice versa*, inspection would depend on the leaning of the managers towards the one or the other. We incline to think that the option allowed to "the person or persons responsible for the management of the school" is injudicious; since, if the managers are tradesmen, they will ensue trade. To make clear the danger ahead of us we print the time-table of a German Works School, pointing out in it the neglect of general education at the lowest stage:—

Subject.	Class				Total hours a week.
	I	II	III	IV	
Civics	—	1	1	1	3
German and letter-writing	—	1	1	1	3
Commercial arithmetic and book-keeping	—	1	1	1	3
Technics (engineering)	1½	2	2	2½	8
Technical calculations	1	1	1	1½	4½
Physical and chemical exercises	—	—	—	2½	2½
Technical drawing and sketching	1½	2	2	2½	8
Total number of hours a week...	4	8	8	12	32

We need hardly repeat that, properly understood, vocational and cultural education are not antithetical; we do need, perhaps, to insist that a Works School could be so organized as to aim rather at profit for the employer than at education for the "young person." It is a critical matter in the English scheme of continuation. Yet we lay down no law—we would but provoke thought. To return to Germany, we may note here that Köln has resolved on obligatory continuation for (unskilled) working girls, the estimated cost for the first year being 280,000 marks. It is not to the Works School that Germany is looking for salvation.

A word of explanation on our attitude towards Germany. We are urged from certain sides to plead for a revision of the Peace of Versailles and to advocate a new League of Nations before the present is well set. From politics we must stand quite aloof, nor can we even accept an invitation from New Zealand, contained, as it seems, in *The Jacobite* (Gisborne, N.Z., I, 2), to overthrow the reigning dynasty of Britain. In the field of morality, we are not minded either to perpetuate hate or to condone unrepented crime. What Germany does in education we will report *impartially*, to interest or instruct those who choose to glance at our German notes.

Here, then, some miscellaneous details:—(1) The *Hochschultag* (University Congress), recently held at Halle a.S., and attended by some hundred representatives of universities and technical *Hochschulen*, deprecated the admission by decrees (*Erlasse*) of the single States (*Gliedstaaten* of the *Reich*) of primary teachers to such academies, as increasing the number of ill-prepared students; for the training of all teachers in future it approved the condition of obligatory attendance of a higher school. Lübeck began at Easter to prepare its primary teachers in this way.—(2) Prussia has abolished the celibacy of women teachers; henceforth not only may women after marriage be employed provisionally at their own request, but in their deeds of appointment the clause by which marriage cancels the right to employment will no longer appear.—(3) The *Reichsschulkonferenz*, or Imperial School Conference, which was to have been held from April 7 to April 17, could not sit owing to political events; it has been postponed until the situation is improved.—(4) Higher fees for secondary schools are reported from several parts of Germany. Thus, in Essen, the Town Authority has raised the fees for secondary schools from 150 marks before the war to 600 marks; complaint is raised that the schools will in this way be surrendered to plutocracy.—(5) In the *Volksschulen* of Lippe the reading of the Bible has been discontinued since the end of last year; as a substitute, there is put *Staatsbürgerkunde* (civics).—(6) There is considerable evidence that many German children lack the first condition of education: adequate nutrition. According to the *Frankfurter Zeitung*, the lives of two and a half million children are in peril.

In the German plans for reconstruction, an important place is assigned to scientific research, and we have word of *technische Forschungsinstitute* founded or to be founded in connexion with the coal, textile, iron, and wood industries; by the last being meant the conversion of forests into paper and chemicals. As to the German reconstruction most feared by schoolmen, that of the *Rechtschreibung*, or orthography, there is hope that it may be postponed. It would embarrass printers, involve an expensive issue of new schoolbooks, and hamper teachers of German abroad, with whom *Uden* has been an oracle for some twenty years. *Der Allgemeine Deutsche Sprachverein* (German Language Association) deems the time inopportune for the introduction of any spelling reform, moderate or drastic.

AUSTRO-HUNGARY.

The Anglo-Hungarian Corporation issues a circular from Budapest, announcing that, in order to re-establish commercial relations with Britain, they propose to establish a "practical school," in which English will be the medium of instruction. Indeed, from what follows it seems that they have already established it:—"The visitors of the school come from the spiritual and financial aristocracy, and they offer full guarantees [*sic*],—that after having appropriated the English language—they will assimilate themselves under the guide of English tradesman [*sic*] in a short time and will be a help to English firms, which intend to take, in the sphere of their activity the products of our country and cover the most important wants of Hungary." Since we are asked by the Cor-

poration to express an opinion on the scheme, we say frankly that we have nothing to do with the reconstruction of trade as trade; to be kind, we add: "Reconstruct your English!"

There is a trafficking with which we are concerned and there are goods which we are zealous to preserve and increase. Learning should be saved from the effects of war. Of all the universities of Central Europe, the University of Vienna, with its auxiliary homes of science, is perhaps in the direst stress. We ask support for the effort that Oxford and other English universities are making to assist their stricken sister.

SPAIN.

The Latin races of Europe are experiencing a revival. There is a great demand for Spanish, which, we may remark, is the vehicle of a great literature as well as an instrument of trade. Spain will assist those who wish to learn her language. The Ninth Summer Session for Foreigners, organized by the Junta para Ampliación de Estudios, will take place in Madrid from July 10 to August 20, and July 24 to September 4, 1920. The two sections, beginning at an interval of two weeks, are exactly identical, and correspond to the needs of the students of different countries, some of which are not able to come so early as others. Phonetics for beginners, book-lore for teachers—all help will be provided, and the fee for the course is but 100 pesetas. Particulars, we think, would be sent by the Sr. Secretario del Curso de vacaciones para extranjeros, Centro de Estudios Históricos, Almagro 26, Madrid.

UNITED STATES.

The recent meeting of the Department of Superintendence at Cleveland was the largest and, in many respects, the most important gathering of an educational kind that America has seen for years. The place of the teacher was the foremost subject of debate, and it was made clear that American teachers are to

receive in the future more recognition in school organization than they have received in the past. A committee of the National Council of Education reported on participation by teachers in the making of the curriculum. Again, a number of reports were rendered showing how teachers' councils have been organized and made use of in developing better school systems. During several of the discussions it was insisted that teachers must have this sort of recognition, as well as increased salaries, if they are to be retained in the profession. For ourselves, we do but record here the progress of American opinion. In the new Germany the tendency is to make the head master to his staff as the hand is to the brain; whilst in France the head masters of primary schools are out to defend themselves and have formed a Groupement national des directeurs et directrices d'écoles publiques. They are asking for a Statute to define and uphold their rights.

The Fourteenth Report of the Carnegie Foundation for the Advancement of Teaching shows that on June 30, 1919, the Trustees held securities having a face value of nearly 22,000,000 dollars. The list of benefited institutions was increased by the admission of Allegheny College and Vanderbilt University. The most valuable part of the Report (pages 99 ff.) relates to the training of teachers; another section, discussing pensions, condemns Mr. Fisher's non-contributory system and pronounces the estimate of its cost illusive.

CANADA.

The Province of Ontario will need this year two thousand teachers more than it trains. It is reported that there are good prospects of greatly increased salaries. The teachers are showing powers of combination; thus an Ontario Secondary Teachers' Federation has been organized, and the Federation of Women Teachers' Associations had last December seventy-six branches. The Saskatchewan Department of Education has issued 273 certificates to returned soldiers. The formation of character is being carefully studied in the Dominion. Every province of it is represented on the National Council for Character Education and Canadian Citizenship, which

(Continued on page 366.)

MESSRS. LONGMANS, GREEN & CO.

have pleasure in announcing

A New and Thoroughly Revised Edition of

LONGMANS' GEOGRAPHICAL SERIES. Book II. The World for Junior Students.

This New Edition has been thoroughly revised and in places rewritten. The Text has been brought into accordance with the decisions of the Peace Treaty, and the Maps have been either revised or redrawn in accordance with the Text.

The book contains 35 Illustrations and 88 Maps, of which 79 are coloured. **Price 4s. 6d.**

The chief alterations are:—

1. **TEXT.**—The Chapters on Germany and Austria-Hungary have been rewritten, and separate sections are now given to—

Germany.	Poland.
Austria.	Czecho-Slovakia.
Hungary.	Yugo-Slavia.

The sections on the Balkan States have also been rewritten so as to show the great changes in Roumania and some of the other States. Throughout the book the Text has been revised as far as it affects former German Colonial Possessions. All this matter has been rewritten in accordance with the most up-to-date information.

2. **MAPS.**—In many cases it has been necessary only to make alterations in the colour and black-and-white maps as well as in red boundary lines, but in the case of Central Europe new Maps have been constructed.

(a) **Northern Central Europe**, showing Germany, Poland, and Czecho-Slovakia.

(b) **Southern Central Europe**, showing the new boundaries of Austria, Hungary, Roumania, and the Yugo-Slav State.

The Map of the **British Empire** has been also brought into accordance with the decisions of the Peace Treaty.

It is hoped that this New Edition will prove of interest, and, with the view to making the book further known, the Publishers will be pleased to consider applications for specimen copies from the Heads of Schools.

A CAUSAL GEOGRAPHY OF THE BRITISH ISLES. By J. MARTIN, B.Sc., Senior Geography-Master, Coopers' Company's School, London. With 110 Maps, Diagrams, and Illustrations. **Price 4s. 6d.**

LONGMANS, GREEN & CO., 39 Paternoster Row, London, E.C.4.

NEW EDITIONS BROUGHT DOWN TO THE END OF THE GREAT WAR.

Longmans' Historical Series for Schools. By T. F. TOUT, M.A., Professor of History and Director of Advanced Study in the University of Manchester. In Three Books. Crown 8vo.

New Edition of Book I brought down to the Conclusion of Peace with Germany in 1919.

Book I.—A First Book of British History, from the Earliest Times to 1919. With 89 Illustrations, 13 Genealogical Tables, and 26 Maps and Plans. **3s. 6d.**

New Edition of Book II brought down to the Signing of the Armistice.

Book II.—A History of Great Britain, from the Earliest Times to 1918. With 36 Maps and Plans, 8 Genealogical Tables, and 147 Portraits and other Illustrations. Crown 8vo. **5s. 6d.**

Book II is also issued in Two Parts.

Part I.—From the Earliest Times to 1485. **3s. 6d.**

Part II.—From 1485 to 1918. **3s. 6d.**

New Edition of Book III brought down to the Signing of the Armistice.

Book III.—An Advanced History of Great Britain, from the Earliest Times to 1918. With 29 Genealogical Tables and 63 Maps and Plans. Crown 8vo. **10s. 6d.**

Book III is also issued in Three Parts.

Part I.—From the Earliest Times to 1485. **4s.**

Part II.—From 1485 to 1714. **4s.**

Part III.—From 1714 to 1918. **4s.**

New Edition brought down to the Conclusion of the Great War.

A Student's History of England, from the Earliest Times. By SAMUEL RAWSON GARDINER, D.C.L., LL.D. With 378 Illustrations. Crown 8vo. **21s.**

Or in Three Volumes as follows:—

" " XX. The Great War.

New Edition brought down to the Peace of Versailles.

A History of England for Catholic Schools. By E. WYATT-DAVIES, M.A. With 15 Maps in the text. **6s. 6d.**

New Edition brought down to the Peace of Versailles.

Outlines of British History. By E. WYATT-DAVIES, M.A. With 15 Maps in the text, 90 Illustrations, and 11 Genealogical Tables. **4s.**

A COMPLETE LIST OF ALL MESSRS. LONGMANS, GREEN AND CO.'S BOOKS ON HISTORY WILL BE SENT POST FREE ON APPLICATION.

LONGMANS, GREEN AND CO., 39 Paternoster Row, London, E.C.4.

met, for the first time, at Ottawa in February. The Council decided to make a survey of school textbooks in respect of their character-making qualities.

Proposals, wise or unwise, are afloat in England for the creation of several new universities. It has lately been pointed out that Canada, in proportion to its population, is better supplied with universities than the British Isles. They fall into three categories—provincial, of private foundation, and denominational. The provincial universities are supported by the Government, and include those of New Brunswick, Toronto, Saskatchewan, Alberta, and British Columbia. The universities of private foundation comprise Dalhousie, McGill, Queen's (formerly denominational and now State-aided), and Western, of London, Ontario. Of denominational universities may be named King's, Acadia, and St. Francis Xavier, in Nova Scotia; Sackville, in New Brunswick; Laval, Bishop's College, and Lennoxville, in Quebec; and McMaster and Ottawa, in Ontario. Unlike the American universities, the Canadian have retained the British system of honours. Many of them foster carefully the art and science of education, and the staff of the Faculty of Education, Toronto, edit a useful monthly journal, *The School*. A recent item of university news from Canada may interest some of our readers. Prof. J. A. Dale, M.A., who has held the Chair of Education in McGill University since 1908, has resigned to accept the position of Director of the Social Service Department of the University of Toronto. Prof. Dale was at the Borough Road Training College, and acted afterwards as a University Extension Lecturer in England.

NEW SOUTH WALES.

The old English colonies took the "grammar school" of the Renaissance, with Latin as the chief discipline, for the model of a secondary school. The Dominions now show a tendency to discard classics and to cultivate modern languages, especially French. New South Wales has its Modern Language Association, and this Association has founded a *Modern Language Review*, the first publication of its kind in Australia. The main scope of the journal will be modern language teaching, including the teaching of Eng-

lish; but at the same time a large part of the available space will be allotted to modern literature and philology. Criticisms, metrical and prose translations, and original compositions will all find a place in the pages of the *Review*. Foremost of tongues will come English and French. It is pleasant to find in Australia a recognition of English as a language to be studied and taught scientifically in the same way as other modern languages. But the Dominions and America can do more for English than to study and to teach it; they can contribute to its rich and continuous development. As for French, it must travel far; we would have the children of Samoa performing scenes from "Les Plaideurs," and Hereros attentive to recitations from "Horace."

SOUTH-WEST AFRICA.

According to the *Windhuker Allgemeine Zeitung*, the Government of the South African Union will take over from April 1, 1920, the formerly German schools of South-West Africa. German parents receive the right to have their children, in the four lower classes, taught in German. But there must be chosen as a second language either English or Dutch. The selected language becomes the medium of instruction in the fifth school-year, and German will be taught in the upper classes only as a special subject.

CIVIC EDUCATION LEAGUE.—The Civic Education League will hold their Summer School of Civics at High Wycombe from July 31 to August 14. The teaching and study of social subjects will be on the same lines as at previous meetings. The National League for Health, Maternity, and Child Welfare will co-operate by a course on Maternity and Child Welfare, and arrangements are in progress under which the National Council of Social Service will arrange a course on social problems of day. Courses of lectures will be given on sociology, social philosophy, social psychology, the principles and practice of sex-education, problems of the industrial system, and methods of teaching civics. It is hoped also to arrange a course for speakers on citizenship. Particulars may be obtained from Mr. W. Mann, Leplay House, 65 Belgrave Road, London, S.W. 1.

FOLLOW THE PRINCE ACROSS THE SEAS.

The whole tour of the Prince of Wales through Australia and New Zealand is described each week in the pages of the

BRITISH-AUSTRALASIAN,

the famous journal written by Australians and New Zealanders to make the lands of the Southern Cross more widely known to the people of this country.

The articles are illustrated, and contain historical, economic, and scenic details given by no other periodical. They keep in close touch with the movements of the

AMBASSADOR OF EMPIRE,

as the Prince has so well been called. Geography, aided by these articles, will become a subject of living interest. A FREE SPECIMEN of the "British-Australasian," containing one of the articles on the Prince's tour, will be sent on application to THE PUBLISHER, "British-Australasian," 51 High Holborn, London, W.C.1.

The "British-Australasian," published at 6d. weekly, has been established for 40 years, and is the leading authority on Australasian affairs. The spacious offices in Holborn include a

BOOK DEPARTMENT

where all the latest and standard publications dealing with the history, romance, economics, and geography of Australia and New Zealand may be obtained. Catalogues on application.

UNIVERSITY OF LONDON PRESS A SHORT HISTORY OF MODERN EUROPE

From the French Revolution to the Great War.

By EUGENE L. HASLUCK, B.A.

With many New Maps. Crown 8vo. 3s. 6d.

A MATRICULATION ENGLISH COURSE

By B. J. SPARKS, B.A., B.Sc.

Senior English Master at Portsmouth Secondary School.

This book covers efficiently the whole of the ground in English Grammar and Composition for the London University Matriculation and Examinations of similar standard.

Crown 8vo. 3s. 6d.

A SHORT HISTORY OF MODERN ENGLAND

From Tudor Times to the Present Day (1485-1914)

By FREDERICK BRADSHAW, M.A. (Oxon.), D.Sc. (Lond.)

"A well-written history, concise but not dull, and the result of a good deal of experience in the needs of students and examinees."—*The Times*.

With full-page Maps. Crown 8vo. 4s.

A SCHOOL GEOMETRY

By B. A. HOWARD, M.A. (Cantab. and Lond.)

formerly Scholar of Sidney-Sussex College, Cambridge; Senior Mathematical Master at Warwick School; and

J. A. BINGHAM, B.A., B.Sc.,

Senior Engineering Master at Warwick School.

This book forms a complete course in theoretical and practical geometry for Secondary Schools. [In the Press.]

UNIVERSITY OF LONDON PRESS, LTD.

THE NEW REGIONAL GEOGRAPHIES

For Secondary and High Schools.

By LEONARD BROOKS, M.A., F.R.G.S.

Geography Master at the William Ellis School.

- I. The Americas. 4s.
- II. Asia and Australasia. 4s.
- III. Africa and Europe. 6s. 6d.
 - Part 1. Africa. With Maps and Plans. 2s. 6d.
 - Part 2. The British Isles. 2s. 6d.
 - Part 3. Europe, including the British Isles. With 55 Maps and Plans. 5s.
- IV. The World. (*In active preparation.*)
These volumes form a four years' geographical course for Secondary Schools. The aim of geographical teaching is taken as the training of future citizens to imagine accurately the interaction of human activities and their topographical conditions. In each of Books I to III, two continents are selected for special study, and in each case one continent is in the northern, the other in the southern hemisphere. This gives many opportunities for climatic and other contrasts and comparisons. The whole ground-work of physical geography is covered during the course, but it is treated as subordinate to the regional studies.

In Four Books. With a large number of original Maps, Plans, and other Illustrations.

THE STUDENT'S GUIDE

Making the Most of One's Mind.

By JOHN ADAMS, M.A., B.Sc., LL.D.

Professor of Education in University of London.

The Times Educational Supplement.—"Dr. Adams has written an admirable book, and a student may be regarded as fortunate who avails himself of its wisdom."*The Teacher's World.*—"Prof. Adams combines in a rare and refreshing manner the wisdom of a philosopher with the acumen and practical skill of a man of affairs." Fifth Impression. 5s. net.

AN ECONOMIC GEOGRAPHY OF THE BRITISH EMPIRE

By C. B. THURSTON, B.Sc.

Geography Master at Kilburn Grammar School.

A complete survey of the geography and economic resources of the British Empire. The broad physical features and general economic relations to the Empire are dealt with in their world setting. Each major unit of the Empire is finally considered in detail. The book is particularly suitable for the commercial classes of Secondary Schools and Colleges, and for Evening Continuation Schools.

With many specially prepared Maps and Tables. New Edition, 5s.

GEOGRAPHY AND WORLD POWER

By JAMES FAIRGRIEVE, M.A., F.R.G.S.

*Lecturer at the London Day Training College.**The Times* critic says: "It is a valuable review treating in a broad philosophic way the influence of physical facts upon history."*With over 80 Original Sketch Maps and Diagrams.*

New Edition thoroughly Revised with additional Chapters and Maps. 5s. net.

LAND-FORM MAP BOOK

By JAMES FAIRGRIEVE, M.A., F.R.G.S.

Lecturer at the London Day Training College, &c.

By working through this book pupils are trained in the use of contour lines to represent shapes. By mapping first simple forms and then more and more complex ones, they are led by a graded series of exercises to make maps from photographs. By correlating map and picture pupils can realize what particular districts in Britain really look like.

*With Line and Half-tone Blocks. [In the press.]**Write for complete Catalogue of Educational Books.*

WEATHER CHART EXERCISES

(British Isles and West of Europe.)

By L. M. ODELL, B.Sc.

This book provides practical exercises in meteorology of the type required for London Matriculation and examinations of similar standard.

Crown 4to. 32pp. 9d. net.

THE NEW HUMANIST SERIES

An entirely New Series under the Honorary Editorship of

BENCHARA BRANFORD, M.A.

Divisional Inspector of Schools to the London County Council, &c.

EDUCATION FOR SELF-REALIZATION AND SOCIAL SERVICE

A Textbook for Class Teachers in the Psychology of Human Development.

By F. WATTS, M.A. (London), Lecturer in Experimental Psychology, Manchester University, and in the Department of Industrial Administration, Manchester College of Technology. This volume will cover the increasingly important matter of the Psychology of the Class as a miniature of Society.

Ready shortly. Crown 8vo. Cloth. 7s. 6d. net

THE TEACHING OF ENGLISH

(WITH A CHAPTER ON FRENCH SCHOOLS.)

By Miss G. BRACKEN, Senior English Mistress at the Fulham County Secondary School, London; Newnham, Cambridge, Hons. in Medieval and Modern Languages. [*In preparation.*]

THE TEACHING OF GEOGRAPHY

By Miss A. BOOKER, Chief Geography Mistress at the Holloway County Secondary School, London; Oxford Diploma, with Colonial experience. [*In preparation.*]

THE PSYCHOLOGY OF THE SIX GREAT PERIODS OF HUMAN LIFE

[*In preparation.*]

This will form an Introductory Volume to the Series and is in active preparation.

By BENCHARA BRANFORD, M.A., Author of "Janus and Vesta: A Study of the World Crisis and After."

Other volumes are in course of preparation or contemplated on the Teaching of Economics, Modern Languages, History, Physical Education, Science, Psychology and Industry, &c.

It is necessary to add that the London County Council is in no way responsible for this series and has undertaken no part in its publication.

EVERYMAN'S CHEMISTRY

The Chemist's point of view and his recent work told for the Layman.

By ELLWOOD HENDRICK

The Times, in a two column review.—"We commend the volume heartily to a wide circle of readers."

Dr. J. L. PATON, of Manchester.—"I think the book ought to be distinctly useful in the attempt to familiarize our young boys, especially classical boys, with some of the staple processes of the application of chemistry to production and the methods of scientific discovery. It is quite a live book."

With Illustrations. New Edition now ready. 8s. 6d. net.

CHEMISTRY IN EVERYDAY LIFE

By ELLWOOD HENDRICK

Author of "Everyman's Chemistry."

"There are probably scores of manuals on our shelves which discuss the science of everyday life: but there is none in our opinion which puts more keen living interest into the subject than the book before us. In the first place, the language is not only simple, but it is arresting and curiously attractive; and in the second place, the author is so obviously earnest over it all."—*The Journal of Education.*

Cloth. 3s. 6d. net.

A SCHOOL CHEMISTRY

By W. H. RATCLIFFE, B.Sc., F.C.S.

Chemistry Master at Tenison Schools.

This book provides a two years' course in Chemistry as final preparation for the London University Matriculation and examinations of similar standard.

New Edition. Part I, 4s. 6d. Part II, 2s.

LONDON: UNIVERSITY OF LONDON PRESS, 18 WARWICK SQUARE, E.C.4.

CORRESPONDENCE.

SCHOOL ENTRANCE EXAMINATIONS IN ENGLISH.

To the Editors of The Journal of Education and School World.

SIRS,—If, as was stated by the writer of the article in THE JOURNAL OF EDUCATION AND SCHOOL WORLD for April, it is difficult to set and mark examination papers in English for pupils of sixteen, it is, in the present writer's opinion, far more difficult to do the same for the elementary-school child who wishes to gain admission to a secondary school.

The examiner knows that his task is a responsible one. He has to set such a paper as will sift out the best material, and for this purpose, as far as possible test the innate powers of the child, rather than the knowledge acquired by the accident of home surroundings or of teaching. For in these two particulars there is an enormously wide margin of variation among children attending elementary schools. The child who comes from a family living on the starvation line, who himself has to add to the family income by his exertions out of school hours—happily, narrow limits have lately been set to the extent of such exertions—may have genuine ability, but can hardly fail to be at a disadvantage compared with the child of the prosperous artisan, who has books and summer holidays at the sea to widen his experience, together with good food to make more certain the possibility of his profiting by such experience.

Then there is the question of teaching. Many of the teachers in elementary schools, for one reason or another, are not able to give their pupils very enlightened teaching in English. On the other hand, the young enthusiastic teacher, fresh from college, conversant with good literature and with good methods may, and often does, effect wonders in the general cultural attainments of the pupil. How is the examiner to set a paper which is not a test rather of the teacher than of the pupil? It is a fact that many of the teachers are so keenly interested in their pupils that they obviously "prepare" them to the extent of preventing independent thought. For example, one year a question on proverbial sayings appears—the child is asked to explain: "A stitch in time saves nine." Next year's pupils are drilled in this sort of question. But this time they are asked to explain, say, a simple metaphor, e.g.:

"Time, you old gipsy man,
Will you not stay,
Put up your caravan
Just for one day?"

The well (?) coached pupil racks his brains to give the passage a moral twist and produces something like this: "This means that if we waste our time we shall have no money, like the gipsies." Yet the child who writes this will probably be able to parse accurately and to write a neat hand. Suppose the examiner, in pity for this type of candidate—for it is not his fault that he has been taught to parse instead of to think—should put in a question on parsing. This question at once frightens the child whose more modern teacher does not believe in parsing for children of this age, and perhaps also discourages the teacher who holds that other things are more worth while than formal grammar. Certainly, that head mistress who conducts her own entrance examination and has the question papers collected after they have been worked, shows great wisdom.

Yet the opinions of the teachers about the paper are instructive too. Naturally the examiner strongly approves of the teacher who approves of the paper. Sometimes this *does* happen. What is the examiner to say to the teacher whose comment is: "That paper was far too easy, it was no test at all for my boys; I got the head master of the secondary school to set them another paper"? If the examiner stated the facts of the case he should have said: "That is curious, for no one at your centre managed to secure more than half marks." Perhaps he said this: or perhaps, more hypocritically, he murmured that some children were more advanced than others, and it was as well for the questions to be within reach of the average child. It is not for me to reveal what he said; some examiners are more diplomatic than others!

Nowhere is the discrepancy in home surroundings and the consequent opportunity or lack of opportunity more evident than in the composition. Some children asked to describe an adventure will write a wildly improbable and hopelessly vulgar story culled from the cinema; others will evolve a fairy story full of delicate thought and fancy. It is not for the examiner to condemn too sweepingly the bad taste of a child whose opportunities are limited; when he has reached the end of his secondary school

(Continued on page 370.)

Do not make up your Scheme for next term without seeing these.

IMPORTANT NEW PUBLICATIONS

A PRACTICAL COURSE OF English Composition FOR MIDDLE AND UPPER FORMS.

By W. J. GLOVER, Author of "The New English Books."

In **Two Books**. Each Crown 8vo, cloth.

Book I. 136 pages. **1s. 9d.** Book II. 148 pages. **2s.**

Based on a collection of extracts from the **GREATEST ENGLISH WRITERS**.

The best Authorities consider that the faithful study of passages of striking yet simple beauty must stimulate the pupil's appreciation of the Art of Composition.

In the words of **THE JOURNAL OF EDUCATION**, such a course provides "the essential background of technical fundamentals, such as punctuation and accidence, as well as an imaginative feeling for atmosphere and style."

PHILIPS' HUMAN GEOGRAPHY "THE WORLD"

By JAMES FAIRGRIEVE M.A., F.R.G.S.,
and ERNEST YOUNG, B.Sc., F.R.G.S.

A new class-book prepared to meet the urgent demand for a World Geography on the lines of Philips' "Human Geographies" which have already achieved such great success. For use independently or in conjunction with the Series referred to, suitable for the lower forms of **Secondary Schools**. Crown 8vo, cloth, 232 pages. Black-and-white Illustrations and Maps, **3s.**

In preparation.

PHILIPS' HUMAN GEOGRAPHIES FOR SECONDARY SCHOOLS.

Book I.—**The British Isles.**
Book II.—**The Atlantic Hemisphere.**
Book III.—**Euro-Asia.**

Further details and prices will be published later.

New Editions, showing **NEW BOUNDARIES**.

PHILIPS' Modern School Atlas OF COMPARATIVE GEOGRAPHY

New Edition, Revised and Enlarged. 80 Plates, containing 142 Maps and Diagrams, with Introductory Letterpress and complete Index. 11 by 9 inches. **5s.** net. Now ready.

PHILIPS' New School Atlas OF COMPARATIVE GEOGRAPHY

New Edition, Revised and Enlarged. 72 Plates, containing 97 Physical, Political, and Commercial Maps, with Index. Size 9 by 11 inches. **3s. 6d.** net. Now ready.

The best Atlases obtainable at the prices.

Recommended for "Map Work" and "Mathematical Geography" in OXFORD LOCAL EXAMS.

MAP READING MADE EASY

By Captain C. C. ESSON and G. S. PHILIP, F.R.G.S.

The clearest and most instructive textbook obtainable. Enables any pupil quickly to become proficient in map reading and field work. Invaluable for Public Schools' O.T.C. Abundantly illustrated with diagrams and maps.

NEW AND REVISED EDITION. Amended for use in conjunction with the "Manual of Map Reading and Field Sketching" at the

ROYAL MILITARY COLLEGE.

Crown 4to (9½ x 7½ in.), cloth, **3s. 6d.** net.

FULL DETAILS, OR COPIES FOR INSPECTION, WILL BE SENT ON APPLICATION TO
GEORGE PHILIP & SON, LTD., 32 FLEET STREET, LONDON, E.C.4.

HODDER AND STOUGHTON, LTD. EDUCATIONAL ANNOUNCEMENTS.

THE NEW TEACHING SERIES

For Continuation Schools; Secondary Schools; Central Schools;
The Private Student; The Teacher; The General Reader.

THE NEW TEACHING SERIES IS ONE OF THE FIRST-FRUIITS OF THE NEW RENAISSANCE, AND BREATHES THE INSPIRATION OF THE HOUR'S OCCASION. IT STRIVES TO BUILD UP THE NEW HUMANISM ON THE BASIS OF THE STUDENT'S IMMEDIATE ECONOMIC INTERESTS AND ENVIRONMENT.

EVERY TEACHER SHOULD EXAMINE THESE TEXT-BOOKS BEFORE MAKING HIS SELECTION FOR NEXT SESSION. A DETAILED PROSPECTUS WILL BE SENT POST FREE UPON APPLICATION TO E. DEPT.

career he can be judged more severely. No; in this case the examiner can only judge, by what the child can make of the materials within his grasp, of his capability for seizing and absorbing other and better material.

This, then, is the examiner's task, to set questions which shall discover power rather than finish, good sense rather than good taste, promise rather than performance.—I am, Sirs, &c.,

EXAMINER FOR A COUNTY COUNCIL.

THE NEW SYLLABUS OF PHYSICAL TRAINING, 1919.

To the Editors of *The Journal of Education and School World*.

SIRS,—I have read with interest the letter on this subject by "A Teacher of the British System." He says that "the new syllabus is a confession of the failure of the Swedish System in elementary schools."

As a matter of fact the Swedish system has never been taught in English elementary schools. The existence of certain apparatus and of a clean, clear floor space are necessary for its employment. If your correspondent wishes to judge of its applicability to elementary schools, he should go to Sweden or Denmark, where he will find the necessary conditions obtain. He will have no doubt of the profit and enjoyment derived by the children.

If a journey of this length is impossible to him, he might do worse than visit an English secondary school, where he may find the system in use under a trained teacher, and be better able to judge of its efficacy. Our national economy in matters of education has never allowed the system to be tested in our elementary schools.—I am, yours truly,

Grammar School for Girls,
Maidstone Road, Rochester.
May 8, 1920.

M. A. BEARD,
Diploma, Royal Central
Gymnastic Institute,
Stockholm.

"A SCHOOL LABORATORY LIBRARY."

To the Editors of *The Journal of Education and School World*.

SIRS,—I should be very grateful if any of your readers could suggest a list of volumes dealing, in a popular but accurate way, with subjects of a general scientific interest. A well selected little library of this nature would be a valuable stimulant to the interest of young students, but I find it difficult to get just what is wanted. A few biographies of famous men of science, ancient and modern, popular accounts of the application of science to industry and manufacture, science in war—explosives, "gas" and gas masks, &c.—and so on.

The idea, generally, is to combat the misapprehension so frequently met with among pupils, and even older people, that "science" is a study that has little application outside the laboratory, and concerns itself with the pursuit of elusive things like ions or calories, or virtual images for example, the chase ending inevitably in the horrible reality of a formula involving an attack on arithmetical examples *ad nauseam*.—I am, &c.,

SCIENCE MASTER.

THE LONDON UNIVERSITY SITE.—Mr. Fisher's announcement that the Government are prepared to present the Bloomsbury site, valued at £1,000,000, to the University of London has been received with mixed feelings. It will be recollected that before the war there was much discussion about where the University should be housed. All were agreed that the Imperial Institute would not serve as its permanent home; it had been built for other purposes, and had no large hall for degree-giving functions. Three proposals were brought forward—the Bloomsbury site to the north of the British Museum, the Foundling Hospital not far from it, and one next to the new County Hall on the Thames. The two Bloomsbury sites were not favoured by any of the constituent colleges except University. The former thought that University College, if it were so adjacent to the central offices of the University, would tend to obtain a predominant voice in its counsels. But, now that King's College is proposed to be moved to Bloomsbury, that objection would fall to the ground. Another drawback was the distance from Bloomsbury from the southern and south-western suburbs, from which many of the King's College students travel daily. It is true that Bloomsbury is served by the Central London, the Piccadilly, the Hampstead and the old Metropolitan railways, but the time to be taken to reach it from Ealing or Wimbledon is still considerable. That opens the whole question of centralization or decentralization, both of which have their advocates among those who are keen on education in London. The Government offer has been referred to a Committee of the Senate of the University, and its decision will be awaited with much interest.

VICTORIA HISTORY OF THE COUNTIES OF ENGLAND.

ISSUE IN SEPARATE PARTS

This famous history is now being issued in separate parts, each sold separately, bound in strong paper, at prices varying from 2/6 upwards.

Besides histories of parishes arranged under Hundreds, articles on particular subjects are dealt with for each county and under the following headings:

Geology and Palæontology.	Maritime History.
Botany.	Political History.
Zoology.	Social and Economic
Early Man.	History.
Romano-British Remains.	Industries.
Ancient Earthworks.	Agriculture.
Domesday Survey.	Forestry.
Ecclesiastical History.	Sport.
Religious Houses.	Schools.

The Rt. Hon. H. A. L. FISHER, LL.D., President of the Board of Education, has expressed his high appreciation of this re-issue of the Victoria County History in the following letter to the Editor:—

Board of Education,
Whitehall, London, S.W.1.
8th April, 1920.

Dear Sir,

In reply to your letter of the 28th March, I am desired by the President of the Board of Education to say that he is much interested to hear that the proprietors of the Victoria County History are proposing to issue the History in parts, dealing with the natural, social, and economic history and topography of the various localities. Mr. Fisher has a high opinion of the value of the Victoria County Histories, and he will be very glad to accede to your request, so far as the Board of Education is concerned, that you should publish paragraphs 19 and 20 from the Board's 'Suggestions for the Teaching of History' in connexion with the new issue. It will be necessary for you to make formal application for permission to reprint these paragraphs to The Controller, H.M. Stationery Office, Princes Street, Westminster, S.W.1. Mr. Fisher is informing the Controller that the Board of Education have no objection to offer.

I enclose a copy of the 'Suggestions for the Teaching of History.'

I am,

Yours faithfully,

N. D. BOSWORTH SMITH,

Private Secretary.

William Page, Esq.,
General Editor of the Victoria
History of the Counties of England,
10 Orange Street, Leicester Square, W.C.2.

The History will be found of special value to teachers who are desirous of illustrating national history from local objects and incidents, a plan which is recommended in "Suggestions for the consideration of Teachers and others concerned in the work of Public Elementary Schools" issued by the Board of Education.

Apply for detailed Prospectus to
any bookseller or to the publishers.

DUSTLESS and HYGIENIC SCHOOLS

On all School, Laboratory, Library, &c., Floors and Linoleums of every description

USE FLORIGENE (Regd.)

DURING EACH VACATION for Best Results.

(BRITISH MADE.)

It is **IMPORTANT** to **NOTE** that **ONE APPLICATION** of "Florigene" **ALLAYS** the DUST and DIRT for **2 TO 12 MONTHS**, according to traffic, not only during each Sweeping (without sprinkling of any kind) but also throughout all the intervening periods—which is of greater hygienic importance. "Florigene" is also easily and quickly applied, and saves time and labour.

These sanitary, labour-saving, and economic advantages are **NOT** attained by sweeping-powders or any mechanical or other method.

THE REQUIREMENTS OF MEDICAL INSPECTION IN SECONDARY SCHOOLS.

By ALFRED A. MUMFORD, M.D., Medical Officer, Manchester Grammar School.

THE issue by the Board of Education of Circular 1153, on the Medical Inspection and Treatment of Pupils in Secondary and Continuation Schools, very soon after the issue of a revised Syllabus of Physical Training, and at a time when interest in physical training in secondary public day schools is also engaging the attention of the department of the War Office which is concerned with the supervision of officers' training corps among public schools, shows how strongly attention is being directed to the improvement of physical health and capacity. The occasion seems appropriate to consider the conditions which at present exist for estimating national physique during school life, and to ask what conclusions have been or may be drawn from existing methods of medical inspection and supervision during school life, and to inquire what further steps are necessary if full value is to be obtained from medical inspection.

The system of medical inspection in public elementary schools at present in use was designed primarily to discover whether a child was fit to attend school, i.e. to undergo the training at ordinary public elementary schools demanded by the State, or whether such compulsory attendance, by reason of physical or mental defect, would be injurious to health or unlikely to result in benefit to the child. The discovery of any defect was a preliminary to sending the child to some special school or to securing some remedial treatment. The large mass of ill-health, defect, and deficiency that had been revealed by Royal Commissions, and in the Departmental inquiries, was exciting as much apprehension as the state of popular ignorance that preceded the public support of elementary education had done some two generations ago. Attempts were therefore made to include in the medical inspection some anthropometric information which would

ensure better diagnosis of the total result of existing social conditions. Apart from measurements of stature, having an anthropometric, not a diagnostic aim, the schedule of inspection was concerned with the detection and registration of gross defects of senses or of bodily organs.

It is unfortunate that we are still without any trustworthy information as to the total effect on national physique of cooping up the children of the nation in existing buildings during the most susceptible portion of their lives. Nor is anything known of the effect on the spread of whooping-cough, bronchitis, and mild tuberculosis, &c., of confining large numbers of children within doors. Yet all these have ultimate as well as immediate consequences. Rapidly progressive pulmonary phthisis during school age is known to be rare, but localizing of tubercle to the lungs becomes common during adolescence and early adult life. We ask in vain for the proof that the health of children has been so considered during school life that they may pass these storm periods in safety. The Registrar-General's reports of mortality contain little to support the roseate statements of many school medical officer's reports. Complaints of over-pressure in public elementary schools are now rarely, if ever, heard; compulsion to attend seems the prime hardship experienced; yet, though St. Vitus's Dance rarely receives much consideration among school officers' reports, it is of very common occurrence among patients attending children's hospitals and dispensaries.

The efforts of the Board of Education to improve public health have not been confined to the removal and subsequent treatment of children discovered to be unfit to attend ordinary schools. They have taken positive measures to improve national physique by the issue in 1905 of a syllabus of physical training, with a valuable, though imperfect, introductory chapter on certain physiological aspects of school life. This syllabus of training seems to have been largely inspired by the findings of the Interdepartmental Committee on Physical Deterioration. Unfortunately, though presumably the school medical officer possesses some power of criticism of physical training, and some oversight of playgrounds, no satisfactory attempts seem to have been made to correlate physical training with the medical inspection. In the brief and non-committal summary of results of the ten years' medical inspection—1908–1917—which is included in the report of the Chief Medical Officer of the Board for 1917, perhaps the most suggestive statement occurs in a foot-note, page 172, where regret is expressed that opportunities have not been found by local authorities for the furtherance of anthropometry (a matter which is taken up with so much enterprise and advantage by the central authority in America), and by the failure of local authorities to establish more satisfactory physical and mental standards for medical inspection. Whether this implies that the Board is waiting for inspiration from without, and will encourage criticism of its own standards, does not appear.

It is here that we see the weakness of the present system of medical inspection in schools, and the disadvantages that follow the lack of a research department at the Board which is able and willing to assist in the setting up of a system of clinical and physiological standards of bodily vigour and capacity. In the absence of such a research department, a system of medical inspection and supervision adapted to control the set of social conditions found prevalent in public elementary schools is applied without adequate inquiry to the quite different problems found in public secondary schools. But, whether established locally or centrally, there is great need for such a research department. Much of the material for forming appropriate standards of health already exists, partly in our own country and partly in America. The reports on physical training in Australia by Colonel Bjelke Petersen, published in 1914, provide a model of work according to standards of growth, which might well have been copied, or at least referred to, both by the War Office in the O.T.C. regulations and by the Board of Education in the recently issued "English Manual of Physical Training," though in the latter a beginning of such standardization has been begun in the special chapters relating to children under seven.

But to return to our inquiry as to the relation between national health and medical inspection in schools. We have seen that medical inspection in elementary schools is called upon to deal with an unsorted mass of the population compelled by law to attend school, and among whom disease, deformity, and defects are rife. Injurious effects of indoor life frequently occur. Cleanliness is variable, and infection—non-notifiable even more than notifiable—is common. Mild tubercular infection, though almost universal in towns, is rarely dealt with, and St. Vitus's Dance almost never. Medical inspection in secondary schools is called upon to deal with a selected mass of the population, inspired by higher purpose, where disease, defects, and deformities are of less frequent occurrence, and, when they do exist, have often already received spontaneous attention by parents, or in reply to information derived in the elementary schools previously attended. In secondary schools, where an ever-increasing effort is called for, and greater strain is imposed, a sorting out according to grit and ability takes place during the whole of adolescent life, by which each is, or should be, assisted to enter on that course of work which is most appropriate to him. Standards of efficiency, mental and physical, rather than marks of disease, now become needed, so that, while the fully equipped may be furthered, the defects that prevent attainment by the less well equipped may be recognized and dealt with while they are remediable. Medical supervision needs to be in close touch with the gymnasium, the playing fields, and the swimming bath, as well as with the class teaching. The medical inspector has much detail to learn from, and much to impart to, the physical instructors and the class teachers. Clinical medicine, public health, and teaching experience need to be co-ordinated.

It may be claimed that the records in height, weight, and chest girth, for which provision is made on the authorized schedule, though of limited value in estimating the vigour of the individual during early childhood, may serve as the basis for establishing standards of growth during adolescence. In the hands of specialists, groups of such figures may be made to yield useful information; even individual records may be of high value in the case of such detailed studies as those introduced into Haileybury by Mr. Cecil Hawkins; but, in the hands of the average and often overworked official, who cannot be a specialist, the making of them is merely a waste of time. Records of difference between inflated and deflated upper chests, as usually taken, seem at first to offer some help to estimate physique. They have long been used to serve as a basis for estimating physical vigour among adults seeking admission to the fighting forces, and for estimating vitality among candidates for life assurance. Among children, they are not of great value. An exaggerated range of upper costal movement often covers a failure to use the more fundamental diaphragmatic or lower costal breathing, a condition common among children suffering nasal obstruction. To get satisfactory knowledge of chest movements, a much more thorough examination is necessary.

It is, however, when we come to consider the third group of facts, entitled Disease and Defects, to be observed by the examining school doctor, that we realize how much the schedule, which was organized for detecting established disease among children in unsorted elementary schools, falls short of the need of medical inspection and supervision in secondary schools, if it is to do more than exclude the physically unfit from attendance at the school, assist the child with defective eyesight to get glasses, &c.; that is, if it is to help the teacher to estimate the capacity of the pupil to sustain the prolonged mental effort required in preparing and passing higher examinations, and to sustain without injury the prolongation of semi-sedentary school life through the period of adolescence.

The standards of the schedule in front of us are based on the detection of such disease or deformities of the chest and lungs, the heart and the blood, of the nervous system and spinal musculature, &c., as should exclude the child from attending school. By concentrating our attention on these defects, there is a great tendency to forget that their recognition is of value only in so far as they illustrate the existence of extreme conditions. They do not provide information of

minor conditions of imperfect functioning of organs needed when we specialize effort. They are, therefore, of little value in helping us to estimate the powers of functioning which are available for school work. Attention is directed, but without any guiding comment, to the detection of signs of overstrain: but the general causes of fatigue, such as distance of school journey, hours of sleep, arrangements for feeding, and many other points which were brought out by the Committee reporting on Industrial Fatigue, which are of very profound importance to the adolescent school boy or girl, are not mentioned. A Research Department at the Board of Education would have drawn attention to the use of the spirometer, the U-manometer fatigue test, and other functional tests already in general use and available for the scholars of fifteen and onwards. Their value as tests of endurance have been proved by the medical advisers attached to the Air Force, and they offer a basis for a much more satisfactory schedule of medical inspection for the higher secondary schools than we at present possess.

Perhaps the greatest disappointment that is felt by all interested in medical inspection among elementary school children is caused by the failure of existing methods to deal adequately with mild tuberculosis and with St. Vitus's Dance, diseases occasionally combined, more often at opposite ends of the pole, both involving present suffering and danger to future health; the one by early breakdown into pulmonary phthisis, under the stress of occupation; the other by ingravescent heart trouble and emotional waste or lack of will power. Either is easily detected by means of a searching and leisurely clinical examination in the consulting room, and both are probably more readily recognized by the highly instructed teacher in the classroom than by the hurried and overworked official, for it is only by failure of the pupil to exhibit vigour or to sustain effort during school hours, or in the playground and gymnasium, that these diseases declare themselves.

Among the children who attend public secondary schools, the detection of the cause of failure of the many to attain in the classroom, the playground, and the gymnasium is therefore of far greater importance than the measurement of height and weight and the detection of gross disease among the very few. Established disease and neglect of attention to defect of sense organs, so common in certain elementary schools in poor class districts, is only an occasional cause of failure to attain in secondary schools. They are far less liable to escape early detection by the parents than in elementary schools. Failure from physiological causes, on the other hand, is detectable only by physiological tests of endurance and of the onset of fatigue. It becomes far more common and evident in adolescence.

Consequently, the establishment of standards of attainment and performance, which will serve as a basis for medical inspection, constitute an urgent matter in secondary school life. For these standards we must look to university research or to a central research bureau to which the Board of Education should have access. Many English universities have special facilities in education, and "research" is the demand of the day. May we look to English universities or to the Board of Education, or shall we have to wait for enlightenment from America, or the universities of a rejuvenated and re-inspired Germany?

RE-EDUCATING WOMEN.—The re-education of women workers to fit them to take their part in a reconstructed world is proceeding apace. Not only are there now in active operation 179 training centres for women ex-war workers under the Ministry of Labour, but the whole organization of the Central Committee on Women's Training and Employment is being devoted to the training of women in the higher branches of work for which there is a demand. Many occupations are being starved for workers because the unemployed are persons without special skill. Such, for example, is the teaching profession, which could absorb thousands of women teachers. The resources of the Committee are wide, while the funds at its disposal amount to more than £500,000. Women desiring to obtain training and maintenance during the period of tuition should apply at once to their local Employment Exchange for the Committee's Application Form.

LETTER-WRITING.

By AMY CRUSE.

A FEW years ago it was held as a truism that letter-writing, except in the hands of a select few, was a lost art, and the rush of modern life made it seem improbable that the lost art would one day be recovered. Yet now there are signs that this may come to pass, and that the age which lies before us may see our children creating with joyful ease those masterpieces which our own generation was too busy or too lazy to achieve. Much of this new interest in letters and facility in letter-writing is due to the war, something also to the intense and almost universal desire for self-expression which is characteristic of the age. But there is no doubt that they exist, and it is for the teacher to see that they are made operative to their fullest extent in the schoolroom.

To this end, the first thing to be done is to transfer them, living and uninjured, to their new sphere of action. The war has to a large extent set the child free from the more or less well defined letter-writing convention in which he was brought up, but its ghost still haunts him when he sits down to write a letter in school, and makes him hesitate as to whether it is quite proper to put down in a school exercise the little homely details which, in a letter to a far-off father or brother, seemed natural and right. It is for the teacher to lay this meddlesome spook, and to convince the pupil that these small matters are the stuff of which true letters are made; and then—and this is the second great step—to show him how to use his material deftly and effectively, building up something which has shapeliness and beauty, as well as the mere utility of a news carrier.

The best way to do this is by means of examples, and here is the opportunity to lead the pupils into a most delightful by-path of English literature. There are so many charming letters available that the only difficulty lies in making a choice. Take, for example, the seventeenth century collection of love letters—so enthusiastically praised by Macaulay—written by Dorothy Osborne to Sir William Temple. They tell, for the most part, of the everyday life in a quiet country house. Mistress Osborne has her theory of letter-writing:

All letters methinks [she says] should be free and easy as one's discourse; not studied as an oration nor made up of hard words like a charm. 'Tis an admirable thing to see how some people will labour to find out terms that may obscure a plain sense. Like a gentleman I knew, who never said "the weather grew cold," but that "winter began to salute us." I have no patience for such coxcombs, and cannot blame an old uncle of mine that threw the standish at his man's head because he writ a letter for him where, instead of saying, as his master bid him, "that he would have writ himself, but that he had the gout in his hand," he said "that the gout in his hand would not permit him to put pen to paper."

And her practice is admirably in accordance with her theory. See in what simple words she can convey to a tired London lawyer the fragrance and peace of a country summer evening:

About six or seven o'clock I walk out into a common that lies hard by the house, where a great many young wenches keep sheep and cows, and sit in the shade singing of ballads. I go to them and compare their voices and beauties to some ancient shepherdesses that I have read of, and find a vast difference there; but, trust me, I think these are as innocent as those could be. I talk to them, and find they want nothing to make them the happiest people in the world but the knowledge that they are so. Most commonly, when we are in the midst of our discourse, one looks about her and spies her cows going into the corn, and then away they all run as if they had wings at their heels. I, that am not so nimble, stay behind, and when I see them driving home their cattle I think 'tis time for me to retire too.

Then there are Charlotte Brontë's letters, dealing often with even more homely details. This is how she writes from Brussels to her sister at home:

I should like uncommonly to be in the dining-room at home, or in the kitchen, or in the back kitchen. I should like even to be cutting up the hash, with the clerk and some register people at the other table, and you standing by, watching that I put enough flour,

not too much pepper, and, above all, that I save the best pieces of the leg of mutton for Tiger and Keeper, the first of which personages would be jumping about the dish and carving-knife, and the latter standing like a devouring flame on the kitchen floor. To complete the picture, Tabby blowing the fire in order to boil the potatoes into a sort of vegetable glue.

Some people can write interestingly on any subject—even, like Robert Louis Stevenson, on the weather:

Some very violent squalls came as we sat there [he says], and everyone rejoiced; it was impossible to help it: a soul of putty had to sing. All night it blew; the roof was continually sounding under missiles: in the morning the verandahs were half full of branches from the forest. There was a last very wild squall about six; the rain, like a thick white smoke, flying past the house in volleys, and as swift, it seemed, as rifle balls.

A few examples such as these ought to shake the pupil's faith in set phrases and polite circumlocutions. If he is so closely bound by shyness or by habit that he still fails to make his letters real, his emancipation may, perhaps, be helped by group work in letter-writing. The present writer once tried an experiment of this kind which proved immensely interesting, and gave excellent results. The class, a small one, was divided into two sections. Each section represented a family, the pupils themselves deciding particulars concerning numbers, dwelling, &c. First, Group No. 1 wrote a letter, as from one particular member of the family represented; this was answered the following week by a member of the family represented by Group No. 2; and so the game went on. The letters were the work of the entire group, who had two half-hours of school time allowed them each week for consultation, but who actually took a great deal more, the subject being discussed with great eagerness in every free moment. This was continued throughout one term; but long afterwards the play was kept up by the pupils. The characters grew up, married, and established themselves as heads of families before interest in them finally died out.

The drawback to such a plan is, of course, the danger that the work may fall into the hands of two or three eager children, and the diffident pupils do little or nothing; but if real interest can be aroused it is almost certain that each one will do at least enough to discover that letter-writing is more than a dull formality; and the slow minds will be stimulated by working with those to whom exercise is a joy.

To return to the examples. For the well-worn subject, "How I Spent my Holiday," there can scarcely be a better model than Charles Lamb's letter describing his visit to Coleridge at Keswick, and his delight at the first sight of the mountains lying around, "like great floundering bears and monsters, couchant and asleep." Or, in another vein, there is Charles Dickens's account of how he took four schoolboys for a picnic down the Thames, "accompanied by two immense hampers from Fortnum and Mason's"; how they "dined in a field," "had tea and rashers of bacon at a public-house, and came home the last five or six miles in a prodigious thunderstorm. This was the great success of the day, which they certainly enjoyed more than anything else." From these letters the pupil may learn something of the art of selection, for lack of which many exercises of this class become mere wearisome catalogues. It is sometimes a useful exercise for the pupils to make a list of the incidents which they think the writer has omitted in his account of a day's holiday, or for the teacher to give a list of possible points for a letter, and for the pupils to select which shall be dwelt upon, which merely mentioned, and which entirely passed over. They should also have practice in summarizing, giving in few words a complete and vivid picture, as Fitzgerald did when he wrote:

Here is a glorious sunshiny day. All the morning I read about Nero, in Tacitus, lying full length on a bench in the garden; a nightingale singing, and some red anemones eyeing the sun manfully not far off.

There is another class of letter which describes in fullest detail a single incident; as, for example, that of William Cowper describing the escape of his tame hare, Puss: "I hastened into the kitchen, where I saw the redoubtable

Thomas Freeman, who told me that, having seen her just after she had dropped into the street, he attempted to cover her with his hat, but she screamed out and leapt directly over his head"; and so on through all the exciting details of the chase and recapture. It is useful to read these letters in conjunction with those of the previous group, that the difference in treatment may be noted. The pupils may be asked to take a briefly described incident, as, for example, that given by Robert Louis Stevenson in a letter enumerating the trials connected with life in Samoa: "A little while ago it was the carpenter's horse that trod in a nest of fourteen eggs and made an omelette of our hopes"; and enlarge it into a detailed account.

Mr. E. V. Lucas calls his anthology of famous letters (from which some of the examples quoted have been taken) "The Gentlest Art," meaning, perhaps, that it is the art which requires for its successful practice those qualities of urbanity, friendliness, and sympathy, which can only exist in communities. From this point of view it is clear that the study of letters tends to the development of the civic virtues—which gives to it an added educational value.

UNIVERSITIES AND SCHOOLS.

WALES.

The half-yearly meeting of this Association was held at Aberystwyth

Welsh County
Schools
Association.

on Friday and Saturday, May 14 and 15. There was an excellent attendance of head masters and head mistresses of secondary schools, with Miss Vivian, of Newport School (the President) in the chair. Mr. W. Edwards, the Chief Inspector of the Central Welsh Board, was also present to discuss with the Heads the changes in schedules and regulations of the Senior and Higher Examinations, which it is necessary to introduce for the year 1920-21, in order that these tests may conform with the conditions laid down by the Examinations Council.

All through the discussion it was evident that a determined effort will be made by the schools to preserve as far as possible the elasticity and freedom of the present regulations, and that they were not prepared to sacrifice any principles as the price of recognition by the Examinations Council. The conditions governing secondary education in Wales are in many respects peculiar, owing to the claims of the native language, and, therefore, it is only right that such matters as grouping of subjects and so on should be considered very carefully. On one or two important points, the Association was strongly opposed to the recommendations of the Executive Committee of the Central Welsh Board, so that it will be interesting to know what views the half-yearly meeting of the Board itself at Barmouth will adopt on the questions.

Mr. H. Rees, Head Master of Ystalyfera School, initiated an important discussion on the relationship of the intermediate schools to the new types of schools which it is proposed to create in Glamorgan under the Education Act of 1918. This county has drawn up a scheme which involves the erection of thirty-three new secondary schools for pupils between the ages of twelve and sixteen, and it is therefore most important that their reaction on the existing schools should be carefully discussed from every point of view. So far as it is possible to judge from the meagre details now available, these schools will in the main be secondary schools of the usual type, preparing the pupils for matriculation and similar examinations, and therefore to this extent overlapping the intermediate schools, and, as they will be free, the possibility of danger to the latter type of school is obvious. The function of the intermediate schools, which are to continue to be administered under the existing schemes, is to educate pupils from twelve to eighteen mainly for universities and professions, and an effort will be made to establish an advanced course in each of them. In other words, they are to become "class" schools—a type for which there is but little demand in democratic Wales.

The Association thoroughly agreed that the problem in Glamorgan owing to the huge population is very complicated, and that a large number of new schools must of necessity be provided to meet the demands of the Act, but a strong body of opinion existed that the curricula of the two systems of schools should be carefully differentiated to prevent waste and inefficiency. On the other hand, it was pointed out that the working man is not prepared to acquiesce in what he might consider an inferior type of secondary education and that he will insist on a fairly complete curriculum for his child. The

cost of this scheme is estimated at about £5,500,000, so that the ratepayers will possibly pause before they adopt it in its entirety.

The ex-president, Mr. A. Lyon, of Hawarden School, delivered his postponed presidential address on Art and Music in the Intermediate Schools, in which he traced the history of music in such schools as Eton and Westminster from the fifteenth century onward, proving the prominent position it held in the curriculum of those days. He made a strong plea for a more real study of music in the modern secondary school, and at the same time outlined a plan by which it was possible to incorporate it in the time table without detriment to the usual subjects. In this connexion, it may be stated that a new hymn and tune book is in course of preparation, containing both English and Welsh hymns, and that the Council of Music are also about to issue a Welsh song book suitable for Welsh schools.

Miss Vivian (Newport), the President of the Association, and Mr. D. E. Williams (Gowerton) have been invited to act on the Committee of the four Associations dealing with salaries in secondary schools, and they have accepted the invitation.

A strange situation has arisen in connexion with these two schools.

Pengam Schools.

There has been a long-standing dispute between the counties of Monmouth and Glamorgan as to their maintenance, as they are situated on the border of the two counties. The schools are entirely controlled by Glamorgan, but about half the pupils come from Monmouthshire, and therefore it is claimed that the latter county should bear a proportion of the cost of the upkeep of the schools; but so far it has declined to do so, because it has felt aggrieved over the distribution of the Lewis charities by which these schools were formerly endowed. A crisis has at last been reached in the finances of the schools, as there is now an annual deficit of about £4,000, but Glamorgan does not feel justified in granting a subvention from the rates to meet it, as it would be largely used in educating Monmouthshire pupils. The school governors, who are responsible for the salaries of the staff, have therefore taken the bold step of terminating their engagements at the end of the present term, as they have no money to meet their liabilities. This resolution will probably have the effect of compelling the two counties to find a solution of the difficulty, as it is out of the question for schools of this standing and importance to be closed merely on a dispute arising out of allocation of funds. Such a step would be disastrous in its effect on education in the Rhymney Valley. At a public meeting held at the Lewis Schools it was agreed to send a deputation to each of the counties to explain the position.

Senior Certificate, Central Welsh Board.

This examination has now been recognized by the Board of Education as an approved First Examination. The fee of 7s. 6d. hitherto charged to the pupils will now be paid by the Board of Education, and, according to the arrangements suggested by the Board, this sum only will be paid direct to the Central Welsh Board, the remainder of the allotted fee (£1. 12s. 6d.) being paid direct to the governors of the school for each pupil entered for the examination. This plan has come as a complete surprise to the great majority of the members, and it is likely to be severely criticized. The fee (7s. 6d.) for the certificate is extremely low, and does not, under present conditions, represent the expense which the Board incur in connexion with the award of the certificate, and it therefore scarcely seems fair to pay back to the Central Welsh Board merely this small proportion of the total sum of £2 intended to meet examination charges. The Central Welsh Board, therefore, under the suggested distribution gain nothing, and, on the other hand, it is not at all clear why the school governors, who undertake no new responsibilities, should benefit to the extent proposed.

Salaries.

Both in Carnarvonshire and in the Rhondda satisfactory arrangements have been arrived at with regard to the teachers' salaries. In the former, the Burnham scale will be adopted as from January 1, 1920, with certain modifications. In the Rhondda, the Education Committee have agreed to receive a deputation of six from the teachers, and the notices terminating their engagements have now been withdrawn. The teachers demand the adoption of scales similar to those already in existence in Cardiff, Barry, and Swansea.

Swansea College.

The announcement that the King proposes to visit South Wales in July has given great satisfaction. It is expected that one of the functions which His Majesty will perform will be that of laying the foundation stone of the new University College at Swansea. The local education authority have given several acres in Singleton park for the use of the College, and it is expected that arrangements will be sufficiently advanced by July to enable the King to perform this ceremony during his visit. If this can be done, the College will receive an excellent start, and it is more than probable that an increasing number of the industrial magnates of the district will rally round it.

It is proposed to commence with the Science and Technological courses next October in the premises of the Technical College, but it is

not likely that the Arts side will be opened till 1921. The first meeting of the Court of Governors will be held on May 31, when the President and Vice-President, as well as sixteen members of the Council, will be elected. After this meeting has been held, substantial progress should be possible.

Mr. Morgan Watkin has been appointed Professor of French at the University College, Cardiff, in succession to Prof. Barbier, who is retiring after a long period of service. Mr. Watkin has had a distinguished as

well as a romantic career. He graduated with a brilliant first-class honours in French in the University of Wales and in the University of Zurich. He is an old pupil of Prof. Barbier.

SCOTLAND.

Announcement is made of a Sectional Congress of the Institute in Moray House, Edinburgh, on the first Friday and Saturday of June. On the Friday night a conference on the training of teachers is to be held, the basis of discussion being a series of proposals emanating from an Institute Committee which

has been in consultation with the teacher members of the Provincial Committees. On the Saturday morning there will be a common meeting to be addressed by Sir Donald Maclean and to have a lecture on "Music in the Schools" from Mr. Hugh S. Robertson, the well known conductor of the Glasgow Orpheus Choir. In the afternoon, fourteen sections concerned with the interests of the various groups of teachers will meet. In this Sectional Congress, the Secondary Education Congress which was so successful in the years just before the war, and did so much to foster the spirit of union among teachers, reappears in a larger and more comprehensive form. The subjects of the secondary school are all down on the syllabus, and, in addition to these, the primary subjects and special subjects of one kind or another. The idea behind the Congress is admirable. It is well that teachers should have an opportunity of meeting together as specialists under conditions which always keep to the fore the deeper unity of education.

The great increase in membership which has resulted from the unification of all sections of Scottish teachers in the Institute has brought some problems of administration in its train. With teachers more conscious

than ever before as to the possibilities of professional action, there has come a very considerable accession of matters with which the Institute must deal. The result is that the officials are over-taxed, and the Council, which was formerly able to do all its business at leisure, is now hard put to it to get through its work in any fashion. This last month for the second time this year the Council had to adjourn till a later day—a rather serious business for a body that draws its constituents from every part of Scotland. A special committee has been sitting on the question of procedure and has made various recommendations, but the difficulty goes deeper than procedure. It is possible that the Council may be compelled to cut down the number of its members drastically and adopt a constitution similar in this respect to that of the N.U.T. The number is to be reduced to sixty next year, but even sixty is too large a number if many of the sixty are disposed to talk.

The tests in arithmetic promised by the Education Research Committee of the Institute have now made their appearance. The idea is that these tests should

determine standards of attainment at the qualifying stage when pupils are ready to pass on to the higher grade and supplementary courses. It will perhaps come as a shock to some teachers to discover that four out of the six tests are concerned with the simple operations of addition, multiplication, subtraction, and division; but, in view of the general agreement that inaccuracy in these is very common among older pupils, this emphasis on the mechanical side of arithmetic should be quite salutary if it does not lead some teachers to revert to the old grind work that aimed at nothing more than the mechanical results. The other two papers on mental arithmetic and problems—the former requiring a simple working knowledge of money and the ordinary measures, the latter an interesting collection of sums out of the beaten path—are likely to correct any tendency in a wrong direction. The establishment of standard results in regard to accuracy and speed, such as are obviously contemplated, will be a great boon to teachers of arithmetic in the primary school.

The first meeting of the National Committee was held in Edinburgh at the end of April, and delegates were present from every education authority in Scotland. Mr. Munro, who presided, said that the main difference

between the new body and the provincial committees which preceded it lay in the fact that it had financial as well as administrative authority, and thus could act with a freedom from the restrictions which had inevitably hampered the provincial committees. He added that the view of the Education Department that it was not necessary to provide special representation for the Churches had been fully justified by the

constitution of the Committee. Of the 47 elected members, a majority were clergymen. As the new system could not come into operation till the provincial committees had met and elected chairmen, he thought that the transfer of powers from the existing committees could not be made till some time about the beginning of August. The Committee then proceeded to the election of a chairman. Prof. Darroch, Dr. John Smith, and Provost Keith were the candidates, and Prof. Darroch secured the final vote.

As the real business body for the government of the training colleges, the Central Executive Committee is of much greater consequence than the National Committee. It is fortunate that those elected are likely to give general satisfaction to all concerned. The eight

members elected by the National Committee are most of them progressive. Among them are Sir Richard Lodge of Edinburgh University and Miss Bannatyne of the Glasgow Authority. The two teacher members are Dr. C. S. MacPherson of Banff and Miss Skinner of Dundee; Glasgow and Edinburgh teachers, usually so conspicuous on all Committees, are this time not represented.

In view of the development of medical science and practice, the General Council of Glasgow University appointed a number of committees last year to consider the medical curriculum. These committees have now

reported, and their reports, if not very weighty, are at least interesting. The most important findings are in regard to the curriculum as a whole. The proposal to extend the period of medical training to six years is rejected; so also is the idea of extending the terms of the academic year. It is recommended that, in order to get an extra three months added to the course, and to allow physics and botany to be taken before chemistry and zoology, all students should begin their studies in the summer term. Further it is recommended—contrary to the judgment of the teacher members on the committee dealing with Preliminary Studies—that to allow this earlier start the Leaving Certificate Examinations should be held in the schools in December as well as at Easter. To simplify the examination system, the committee thinks that, subject to the approval of the external examiners in regard to standard, students getting 60 per cent. of the marks in class work should get dispensation from the professional examinations. Perhaps the most valuable suggestions in the reports concern post-graduate instruction of the teachers who have to do with the preliminary science training of the pupils in school and of medical graduates. It is strongly recommended that the University should take an active part in organizing post-graduation medical teaching, and that, in order to encourage graduates to prosecute their studies and give some status to the teaching, the University should institute a diploma or certificate in certain special subjects.

Following the course already taken by the other three Scottish universities, and by nearly all British universities,

Ph.D. and D.Phil. Aberdeen University has prepared an ordinance for a Ph.D. degree similar in general character to the Doctor's degree which formerly attracted so many candidates to the universities of Central Europe. A difficulty in the way of the new degree is the existence in the Scottish universities of a Doctorate in Philosophy (abbreviated to D.Phil.) on a higher standard than the proposed Doctorate. Glasgow and St. Andrews have taken the logical line of abolishing the D.Phil. and widening the D.Lit. to take in philosophy. Edinburgh has still the two degrees. In the new ordinance Aberdeen follows Edinburgh. The General Council have protested against this, however, and it is not improbable that heed will be given to the protest, and the obvious course of having but one Doctorate in Philosophy be followed.

IRELAND.

Secondary education in Ireland has reached an acute crisis. During the month that elapsed between Mr. Macpherson's resignation and Sir Hamar Greenwood's taking up of his position as Chief Secretary, events have moved with tragic rapidity, and the only thing which can save the situation is a bold and immediate declaration by the Government that they will come to the rescue, and recognize their duty towards education as a State duty in a manner commensurate with its importance and with its treatment in Great Britain. Mr. Macpherson took a genuine interest in the Education Bill, and teachers were relying on his promise to pass it. No doubt the opposition was formidable, but Mr. Macpherson's statements were made with a full knowledge of this fact. But Mr. Macpherson has gone, and teachers found themselves planted not on a firm rock, but on a moving bog, and their hopes have sunk accordingly. This month sees the close of the Irish school year, and the schools are naturally asking: What of next year? What will their position be after the summer? In answer to Sir E. Carson in the House of Commons, Mr. Bonar Law has replied that the Government intend to go on with the Bill, but cannot name a date for the second reading. But everyone knows that the Government have their hands very full with

legislation this year and that they are also anxious to avoid an autumn session. Even the most optimistic teachers may therefore feel anxious about a Bill which makes no progress and wonder what are the prospects of secondary education next term. On the other hand, they know that there is a dearth of teachers in England, and that the prospects there—apart from pensions, which at present are practically non-existent here—are vastly better than anything possible without the Bill in Ireland.

An exodus of teachers from Ireland to Great Britain is not only possible, but certain; the only question is as to its dimensions. It has already begun; even during the past year several important schools have found it difficult, and sometimes impossible, to fill vacancies. The movement could be checked by an early and clear statement by the Government that they will give to intermediate education, and to Irish education generally, the Treasury grants which are due and are definitely allocated to Ireland in the Bill. If the Government hesitate until the summer comes and the vacation has commenced, it will be too late. It will not be easy then to repair the damage. Many teachers will have gone by then, and some schools will be definitely closed. Teachers who cannot live on their salaries, and schools which are already deep in debt, cannot go on living on uncertainties when certainties are obtainable across the water. Perhaps Sir Hamar Greenwood will have faced the question and found a solution before these lines appear, but if not, the omens are inauspicious. In the first week of May, the Catholic lay teachers in Cork intermediate schools went on strike, and in the second week the Assistant Masters' Association (of Catholic lay teachers) ordered a strike of all its members all over the country. They had negotiated with the head masters of the Catholic schools, but, in the absence of increased grants from the Treasury, no satisfactory offer could be made. A settlement was, however, effected at the last minute with all the Catholic schools except those of the Christian Brothers, and from these the lay teachers have been withdrawn by the Association.

The question is naturally asked: Failing Government intervention, is there any remedy for the present crisis? There is no possible reform of education without an Act of Parliament. For example, so long as the present system of grants prevails, largely based upon the results of examinations, there can be no scale of salaries such as the Molony Committee recommended, nor any system of pensions. A general increase in the school fees is often suggested, and this would afford some relief in large schools. But the difference in small schools would not be great, and although, in the absence of a local rate for education, it is only fair that schools should rely on increased fees, it would be unsatisfactory that in Ireland, where extended education is more needed, it should be restricted by higher fees than in English and Scottish secondary schools which are aided by the Treasury. Then, again, in schools like those of the Christian Brothers, to charge more than a nominal fee would be contrary to their principles.

The Lord-Lieutenant has appointed the Protestant Archbishop of Dublin and Prof. Savory, of Queen's University Belfast, to be members of the Intermediate Education Board, in place of the late Dr. Mahaffy and Mr. Martin, of Belfast.

The Intermediate Board announce that they will hold summer courses in July. This is a new venture by the Intermediate Board, and is made possible by the conditions of the Duke Grant, which allow them to spend up to £2,000 on this object. The courses will be in English, mathematics, and French (including phonetics); and, as for the summer courses of the Department, teachers attending will be allowed £5. 5s. towards their expenses.

The Board have also issued their Rules and Programme for 1921. Had the Education Bill passed, there would have been a new scheme of education for next year, but, as it is, the Programme of Examinations is mainly, but not altogether, a repetition of that set for 1918. In the Rules the only important change we have noticed is in reference to the inspection grant on pupils between twelve and fourteen years of age. Up to now all attendances of such pupils counted, but now one hundred attendances are fixed as the standard on which a full grant will be paid, the same principle being adopted as for pupils above fourteen—a distinct improvement. In the case of pupils making between fifty and one hundred attendances between the ages of twelve and fourteen, half a grant will be paid.

University College, Dublin, announces that its summer courses, which have been interrupted during the period of the war, will be resumed this year. They will be given by professors and teachers of the college, from July 13 to July 30, in the following subjects:—Modern languages and phonetics, English, history, geography, classical archaeology, certain branches of mathematics, physics, education, and methods of teaching. Courses will be open to all teachers who apply for admission, without entrance fee.

Trinity College, Dublin, proposes to augment its teaching staff by

(Continued on page 380.)

A Selection from MESSRS. HARRAP'S LIST OF NEW AND FORTHCOMING PUBLICATIONS.

HARRAP'S INTRODUCTORY ALGEBRA.

By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh.
Crown 8vo, 172 pages, with Answers, 2s. net. Also without Answers, limp, 1s. 9d. net.

FROM THE PRINCIPAL OF A PREPARATORY SCHOOL: "I hope the book will have the success it deserves, for of the large number of elementary Algebras I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."

ENGLISH.

STUDIES IN LITERATURE.

By F. H. PRITCHARD, Author of *English Extracts and Exercises*.
Crown 8vo, 208 pages, 2s. 6d. net. *Prospectus free on application*.
This volume follows the author's previous work, and provides a more advanced and detailed course.

"A skilful choice of passages of alternate poetry and prose, with comments pointing out their special qualities, makes up an interesting manual for students. Each selection is followed by a number of exercises and references for comparative reading."—*Times Educational Supplement*.

AN ANTHOLOGY OF RECENT POETRY (a New Book of Verse).

Selected by L. D'O. WALTERS. Crown 8vo, 128 pages, limp, 1s. 6d. net.
This selection contains only the work of poets of to-day, and it is specially designed for use in schools. More than fifty poems are included.

ECONOMICS.

THE REAL WEALTH OF NATIONS.

Or, A New Civilization and its Economic Foundations. By JOHN S. HICHT, Fellow of the Royal Economic Society. Demy 8vo, 400 pages, with Index, 15s. net.

This is a timely book, which, by showing the utter fallacy of the law of supply and demand, discloses the fact that all the wealth in the world is due to the skill and brains of those engaged in production. Consequently, exchange cannot add to wealth, but merely represents a transfer thereof. As a further consequence it follows that the interests of the producers, both employers and employees, are totally opposed to those of the handlers of wealth.

HISTORY.

WEBSTER'S EUROPEAN HISTORY.

With many Illustrations and Maps. *Just ready.*
Part I. ANCIENT TIMES. To the Fall of Rome. Demy 8vo, 342 pages, 6s. net.
" II. MEDIEVAL AND EARLY MODERN TIMES. From the Fall of Rome to the French Revolution. Demy 8vo, 450 pages, 7s. 6d. net.
" III. MODERN TIMES. From the Age of Louis XIV to 1919. Demy 8vo, 350 pages, 6s. net.

The above three volumes by Prof. Hutton Webster, Ph.D., form a complete course of history for the middle and upper forms of secondary schools. The volumes are very fully illustrated, and a suggestive series of questions is added to every chapter.

A Prospectus will be sent on application.

MEDIEVAL AND MODERN HISTORY.

By Prof. HUTTON WEBSTER. 824 pages, 250 Illustrations and 100 Maps. Demy 8vo, 10s. 6d. net. *Prospectus on application.*

HISTORY OF THE UNITED STATES.

LONDON: GEORGE G. HARRAP & CO., LTD., 2 & 3 PORTSMOUTH ST., KINGSWAY, W.C.2.

Directors: George G. Harrap & G. Oliver Anderson,

appointing lecturers to assist its professors. It has already done this in mathematics and is extending this arrangement to other subjects. The lecturers will be appointed for three years and may be reappointed permanently at the end of that period. The salary offered for the first year will be £100, for the second £200, and for the third £215. If re-elected the salary will increase by increments of £15 a year to £350. The lecture hours will be ten a week.

A meeting of Convocation of the National University held last month in University College, Dublin, passed a report from its committee that, having considered the relation of the primary and secondary teaching profession in Ireland to academical training and education, general and professional, it advises that full opportunities should be provided for both groups of teachers to obtain university degrees and professional qualifications in the National University of Ireland, and that this should be pressed as a matter of urgency on the attention of the Senate.

The Senate of Queen's University, Belfast, have decided to institute

Belfast.

a new statute for diplomas in dentistry—viz., Licentiate in Dental Surgery (L.D.S.), Bachelor of Dental surgery (B.D.S.), and Master of Dental

Surgery (M.D.S.), based upon courses of study and examinations in the University, which are to be in accordance with the rules made from time to time by the General Council of Medical Education of the United Kingdom.

SCHOOLS.

LONDON (ROYAL FREE HOSPITAL) SCHOOL OF MEDICINE FOR WOMEN.—This constituent college of the University of London has received a gift of £50 from the Clothworkers' Company. A legacy of £200 has also been received from the late Miss Florence Davenport Hill.

PRIMARY SCHOOL NOTES.

The New Scale for London Teachers.

THE new scale of salaries provisionally agreed upon for primary-school teachers employed by the London County Council marks a substantial advance upon existing rates of payment. Assuming that a man assistant teacher leaves the university or training college at the age of twenty-one years he will receive an initial salary of £200 per annum.

Subject to satisfactory service being given, annual increments of £12. 10s. would bring him in the fortieth year of age a maximum salary of £425. In the case of a woman assistant the commencing salary is £187. 10s., the annual increment £12. 10s., and the maximum £340 attained in the thirty-third year of age. The maxima for head masters ranging from £467. 10s. to £650 per annum; and those for head mistresses ranging from £374 to £520 per annum, respectively, also indicate corresponding improvements. The acceptability of the scheme to the teachers as a whole will probably depend upon the promptitude with which its benefits can be conferred. The teachers are in desperate financial straits, and necessity will compel them to give careful consideration to any proposals carrying the promise of immediate relief.

The Prospects of a Permanent Settlement.

WHATEVER may be advanced in favour of the adoption of the new scale as a temporary settlement, there will be general agreement among the teachers concerned that there is little or no prospect of its acceptance as a permanent scale. Since the official advance in the cost of living is 141 per cent. above the pre-war standard, it would appear that the new scale gives as salary to men assistants a pre-war equivalent of from £83 to £176 per annum, the range for women assistants being from £78 to £141 per annum. In one of the large industrial northern towns college-trained girl teachers received a minimum commencing salary of £80 per annum forty years ago. The new scale carries the fatal defect of all the Burnham proposals in making no provision for the rapid increase in the cost of living. It is a matter of common knowledge that the withdrawal of the bread subsidy, the increase in the price of coal, and additions to the wages of cotton and other productive workers, will bring substantial additions to the cost of living. The Rent Restriction Act will make further demands upon the resources of all classes of workers, so that the unwisdom of the Burnham Committee in attempting to set up salary scales for a period of three years becomes more apparent every week.

The Need of a Sliding Scale.

THROUGHOUT the country, salaries that were accepted by teachers three months ago are now found to be utterly inadequate. In many of the industrial areas the average family income of a working class household is £10 or more per week, and teachers who do not receive half this amount find it impossible to exist. In numerous cases teachers are

A. & C. BLACK'S NEW BOOKS.

JUST PUBLISHED OR ABOUT TO BE.

THE CLASS-ROOM REPUBLIC.

By ERNEST A. GRADDOCK, M.A.

Crown 8vo. Price 2s. 6d. net.

In this volume the author expounds the principles underlying the experiment of granting self-government to school-boys, and describes in detail the successful career, during the last two years, of a self-governing school-room community, established in a London school. In this miniature republic, where work is done with most satisfactory results on a competitive system, the master relinquishes his functions of disciplinarian and increases his importance as teacher and guide.

A SHORT SKETCH OF EUROPEAN HISTORY

By H. E. MARSHALL, Author of "Our Island Story."

Vol. I.—From the Fall of the Roman Empire to the Reformation.

Large crown 8vo, cloth, with maps. Price 5s.

This book is not intended to be a compendium of European History, but rather an introductory study recording in as dramatic a form as possible the events and influences which have had most effect on the general development of Europe.

THE MAKING OF EUROPE

A Geographic Treatment of the Historical Development of Europe.

By W. H. BARKER and W. REES. Large crown 8vo, cloth, illustrated with about 40 Sketch Maps. Price 5s.

This volume gives in a new form the essential features of European History, and is designed to meet the requirements of Continuation Classes and the higher forms of Secondary Schools.

THE EXPANSION OF THE ANGLO-SAXON NATIONS.

A Short History of the British Empire and the United States.

Edited by H. CLIVE BARNARD, M.A., B.Litt. With contributions by leading writers in each of the self-governing Colonies, in India, and in the United States.

Containing 22 maps, specially prepared. Large crown 8vo, cloth. Price 7s. 6d. net.

The book is designed primarily for the upper forms of Secondary Schools, especially in connexion with advanced courses in "modern studies," and for candidates for history scholarships. At the same time it should prove useful in Evening and Continuation Schools, in Training Colleges, and for private students.

MODERN TIMES (1815-1915).

This is a new set (the sixth) of Black's series of "History Pictures."

Edited by G. H. REED, M.A.

In special detachable portfolio, containing about 75 illustrations. Price 2s. 6d.

FIRST PRINCIPLES OF MUSIC. By J. F. READ, Mus.Doc. (Oxon.), formerly Professor of the Royal College of Music. The clearest and most concise treatise of the kind that has yet been written. 1s. 6d.

TECHNIQUE AND INTERPRETATION IN VIOLIN PLAYING. By Rowsby Woof, Professor at the Royal Academy of Music. 4s. 6d. net.

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.1.

purchasing the necessities of life on the credit of their monthly remittances, and every increase in the price of commodities intensifies their difficulties. The action of the teachers in accepting the Burnham proposals for a period of three years was taken without adequate knowledge of the upward trend of prices which was likely to occur, and, unless the position is eased by the prompt introduction of the sliding scale principle, whereby salaries may be automatically raised with the cost of living, there is grave danger that the discontent of teachers may be driven underground. In this connexion the increasing movement of teachers' associations towards affiliation with the Trade and Labour Councils is significant.

The Passing of the Man Teacher.

REPORTS from the large towns and industrial areas indicate no anxiety on the part of parents to send their boys into the teaching profession. Members of Trade Councils are learning with amazement of the paltry remuneration given to the teachers of their children, and there is no hope that working-class people will entertain any suggestion of allowing their sons to become teachers. Recent salary advances to teachers have in most cases failed to maintain the relative positions of their recipients upon the border line of poverty; owing to the higher cost of living these teachers have been definitely placed below the poverty standard. Some of the cases are heart-breaking: one young man, fully certificated and married, receives £200 per annum under the terms of a new salary scale; he has had twenty years of successful teaching experience; an ex-service man, who is in receipt of a pension for partial disablement, has a total income of £250 under the same scale. He is engaged to be married, but, owing to the expense of living in rooms and travelling, he can save nothing for his future home. Those who have families are quite unable to keep them respectably clad. Many of the older teachers are breaking down in health and have lost much of their faith in the future of education; the zeal which possessed them when the war was ended has largely given place to hopeless apathy. The position is profoundly disturbing and calls for remedial action upon generous lines.

National Union of Teachers.

THE following members have been appointed by the Executive to represent the N.U.T. upon the Standing Joint Committee on Secondary School Teachers' Salaries:—Mr. C. W. Crook, Mr. J. L. Paton, Mr. W. B. Steer, Sir James H. Yoxall, and Miss Wood.

Passy. — List of other publications and prices of back numbers of *Le Maître Phonétique* (from 1889) on application.

The special Sub-Committee which is inquiring into the relation of kinemas to the school curriculum, is considering the questions of experimental work and scientific research and the best methods of introducing the kinema into the educational system. The Thank-offering Fund of the Union, instituted for the augmentation of pensions which are insufficient for their purposes, now amounts approximately to £70,000.

The Position of Non-provided School Teachers.

DURING the last ten years the position of teachers in non-provided schools has become increasingly difficult by comparison with that of their colleagues in provided schools. Apart from the disability, frequently incurred, of working in dilapidated buildings inadequately staffed, the voluntary-school teacher is expected to superintend the Sunday school, train the church choir, and generally take an active interest in church activities; in many cases his day school appointment is strongly influenced by his willingness to undertake such duties. In the event of the religious instruction given in the day school not being satisfactory in the opinion of the managers, the non-provided-school teacher can be dismissed from office without any effective right of appeal. A tendency has developed among church teachers of independent view to take service in Council schools upon leaving college or university; and, with the progressive elimination of non-provided schools, this tendency has naturally been strengthened. The reaction of this movement has not been lost upon non-provided-school teachers, and, in view of the wider outlook which has been developed as the result of the war, there is reason to believe that these teachers will exert a significant influence in shaping any decision arrived at by members of the National Union of Teachers in connexion with the new religious controversy.

VISION AND COLOUR BLINDNESS.

- (1) *Card Test for Colour Blindness.* By Dr. F. W. EDRIAGE-GREEN. A series of 24 cards. (25s. net. Bell.) (2) *The Physiology of Vision, with Special Reference to Colour Blindness.* By Dr. F. W. EDRIAGE-GREEN. (12s. net. Bell.) Dr. Edridge-Green is well known as an authority on the fascinating but difficult subject of colour-vision. He is the inventor of

METHUEN & CO., LTD., 36 ESSEX STREET, LONDON, W.C.2.

several methods which have received official recognition for examining the colour sense. His colour-perception spectrometer, used chiefly for scientific purposes, is arranged so as to make it possible to expose to view in the eyepiece the portion of a spectrum between any two desired wave-lengths. The power of discriminating colour varies widely in different individuals. According to Dr. Edridge-Green, "a person of very acute colour vision can distinguish seven different colours (the so-called primary colours) in the solar spectrum—viz., red, orange, yellow, green, blue, indigo, violet; a person of normal colour vision can distinguish six (failing to discriminate between blue and indigo); and after this, in descending order of acuteness of colour-vision, there are those who can distinguish five, four, three, two colours; and, finally, the totally colour-blind, who distinguish no colours, and see the whole spectrum as a shaded grey band." He calls those who can distinguish seven colours heptachromic, and those of less acute perception, in descending order, hexa-, penta-, tetra-, tri-, and dichromic. Such a classification, of course, does not constitute a theory of colour-vision.

(1) Various tests are described in the volume under review for classifying individuals according to their power of colour discrimination. The colour-perception lantern, used for examining candidates for admission into the navy and railway services, is regarded as the best practical test when expense is no object. The test with coloured wools, now nearly obsolete, not only failed to detect more than 50 per cent. of the dangerously colour-blind, but also rejected many normal sighted. The card test, designed by Dr. Edridge-Green, furnishes a simple and inexpensive method, by means of which a teacher with normal sight may determine the existence of defective colour-vision in his pupils. Twenty-two cards are provided, and on each is a diagram made up of irregular spots. The shape, relative position, and number of the spots is the same on each card, but on a ground of separate spots of one colour a letter is formed in spots of another colour. The letter on the card can be recognized only by distinguishing the difference of colour, so that the examinee is forced to judge by colour perception alone. In this way it is possible to detect not only defective colour differentiation, but also shortening of the spectrum either at the red or the violet end.

(2) In "The Physiology of Vision" the author has collected the results of his investigations, extending over the past thirty years. The title is perhaps somewhat misleading, as suggesting a compre-

hensive textbook dealing with all the facts and theories relating to the subject; but the volume will be of great service as a record of interesting and suggestive experiments. Although some of these require elaborate apparatus, many of them may be repeated with inexpensive materials, or even with no apparatus at all—as in the case of the after-images seen in the morning. "If, on awaking, the eyes be directed towards a window and then immediately closed and covered with the hand, a positive after-image is seen of the window. If the window be subtended by a white cloud, the light parts of the window appear rose-coloured and the bars dark." Dr. Edridge-Green has his own theories with regard to vision, and these are still the subject of discussion by both physicists and physiologists. The practical importance of a true understanding of the subject need not be insisted upon, and the present volume will certainly help towards that end by pointing out errors and indicating where further research is required.

this work he announces his intention of publishing a further study, in two volumes, on his favourite author. His "Adolphe" is a monument of meticulous exactness and minute research. To this slight novel of less than a hundred pages he contributes eighty-six pages of introduction and thirty of notes. Most of the added matter comes under the head of pure erudition; the editor himself regrets in his preface that no space has been left for psychological or literary comment. But where it is a question of probing the relations on which the novel was based or of building hypotheses to explain what cannot be established otherwise, no detail is too small to escape Prof. Rudler's attention. For example, the name of the heroine, Ellénore. Where did Constant find this peculiar name? Was it suggested by the name of any of the several ladies he had loved and left: "Mme Lindsey se prénommaît, Anne Suzanne; Mme Trévor, Harriot; Mme Talma, Louise Julie; Mme de Charrière, Isabelle Agnès Elisabeth; Mlle de Cramm, Wilhelmine Luise Johanne; Mme de Staël, Georgina Charlotte Augusta." These names evidently do not provide the key to the mystery. Is the name of English or Scotch origin? The dictionaries afford no help, and Prof. Ker, who has been appealed to, can give little. After all, the question remains undecided, though Prof. Rudler "reserves several unsatisfactory hypotheses." No doubt we shall learn more of these in his future work on Constant. This small example will show with what minuteness the editor examines his subject. Further evidence will be found in the notes. Perhaps the most striking of all is in the nearly nine closely printed pages in which he studies the punctuation of the novel, collating for the purpose the original manuscript, the first edition of London and the first edition of Paris, showing where commas have been added or omitted, where words have been spelt with or without an accent, &c. It is a labour of the most relentless patience. One only wonders whether such detail might not have been omitted in favour of some discussion and elucidation of the human and literary sides of the work; for, after all, these things, too, have their value.

(2) A notable addition to the Manchester series of French texts is Dr. H. F. Stewart's edition of "Les Provinciales" of Pascal. It is no easy matter to explain a work of polemical controversy, and to elucidate for students the discussion of doctrines which have passed out of the domain of public interest. But Dr. Stewart

knows his subject thoroughly and all the authorities from Sainte-Beuve to Strowski, in passing by Boutroux, Havet, and the rest. He is, moreover, versed in the tenets of the Jesuits, and "has in readiness, Their nomenclature and philosophy"; he discusses tutiorism and probabilism with the knowledge and zest of Molina himself. He even succeeds in making such matters interesting—and, indeed, they are still *d'actualité*, more so, perhaps, than is usually imagined. In establishing his text, Dr. Stewart has not relied on the well-known edition of the "Grands Ecrivains de la France," but has collated the chief contemporary editions again. His notes are illuminating, and, considering how much there is to explain in "Les Provinciales," not over elaborate. We have not space here to comment fully on this excellent edition, which in its breadth and human interest, is a credit to English scholarship, and which we congratulate the Manchester Press on adding to their collection.

(3) Another university professor, Mr. Ritchie, of Birmingham, contributes, with Mr. Moore, a French Reader for the middle forms of schools, which has the advantage of containing many of the stock pieces which all should know: "Le Chêne et le Roseau, Les Souvenirs du Peuple, Le Premier Sourire du Printemps, L' Etoile du Soir, La Chèvre de M. Séguin," &c. It will be all the more useful on that account.

(4) Mr. A. Hamilton Thompson has drawn from the "Mémoires d'Outre-Tombe" an interesting volume on Chateaubriand's life in London during the Revolution, which might serve as a reading book for the higher forms of schools, and also be useful for the study of Anglo-French relations in universities.

(5) We must congratulate Messrs. Blackie on their "French Plain Texts." Each little volume of about forty pages contains a tale or play, or an extract complete in itself, from some well known author, without notes or vocabulary. They are excellent, and, at the present day, there is no such value to be had elsewhere at the price—fourpence.

6) Messrs. Dent add two handsome little volumes to their Collection Gallia—the well-known "Canne de M. de Balzac," by M. Girardin, and a charming, if somewhat old-fashioned, tale by Scribe, "Maurice."

(7) On the well known "Tableaux Auxiliaires Delmas," M. Roch-

elle has founded four volumes for the study of French. They will be useful to teachers who use the Direct Method, as offering excellent material and suggestions for lessons, but they will hardly serve as textbooks for English pupils.

(8) Another book that will be helpful to teachers is Mr. Grace's "Primer of French Pronunciation." It is clear and in general correct, though there are slips—e.g. *aqueduc* (not *aquedux*) is pronounced "ak'duk"; *persuader*, in prose, has three syllables; *guano* has two; *rôti* has an open, not a closed, o. The worst defect in the book is to have rejected the phonetic symbols in favour of an old-fashioned representation of sounds by curious combinations of the ordinary letters. This can only lead to confusion—e.g. "gou-a-no" does not plainly represent the sound of French *guano*, nor does "tee-oo-lip" that of English "tulip," "ka-out-shou" is a dangerous representation of *caoutchouc*, &c.

LONDON HOSPITAL MEDICAL COLLEGE AND DENTAL SCHOOL.

THE MEDICAL COLLEGE of the LONDON HOSPITAL is fully equipped to meet modern requirements. The various departments are under the direct control of University Professors and Lecturers, who devote their time entirely to work in their Department and who are assisted by a number of Demonstrators. The HOSPITAL contains 933 beds and is the largest General Hospital in England. Its position in the neighbourhood of the extensive docks, factories, and workshops of the East of London renders it for accidents one of the largest Hospitals in the world. The Wards, Out-patient and Special Departments present a wide field for clinical instruction and afford exceptional opportunities for acquiring an extensive and practical knowledge of all phases of disease.

SCHOLARSHIPS AND PRIZES. Entrance Scholarships are offered in Science. An Entrance Scholarship is also offered in Anatomy and Physiology to students of the Universities of Oxford and Cambridge. Numerous Prizes are awarded in all subjects of the curricula.

FEES. An Entrance Fee of 20 Guineas and an Annual Fee of 40 Guineas, which includes all classes and lectures.

RESIDENT APPOINTMENTS are more numerous than at any other Hospital in the Kingdom.

RESEARCH FUNDS of over £26,000 give unrivalled facilities for Medical Research.

ATHLETICS, RESIDENCE, &c. A Clubs' Union with an Athletic Ground of thirteen acres, Students' Hostel on Hospital Grounds, College Dining Hall, &c.

A Prospectus giving full particulars may be obtained from the Dean:

Prizes

We have a very fine selection of books bound in leather and fancy bindings

* * * *

Which is offered without advance while the stock lasts.

* * * *

When the stock is exhausted prices must be increased considerably.

* * * *

Prices are still soaring.

* * * *

Paper is now six times; leather and binding three to four times pre-war.

* * * *

Why not order early to ensure a good selection of books at present prices?

* * * *

There is nothing so valuable as a book prize.

* * * *

A Transition Catalogue of Prize Books bound in leather and fancy bindings free to Heads on request.

The Educational Supply Assocⁿ Ltd

40-44 HOLBORN VIADUCT, LONDON, E.C.1.

BELL'S NEW TEXTBOOKS.

ELEMENTARY ALGEBRA, Part I.

By CLEMENT V. DURELL, M.A., Senior Mathematics Master, Winchester College; and G. W. PALMER, M.A., late Master of the Royal Mathematical School, Christ's Hospital. With Introduction and Full Answers. 4s. 6d. Without Introduction and with Answers only where intermediate work is required. 3s. 6d. Answers separately. 1s.

[*Cambridge Mathematical Series.*

The authors have assumed that discussions in the text are rarely of value to the ordinary boy, and cannot replace oral instructions. In the text will therefore be found only a few simple cautions, some definite rules, and a number of illustrative examples. The first part covers the usual course up to and including quadratic equations. The book has been revised by a teacher who has had wide experience of the needs of students at Technical Colleges and Evening Schools.

Times Educational Supplement.—"Full of interest and should stimulate the application of elementary mathematics to ordinary affairs."

A CONCISE GEOMETRY.

By CLEMENT V. DURELL, M.A., Senior Mathematics Master, Winchester College. Crown 8vo. 4s. 6d.

In this new book the number of propositions is limited to the smallest amount consistent with the requirements of the average examination. The work is therefore compact in treatment. The propositions are printed consecutively, but the proof of the theorems has been reduced to a minimum. There are a large number of rider examples and constructive exercises grouped according to the blocks of propositions.

BUSINESS ARITHMETIC. FIRST YEAR COURSE.

By C. PENDLEBURY, M.A., F.R.A.S.; and W. S. BEARD. Crown 8vo. With or without Answers. 3s. 6d.

This book contains all that is necessary for a first year's course for students in Day Continuation Schools, and also for pupils in Secondary Schools who may be preparing for a business career.

A FIRST COURSE IN THE CALCULUS.

By W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, formerly Mathematics Master at Clifton Coll., Bristol; and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. Part II. 5s. Also, now ready, Part I, Second Edition. 4s. Or, complete with Answers, 8s. 6d.

[*Bell's Mathematical Series.*

General Editor: W. P. MILNE, M.A., D.Sc.,

Professor of Mathematics, Leeds University.

The first part of this First Course is devoted to the Differential Calculus with application to Ratio, Maxima and Minima, and Geometry. The second half deals with the processes of Integration in their application to Areas, Volumes, Centres of Gravity, Moments of Inertia, and Centres of Pressure.

ARITHMETIC, Part II.

By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Crown 8vo. 3s. 6d. Part I now in its Third Edition. 3s. 6d.

[*Bell's Mathematical Series.*

This book covers the ground required for the new combined syllabus of the School Certificate and Army Examinations, and deals in some detail with Mensuration. Logarithms are fully treated, and there is a large selection of Revision Papers dealing with the various subjects in turn.

Write for full list of series.

INTERMEDIATE CHEMISTRY.

By ALEXANDER SMITH, B.Sc., Ph.D., F.R.S.E., Professor of Chemistry and Head of the Dept., Columbia University. Post 8vo. Illustrated. 8s. 6d. net.

This new textbook of Chemistry is longer than the Elementary volume, and shorter than the General Chemistry by the same author. It includes a brief outline of Agricultural Chemistry, and also contains a discussion of foods and their heating values, an explanation of the methods for softening water, and other practical applications of chemistry.

NEW READERS.

IMPERIAL READERS.

By EVA HARRIS. Illustrated in colour and black and white. Infant Primer. 9d. Infant Reader No. 1. 1s. Infant Reader No. 2. 1s. 3d.

CONTINUOUS READERS.

Last of the Barons. By Lord LYTON.

Fortunes of Nigel. By Sir WALTER SCOTT.

Each volume bound in limp cloth, and with numerous illustrations. Price 1s. 6d.

A full list of the other 40 titles in this series will be sent on request.

Messrs. Bell will be happy to send their complete educational catalogue, post free, upon application.

LE FRANÇAIS. A PRACTICAL FRENCH COURSE.

By MARC CEPPI and LL. J. JONES, B.A., both of Whitgift School, Croydon. Part I, now ready, 2s. 6d.; Part II, in the Press.

This new Course is founded on the recommendations contained in the Board of Education Memoranda on the Teaching and Organization in Secondary Schools (Modern Languages), 1912, the Board of Education Report of an Enquiry into the Teaching of French in London Secondary Schools, 1918, and the Report of the Government Committee appointed to inquire into the Position of Modern Languages, 1918. The Grammatical Terminology is, as far as possible, that suggested by the Joint Committee.

MODERN EUROPEAN HISTORY.

By CHARLES DOWNER HAZEN, Professor of History, Columbia University. Large crown 8vo. With 154 illustrations, 26 Maps in colour, and 9 in black and white. 7s. 6d. net.

To all thoughtful persons the European War has brought home with overwhelming power the importance of a knowledge of Modern European History. For without such knowledge no one can understand, or begin to understand, the significance of the forces that have made it, the vastness of the issues involved, the nature of what is indisputably one of the gravest crises, if not the very gravest, in the history of mankind.

HISTORICAL ATLAS FOR SCHOOLS (1789-1914).

Compiled and drawn by B. V. DARBISHIRE, M.A., Trinity College, Oxford. 32 pp., with 108 Maps and Diagrams, and Letterpress. 2s.

This little atlas is designed for use in teaching the history of the world (outside the British Isles) from the French Revolution down to the outbreak of the Great War. The utmost simplicity has been aimed at, not only with a view to cheapness, but also to ensure the clearness so necessary in a school atlas.

LADDER IN HISTORY.

By GEORGE GUEST, J.P., B.A., Head Master of St. Paul's School, Bournemouth. In 6 vols. 8vo. With numerous illustrations.

This series aims at presenting an Elementary Course in British History suitable for all classes of Primary Schools and for the lower and middle forms of Secondary Schools.

Book I. Heroes of the Homeland. 1s. 8d. [Ready.] Suitable for Standards I and II.

Book II. Great Leaders in History. 2s. [Ready.] Suitable for Standard III.

Book III. Changes in Social Life. 2s. 4d. [In the press.] Suitable for Standard IV.

Book IV. An Imperial History of England. New and Revised Edition. 2s. 6d. Suitable for Standard V.

Book V. A Social History of England. Fourth Edition. 2s. 6d. Suitable for Standard VI.

Book VI. A Constitutional History of England. Revised Edition. 2s. 6d. Suitable for Standards VI and VII.

New editions of Books IV, V, and VI, bringing them up to the inclusion of the Treaty of Versailles, 1919, are now in active preparation.

PRESENT-DAY PRÉCIS.

By A. W. READY, B.A. An entirely New Edition, rewritten to fit present requirements. Crown 8vo. 2s. 6d.

Contains instructions and specimens for Candidates preparing for the Army, London Matriculation, Cambridge "Previous," Schools "Leaving" Certificate, &c.

THE JOY OF EDUCATION.

By WILLIAM PLATT. With Introduction by JOHN ADAMS, M.A., B.Sc., Professor of Education, University of London. 2s. 6d. net.

Prof. John Adams says: "To many people Mr. Platt's title will appear almost a contradiction in terms, yet few books live so well up to their titles."

SCHOOLS OF TO-MORROW IN ENGLAND.

By JOSEPHINE RANSOM, Author of "Our Philosophy of Education." Demy 16mo. Paper boards. 1s. 6d. net.

The Journal of Education.—"We commend these sketches to the attention of our readers."

G. BELL AND SONS, Ltd., York House, Portugal St., W.C. 2.

STANDARD TEXTBOOKS.

MATHEMATICS

Issued complete with or without answers; in separate parts, or Examples separately. Please write for details and prices.

Pendlebury's Arithmetic. With 8,000 Examples. By C. PENDLEBURY, M.A., formerly of St. Paul's School. 28th Edition. 5s. 6d.

Pendlebury and Robinson's New School Arithmetic. 16th Edition. 5s. 6d.

Pendlebury and Beard's Commercial Arithmetic. 14th Edition. 3s. 6d.

Pendlebury and Beard's "Shilling" Arithmetic. 568th Thousand. 1s. 9d., or with answers, 2s. 3d.

Pendlebury and Robinson's New "Shilling" Arithmetic. 13th Edition. 1s. 9d., or with answers, 2s. 3d.

Pendlebury and Robinson's Junior Arithmetic. 12th Edition. With or without answers, 2s. 6d.

Pendlebury's Preparatory Arithmetic. 4th Edition. With Revision Papers, 2s. 6d.

Baker and Bourne's Public School Arithmetic. By W. M. BAKER, M.A., and A. A. BOURNE, M.A., of Cheltenham College. 5th Edition. 5s. 6d.

Baker and Bourne's Student's Arithmetic. 8th Edition. 3s. 6d.

Baker and Bourne's "Shilling" Arithmetic. 5th Edition. 1s. 9d., or with answers, 2s. 3d.

Arithmetic for Preparatory Schools. By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell. Crown 8vo, 4s., or with answers, 4s. 6d. Also issued in two parts, bound in limp cloth. Part I, 2s. 6d. Part II, 2s. [Bell's Mathematical Series.]

Arithmetic. By H. FREEMAN, M.A., formerly Mathematics Master at the Haberdashers' Aske's School. 7th Edition. 3s. 6d. [Bell's Mathematical Series.]

Arithmetic. By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Part I, 2nd Edition, 3s. 6d. Part II, 3s. 6d. [Bell's Mathematical Series.]

Commercial Arithmetic and Accounts. By A. RISDON PALMER, B.A., B.Sc., and J. STEPHENSON, M.A., M.Com., B.Sc. (Econ.), both of the Regent Street Polytechnic. 6s. net. [Bell's Mathematical Series.]

A "Shilling" Arithmetic. By J. W. ROBERTSON, M.A., B.Sc., Senior Mathematics Master at Central School, Aberdeen. 6th Edition. 1s. 9d. net; with answers, 2s. 3d. net. [Bell's Mathematical Series.]

Baker and Bourne's Elementary Algebra. 17th Edition. 5s. 6d.

Baker and Bourne's Shorter Algebra. 5th Edition. 3s. 6d.

Baker and Bourne's First Algebra. 9th Edition. 2s. 6d.

Baker and Bourne's Elementary Geometry. 12th Edition. Revised. 5s. 6d.

Baker and Bourne's New Geometry. 4th Edition. 3s. 6d.

Baker and Bourne's First Geometry. 5th Edition. 2s.

Borchardt and Perrott's Geometry for Schools. By W. G. BORCHARDT, M.A., and Rev. A. D. PERROTT, M.A., of Cheltenham College. 5s. 6d.

Analytical Geometry of the Straight Line and Circle. By JOHN MILNE, M.A., Senior Mathematics Master of the Mackie Academy, Stonehaven. Crown 8vo. 5s. [Bell's Mathematical Series.]

Borchardt and Perrott's New Trigonometry for Schools. 12th Edition. 5s. 6d.

Borchardt and Perrott's Junior Trigonometry. 4s. 6d.

Borchardt and Perrott's First Numerical Trigonometry. 3s. 6d.

Pendlebury's Elementary Trigonometry. 7th Edition. 5s.

MATHEMATICS continued—

Plane Trigonometry. By H. L. REED, M.A., Assistant Mathematics and Science Master, Westminster School. 2nd Edition. 4s. 6d. [Bell's Mathematical Series.]
"The best school book on the market."—*A.M.A.*

Statics. By R. C. FAWDRY, M.A., B.Sc., Head of the Military and Engineering Side, Clifton College. 5s., or in two parts. Part I, 3rd Edition. 3s. Part II, 3rd Edition. 2s. 6d. [Bell's Mathematical Series.]

"This book can be confidently recommended."—*Nature*.

Dynamics. By R. C. FAWDRY, M.A., B.Sc. 5s. Or Part I, 3rd Edition. 3s. Part II. 2s. 6d. [Bell's Mathematical Series.]
"A valuable feature is the building up of the subject along historical lines."—*The Times*.

The First Parts of these two books have been issued bound together, in response to requests received from many teachers. Price 5s.

Differential Calculus for Colleges and Secondary Schools. By CHARLES DAVISON, Sc.D., formerly Senior Mathematics Master at King Edward's School, Birmingham. Crown 8vo, with Revision Exercises, Essays, and Problem Papers. 6s.

Mathematical Problem Papers for Secondary Schools. By C. DAVISON, M.A., Sc.D. 2nd Edition. Crown 8vo. 3s. 6d.

SCIENCE

Textbooks by Prof. Smith.

Introduction to Inorganic Chemistry. By ALEX. SMITH, B.Sc., Ph.D., F.R.S.E., Prof. of Chemistry and Head of the Department, Columbia University. 35th Thousand. 12s. 6d. net.

Experimental Inorganic Chemistry. A Laboratory Outline for use with the above. 6th Edition, revised. 5s. net.

General Chemistry for Schools. 45th Thousand. New Edition, revised and enlarged. 10s. 6d. net.

LATIN

SIMPLIFIED LATIN CLASSICS. Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. With numerous Illustrations, Translation Exercises, and a full Vocabulary. Fcap. 8vo. 1s. 6d. each.

Caesar's Invasions of Britain.

Vergil's Athletic Sports.

Livy's Seven Kings of Rome.

Vergil's Taking of Troy.

Simple Selections from Cicero's Letters.

Tacitus' Agricola.

Caesar's Fifth Campaign (from De Bello Gallico, Book V).

Sallust's Catiline.

Caesar's Belgian Campaign.

ONE-TERM SERIES OF LATIN CLASSICS. A new series designed for use with Fourth or Fifth Forms where comparatively little time is able to be given to the study of Latin.

Cicero's Pro Milone. Edited by C. E. LAURENCE, M.A., Assistant Master at Haileybury College. 1s. 3d.

Livy's Veil and the Etruscan Confederacy. Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. 1s. 3d.

Bell's Illustrated Classics. Edited by E. C. MARCHANT, M.A., formerly Classical Master at St. Paul's School. 60 volumes, each fully illustrated, with Notes and full Latin-English Vocabulary. Price 1s. 9d.

Bell's Latin Course for the First Year. By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. In Three Parts. Crown 8vo. With Coloured Plates and numerous other Illustrations. 1s. 9d. each.

Bell's Concise Latin Course, Part I. By E. C. MARCHANT, M.A., and J. G. SPENCER, B.A. Seventh Edition, revised, with the long accents marked throughout the Latin Exercises. Crown 8vo. 2s. 6d.

Bell's Concise Latin Course, Part II. By E. C. MARCHANT, M.A., and S. E. WINBOLT, M.A. Fourth Edition. Crown 8vo. 3s.

The Shorter Aeneid. By H. H. HARDY, M.A., Head Master of Cheltenham College, with Introduction by Prof. H. E. BUTLER, University of London. Second Edition. Crown 8vo. 3s. 6d.

A FIRST YEAR READER.

Fabulae Antiquae. By A. M. CROFT, B.A., Leeds Girls' Modern School. Crown 8vo. Illustrated, with or without Full Vocabulary. Second Edition. 1s. 6d.

De Ducibus. Selections from Cornelius Nepos. By W. G. BUTLER, M.A., Christ's Hospital. With numerous Illustrations and brief Grammatical Notes. Fcap. 8vo. 2nd Edition. 1s. 9d. Uniform with Bell's Simplified Latin Classics.

"Boys ought to learn a good deal from this little book."—*Times Educational Supplement*.

Dialogues of Roman Life. By S. E. WINBOLT, M.A., Christ's Hospital. Post 8vo. Illustrated. 2s. 6d.

A series of dialogues, both original and adapted, which are written in accordance with the general aims of the Summer School for the Reform of Latin Teaching.

Books of the Emperors. A New Series of Illustrated Latin Readers. Edited, with Notes and Vocabulary, by E. C. MARCHANT, M.A., Fellow of Lincoln College, Oxford. Illustrated. No. I. 2nd Edition. 1s. 6d. No. II in preparation.

Based upon Suetonius' Lives of the Emperors, and contains the Lives of Julius Caesar, Augustus, Caracalla, Boadicea, Vespasian, and Titus Agricola. For second year pupils.

Bell's Latin Picture Cards. Edited by Professor FRANK GRANGER. A set of 16 cards, printed in colours, with vocabularies and exercises on the back of each card. Price 2s. net.

Cards I-VIII illustrate subjects found in the prose writers, Caesar, Livy, Cicero, &c.

Cards IX-XVI those of the poets, Virgil, Horace, Ovid, &c.

Packets of 16 cards, confined to either series of subjects, or 16 of any one card, will be supplied if desired.

CHAMBERS'S LIST

339 High St.,
Edinburgh.

MACHINE DRAWING AND SKETCHING

By JOHN H. DALE, A.M.I.M.E. Quad, Hons.,
Bronze Medallist, Winner of King's Prize in
Machine Drawing, Lecturer in Engineering at
the Darlington Technical College.

3s. 6d. net.

The book is intended for the use of students of about the fourth and fifth years of a Technical Course. It contains 84 machine drawing examples, most of which are presented in the pictorial. Each example is complete in itself and, with the necessary homework, is estimated to occupy one class-night. There are also 200 sketches of machine details and 190 questions on sketching, numerical calculations, and workshop practice.

STUDENT'S HISTORY OF ENGLAND & GREAT BRITAIN

By W. J. BEES, B.Sc.

772 pages, 6s. net.

PART I—55 B.C. to 1485 A.D.; II—1485 to 1910. Each 3s. net. SECTION I, 1066 to 1485; 2, 1485 to 1714; 3, 1688 to 1910. Each 2s. net.

The Teacher says—"An ideal text-book. This is decidedly one of the very best of students' English histories that we have seen, and we very heartily commend it to the notice of teachers and students in secondary schools, and indeed in all institutions where English history is taught."

CHAMBERS'S PERIODIC HISTORIES

In this series due prominence is given to the development of social life; the progress in arts and crafts; the advancement of learning; the great struggles for religious and political liberty; the growth of the constitution.

Horace Marshall & Son.

Outlines of European History, 1789-1914.

By C. L. THOMSON, F.R.Hist.S., and M. B. CURRAN, Assistant Secretary to the Royal Historical Society, and Secretary to the Historical Association.

This history, the work of two teachers of long experience, is adapted for the use of pupils in the upper and middle forms of Secondary Schools. It treats first of the European wars from 1789-1815, then of the history of the various countries separately from 1815-70, and lastly of the developments which brought about the European War of 1914. PRIZE COMPETITIONS.

THE prize for the May competition is awarded to "B.P.," and the second place to "Jolande."

The winners of the April competition are Miss M. Robinson, 51 Newport Road, Stafford, and Miss Edith H. Herbert, 10 Burns Avenue, Nottingham.

Extract from Victor Hugo's "Pyrénées."

By "B.P."

Sandstone is the most interesting, the most curiously formed rock in existence. It plays that part among rocks which is played by the elm among trees. There is no appearance that it cannot put on, no eccentricity that it does not possess, no flight of the imagination that it cannot express. It assumes all shapes, appears in every guise. It seems animated by a multiform soul, if this word may be allowed in such a connexion.

In the drama of the countryside, sandstone takes the fantastic part. It is sometimes dignified and severe, sometimes merely a buffoon; now straining forward like a wrestler, now rolling itself into knots like a clown, now taking the shape of a sponge, or a pudding, a tent, a hut, or the stump of a tree. Sometimes it appears in the grass on the surface of a field, in little scaly mounds of tawny coloured stone, and pretends to be a sleeping flock of sheep. It can look like a grinning face, or staring eyes, or jaws that bite and chew the fern; it grasps the bushes with a hand like that of a giant scrambling clumsily from the earth.

Flat country dotted with elm-trees is never monotonous, a sandstone mountain is always interesting and surprising. Every time dead nature puts on human form she fills us with a strange emotion.

At dusk, on the high roads outside Paris, have you ever noticed the monstrous uncanny faces of the elms that, as the carriage moves apace, appear and disappear before your eyes?

Some yawn, others twist themselves towards the sky with open, screaming mouths. Some laugh with the savage, hideous mirth of hell! the wind shakes them, and they strain backwards with the writhings of the tortured, or lean towards one another, each whispering in the other's huge, leafy ear tales of which you catch

in passing I know not what queer syllables. Some have enormous eyebrows, absurd noses, wild hair and immense wigs, yet this takes nothing from the terror and the solemnity of their fantastic reality—they are caricatures, but they are bogies; some are grotesque, but all are frightening.

To the imaginative they seem to gather along the roadsides in ugly, threatening lines, and to lean over his path—the unknown, yet possible hobgoblins of the night.

There was not much to choose between the papers of the first eight. "Sure of Success" might have justified his pseudonym if he had not written an ungrammatical sentence: "They whisper into vast and leafy ears, of which in passing you catch syllables." There were no real difficulties in the passage, but some mistakes were very common. *Figure* is not "shape," but "face"; *brous-sailles*, "brushwood," "bushes," or "undergrowth," but not "brambles," which is a word of ill-defined meaning, but always implies something thorny or prickly. To *amusante* the nearest equivalent perhaps is "entertaining"; *amuser* is more than "amuse" and less than "interest." *Faune* is one of Hugo's favourite words, and a chapter might be written on the many uses to which he puts it; but here it seems to refer to nothing but colour. The passage is a good illustration of the poet's peculiar and fantastic imagination—one of the elements of his mind which seems more Teutonic than French. Much more about the images that sandstone suggested to him is to be found in the same volume. For the elm he had a peculiar affection; in "Le Rhin" he says: "Chaque orme vaut la peine d'être regardé à part. Tous les autres arbres sont bêtes et se ressemblent; les ormes seuls ont de la fantaisie et se moquent de leur voisin. . . ."

"Virgilius" sent us a translation which we cannot put into a class—a free rendering in light verse. It is very pleasant verse, but we must warn "Virgilius" that Victor Hugo is much too serious a person to be dealt with in this fashion.

We classify the 96 versions received as follows:—

Class I.—(a) B.P., Jolande, Bésigue, F.W.M., Sure of Success, Florah, Borealis, Noémi.

(Continued on page 400.)

NATURE'S OWN FOOD.

PURE HONEY.

Shortage of Sugar makes Catering a difficult problem. Solve it by using PURE HONEY—NATURE'S SUGAR.—A perfect sweetener for Tea, Puddings, and Cakes of all descriptions.—Delicious with Porridge.—Sweetens and Feeds.

A 60 lb. tin of Pure Honey will be sent Carriage Paid to any School in the United Kingdom. Price 9d. per lb.

I can also supply Pure Light Amber Cane Syrup in $\frac{1}{2}$ cwt. cases at 9d. per lb. Carriage Paid. All packages free.

Terms, cash with order, or on receipt of goods. Write—

The **BOARD OF EDUCATION** emphasizes the usefulness of local history thus:—"It is essential that in each school attention should be paid to the history of the town and district in which it is situated. All great and important events which have taken place in the neighbourhood will naturally be chosen for more detailed treatment. Several changes, such as the foundation and dissolution of the monasteries, should be illustrated by reference to the effect upon the particular district. . . . There must, in all cases, be included a study of those actually existent historical remains such as castles, city walls, monasteries, which are accessible from the school, and in connexion with this the study of the earlier periods must include some knowledge of the elements of architecture."

Two History Readers which fulfil the above conditions.

The County of the White Rose.

An Introduction to the History and Antiquities of Yorkshire.

By **A. C. PRICE, M.A.**, formerly Scholar of Pembroke College, Oxford;
Author of "Leeds and its Neighbourhood," &c.

415 pages. Crown 8vo. With upwards of 70 Illustrations and a folding map of the three Ridings. Strongly bound in cloth boards. **2s. 6d.** net.

Education says:—"Much History has been made in Yorkshire, and here we get just enough about it to make us want to know more. There are chapters on the Land and its Inhabitants, from the earliest historical times down to modern Yorkshire—castles, abbeys, churches, towns, each in turn are described and illustrated. There are 383 pictures, plans, and maps. The whole book is a treasury of information and most delightful reading."

The Story of the East Riding of Yorkshire.

By **HORACE B. BROWNE, M.A.**

368 pages. Crown 8vo. With 170 Illustrations. Bound in Art Cloth Boards.
Price **2s. 6d.** net.

The School World says:—"Mr. Browne gives scarcely more than a reference to what will be found in the ordinary textbooks, and so saves space for more local details. The story is well told, geology, pre-history, architecture, all coming in for treatment, as well as the more obvious facts of social and political life."

Class IV.—Vonnnette, Pauvre pressée, Veronica, Dird, Rattle, Trethowel, Percussus resurgam, Forres.

A Prize of Two Guineas is offered for the best translation of the following extracts from Montesquieu's "Esprit des Lois":—

Une maladie nouvelle s'est répandue en Europe; elle a saisi nos princes, et leur fait entretenir un nombre désordonné de troupes. Elle a ses redoublements, et elle devient nécessairement contagieuse: car, sitôt qu'un Etat augmente ce qu'il appelle ses troupes, les autres soudain augmentent les leurs, de façon qu'on ne gagne rien par là que la ruine commune. Chaque monarque tient sur pied toutes les armées qu'il pourrait avoir si ses peuples étaient en danger d'être exterminés; et on nomme paix cet état d'effort de tous contre tous. Aussi l'Europe est-elle si ruinée, que les particuliers qui seraient dans la situation où sont les trois puissances de cette partie du monde les plus opulentes, n'auraient pas de quoi vivre.

Chez les peuples chinois, on vit les gens de village observer entre eux des cérémonies comme les gens d'une condition relevée: moyen très-propre à inspirer la douceur, à maintenir parmi le peuple la paix et le bon ordre, et à ôter tous les vices qui viennent

d'un esprit dur. En effet, s'affranchir des règles de la civilité, n'est-ce pas chercher le moyen de mettre ses défauts plus à l'aise?

La civilité vaut mieux, à cet égard, que la politesse. La politesse flatte les vices des autres, et la civilité nous empêche de mettre les nôtres au jour: c'est une barrière que les hommes mettent entre eux pour s'empêcher de corrompre.

* * *

La vanité est un aussi bon ressort pour un gouvernement que l'orgueil en est un dangereux. Il n'y a pour cela qu'à se représenter, d'un côté, les biens sans nombre qui résultent de la vanité: de là le luxe, l'industrie, les arts, les modes, la politesse, le goût; et, d'un autre côté, les maux infinis qui naissent de l'orgueil de certaines nations: la paresse, la pauvreté, l'abandon de tout, la destruction des nations que le hasard a fait tomber entre leurs mains, et de la leur même. La paresse est l'effet de l'orgueil; le travail est une suite de la vanité: l'orgueil d'un Espagnol le portera à ne pas travailler; la vanité d'un Français le portera à savoir travailler mieux que les autres.

* * *

La société des femmes gâte les mœurs, et forme le goût: l'envie de plaire plus que les autres établit les parures; et l'envie de plaire plus que soi-même établit les modes. Les modes sont un objet important: à force de se rendre l'esprit frivole, on augmente sans cesse les branches de son commerce.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on June 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

VACANCIES in SCHOOLS

IMPORTANT

So many Schools at present being full, some with long waiting lists, it will be an assistance to us, in dealing with the large number of inquiries daily received, if Principals likely to have vacancies for the next two terms will notify us as early as possible.

To ASSISTANT MASTERS ASSISTANT MISTRESSES LADY MATRONS

¶ Candidates seeking appointments in Public or Private Secondary or Preparatory Schools at home or abroad should apply to

Truman & Knightley —SCHOLASTIC AGENTS—LTD—

who already have a large number of SEPTEMBER vacancies on their books.

¶ There is a great demand for both Assistant Masters and Assistant Mistresses, and serious efforts are being made to render the prospects in the teaching profession more attractive and equal to those in other professions.

¶ In addition to the large number of appointments open to University men and women in Public Schools where the remuneration is being fixed on improved scales, there are many vacancies in Preparatory Schools where young University men without previous experience can command commencing salaries ranging from £120 to £200 a year or more, according to their degrees, in addition to board and residence in term time.

¶ There are many openings for University women, and also for those with Higher Local or other good certificates interested in children and in teaching, in high class private schools for girls, where the conditions are pleasant, the hours not excessive, and salaries range from £80 to £200 or more, with board and residence, according to age, qualifications, and experience.

¶ There are also vacancies for House Mistresses, Lady Housekeepers, and Matrons in schools at salaries ranging from £60 to £100 or more per annum, with board and residence.

¶ THERE IS NO CHARGE FOR REGISTRATION. The requirements of each applicant receive careful consideration and attention, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

Supplement to
THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 611.

JUNE 1, 1920.

University Correspondence College.

UNIVERSITY Correspondence College, founded in 1887, with the object of preparing students by correspondence for the external examinations of London University was the first Institution of its kind. Its leading feature was, and is, a regular staff of tutors devoting the whole of their time to its interest.

From the date of its foundation, University Correspondence College never looked back, and its activities spread widely year by year. During the last fifteen years over twelve thousand U.C.C. students passed the various examinations of London University, and it is no exaggeration to say that the great development of London University during the last thirty years is in a large measure due to the propaganda work of University Correspondence College. The number of University Correspondence College Students who matriculated at London University during the twenty-seven years down to the outbreak of War in 1914, was 8,649.

The success of the College has been due to the thoroughness and efficiency of its methods, for which it has to thank the organizing ability of the Principal, William Briggs, LL.D., D.C.L., M.A., B.Sc., F.C.S., F.R.A.S., and the scholarship of the brilliant staff which from the beginning he has maintained around him. This staff has always been remarkable for the high academic qualifications of its members, who with rare exceptions have been Graduates with First Class Honours. Many former tutors of the College, often drawn from the

ranks of its past students, have attained to eminence in the educational world: they are to be found on the professorial staffs of Universities and University Colleges at home and abroad; they have acted as University examiners, above a dozen having served in that capacity at London University itself.

Students of University Correspondence College have many advantages over others. They are able to obtain, at a moderate cost, instruction from tutors who have obtained the highest honours themselves, are specialists in their subjects, and—what is very important—engage in no other work. Lessons are regular and frequent, forming an effective stimulus to steady work. The system is so elastic that arrangements are easily made to enable students to adapt freely the time at their disposal to the work they have to do. Finally, the payment of fees may be adjusted to meet the convenience of the student's pocket.

Students are not only prepared for Matriculation and the further Examinations—B.A., B.Sc., B.D., LL.B.—of London University, but also for the degrees and diplomas of the chief Examining bodies.

Those who wish to work without any Examination in view have a choice of over seventy self-education Courses.

A full Prospectus of the College may be obtained post free on application to the Secretary, No. 14 Burlington House, Cambridge.

MACMILLAN & CO.'S NEW BOOKS.

Rudyard Kipling's New Book.

FROM
MR. HERBERT RUSSELL'S
LIST OF BOOKS.

RECENT PUBLICATIONS.

A New Geography of Scotland. For Secondary and Higher Grade Schools. By MARION I. NEWBIGIN, D.Sc. (London), F.R.G.S., Editor of "The Scottish Geographical Magazine." With 23 Maps and Diagrams. Crown 8vo, cloth. Price **3s. 6d. net.**

The book is intended for pupils nearing the end of their school course, and its object is both to give a general summary of the geography of the country and to afford an insight into modern methods and results. Thus such subjects as the causes of the localization of industries, and of the growth or decay of towns; the relation of railway routes to land forms; the reasons for the peculiar distribution of population, and so on, are discussed in some detail.

The "Leading" Mapping Book. (Patent No. 16039/15). By W. LUCAS, B.Sc., Southchurch Hall School, Southend-on-Sea. Size 9 inches by 8½ inches. 16 pp., plus 8 sheets of tracing paper. Price **6d. net.**

The book provides in an ingenious way for the rapid production of outlines, and their retention under one cover. These can be filled up under the teachers' direction, and any two maps can be compared at will, intervening blank space being available for students' notes. The finished book will constitute an excellent record of the class teaching, and being the scholars' own work will be valued accordingly.

☛ The Publishers will be pleased to lend a **SCHOLAR'S WORKED COPY** for examination on application.

A Modern Civil Service and Commercial Manual of Spelling. Especially arranged for Commercial and Civil Service Examinations and Class Work in all Schools. In Five Parts. By HORACE J. BOWER, F.R.S.G.S. Crown 8vo. Price **1s. 9d. net.**

Contents: Part I.—Spelling Rules. Part II.—Endings occasionally confused, &c. Part III.—Words of like sound, &c. Part IV.—A complete vocabulary of the more difficult words in common use. Part V.—Miscellaneous (very useful for the reading student).

The Violet Crown and the Seven Hills. (Book II of "The Ancient Civilisations" Series). By EMILY M. BURKE, L.L.A., Senior Mistress, Hornsey County School. Crown 8vo, cloth. Price **3s. net.**

"This is the story of the glory that was Greece and the grandeur that was Rome. . . Miss Burke's is a pleasant method, for she never bores us with too many hard facts, and her historical outlook is that of a well-equipped scholar who is conscious that a good deal more than what old-fashioned history books would have given is necessary to explain the ancient world. She talks rather than writes, quotes poetry, and can appeal when necessary to modern instances."
—*The Times Educational Supplement.*

READY SHORTLY.

A Regional Geography of the Six Continents. By ELLIS W. HEATON, B.Sc., F.G.S., Head Master of Municipal High School, Tynemouth. Author of "A Scientific Geography," "Senior Scientific Geography," and "Junior Scientific Geography."

Book I.—EUROPE. Crown 8vo, cloth, 143 pp. With 45 Maps and Diagrams. New Edition, containing an Appendix on "The New Europe after the War." Price **2s. net.**

Suitable for those taking CENTRAL EUROPE. Treated under Ten Sections as follow: Arctic Europe, The Colder Atlantic Border, The Baltic Basin, The North Sea, The British Archipelago, The Warmer Atlantic Border, Switzerland and the Alps, The Mediterranean, Danubian Countries, The Great Plains of Russia.

Book IV.—AFRICA. Crown 8vo, 80 pp. With 16 Maps and Diagrams and 7 Photographic Plates. Price **1s. 4d. net.**

Treated under Ten Sections as follow: The Atlas Region, The African Fringe of the Mediterranean, The Sahara, The Sudan, The Guinea Coastlands, The Congo Basin, The Nile Basin and the Red Sea, The East African Tablelands, The Zambesi Country, S. Africa.

REVIEWS AND MINOR NOTICES.

CLASSICS.

Euclid in Greek. Book I. With Introduction and Notes by Sir T. L. HEATH. (10s. net. Cambridge University Press.)

Scholars will be grateful both to Sir Thomas Heath and to the Cambridge University Press for this beautiful book. We are old fashioned enough to like Euclid, and to see his familiar propositions thus set out in the Greek text, splendidly arranged on excellent paper, is to realize that they are things of beauty. The volume contains a long introduction dealing with the other works of Euclid (beyond the Elements) and tracing the fortunes of our text down the ages with full biographical details of commentaries. Then comes the Greek text of Book I, followed by very lengthy and lucid notes which rather err on the side of meticulous care to leave nothing unexplained. In his preface Sir Thomas expresses a hope that the book will be useful in the top forms of schools, the combination of Euclid and Greek (two school subjects not over popular just now) being rather a commendation than otherwise in his eyes. In this we heartily agree with him; but the price of the book is against it as a school textbook, and the introduction seems written rather for the bibliophile than for the schoolboy.

The Trees, Shrubs, and Plants of Virgil. By J. SARGEAUNT. (6s. net. Blackwell.)

This is a companion volume to Mr. Royds's "Beasts, Birds, and Bees of Virgil," published in the same format as that of Mr. Warde Fowler's recent works on Virgil. Mr. Sargeant will have earned the gratitude of all Virgil lovers who are wise enough to procure his book. He is obviously well qualified for his task—we can well believe, as the preface remarks incidentally, that he has more than half of the flowers and plants mentioned by Virgil growing in his own garden in Surrey—and has fulfilled it in a most scholarly way. The book is arranged, like a glossary, on alphabetical lines, a short descriptive article being given to each plant or flower under its Virgilian name, and there is also a list of Italian and scientific names at the end, so that the student can readily find what he wants, whatever may be his avenue of approach. We have all known from our schooldays that *laurus*, for example, is not the English laurel, but few of us are such qualified botanists as not to find considerable enlightenment in Mr. Sargeant's discussions, who always treats his points fully, though succinctly, raising such interesting things as the precise meaning of the Latin words for different colours and the like fascinating but elusive topics.

EDUCATION.

Nursery Schools: a Practical Handbook.

By VARIOUS EDUCATIONISTS. (5s. net. Bale.)

This book, which very well deserves the epithet "practical," consists mainly of seven papers on various aspects of the nursery school problem, each treated by a competent authority. The anonymous but useful introduction deals broadly with certain medical and hygienic questions. So also does Dr. Howarth's chapter, later in the book. Miss McMillan, whose theme is "The Ideals of the School," writes as we should have expected after reading her recent volume on nursery schools. One of the most refreshing chapters is that in which Miss Clara Grant emphasizes the inherent weakness of the English "infants' school," and points the way to an improved organization which would mean "the passing of the infants' school." Miss Grace Owen makes some good general suggestions, and Miss Hawtreys deals with the training of the nursery school teacher. The views of the Training College Association on the latter question are quoted in an appendix. Another appendix gives the Board's regulations for nursery schools. Altogether, the book is quite useful, but we think the price too high, even in these days of comparatively dear books.

Psychoanalysis. By BARBARA LOW. (5s. net. Allen & Unwin.)

Dr. Ernest Jones, in a brief preface, certifies that Miss Low has succeeded in her attempt "to present all aspects of the psychoanalytical theory fairly and straightforwardly." We endorse the certificate, but we would advise Miss Low, if she wishes to enlist the sympathy of "those who have made no previous study of the subject," to conciliate them by omitting some of the more offensive illustrations found in the text. Those who write on this subject are apt to forget that the general public has to be convinced of the value of the method. Its good points can be best brought out by an emphasis on sublimation, and we are glad to note that in dealing with educational applications Miss Low fully recognizes this, notably on page 179. The exposition as a whole is remarkably well done; but, with Stout's two volumes on "Analytical Psychology" already in the market, it is strange that Miss Low should credit Dr. Jung with inventing this "new name." It is hardly true that "in sleep the censorship is abrogated." Why does Miss

Low omit from her bibliography Dr. Nicoll's valuable book on "Dream Psychology"? There is no index.

Report of the Eighth Annual Conference of Educational Associations. (4s. post free. Conference Committee, 9 Brunswick Square, W.C.1.)

On pages 347-9 of this report we find the names of forty-three associations affiliated to the Conference. We still miss the names of some of the most important associations of teachers, but this is perhaps only to be expected. After all, it is the smaller associations that stand most in need of the help that comes from co-operation. On the other hand, there is a certain saving of time and energy in having meetings held at one centre, and some of the greater gods among the associations might benefit by countenancing the Conference, even if they hold their own ordinary meetings at separate times and places. Like a sheep's head, this report contains a great deal of mixed feeding, and there are few who will not find within its paper covers something to their advantage. It is most convenient to have within one volume so many contributions that we would otherwise have to search for in the back numbers of periodicals. The editors have done well to give lists of the subjects discussed and of the names of openers of discussions. The value of the volume would be greatly enhanced if they could stand the expense of providing a detailed index.

"The Modern Educator's Library."—*The Teaching of Modern Foreign Languages in School and University.* By Prof. H. G. ATKINS and H. L. HUTTON. (6s. net. Edward Arnold.)

Two eminent teachers—one long associated with the University of London, the other with Merchant Taylors School—have collaborated in this useful book. It is useful because it crystallizes the best opinions on many problems connected with modern language teaching. At a time when there is in some quarters a tendency to lay excessive—almost exclusive—stress on colloquial fluency, it is refreshing to find the national aspects and humanistic ideals stated with conviction and force. There is a judicious discussion of the question what place teachers of foreign nationality should occupy on school and university staffs; the problem of encouragement by scholarships is well stated; and there are very wise words about the London Intermediate Arts Examination: the Honours Course at the University should not be impeded by what is really school work taking up most of its first year. The new scheme for Civil Service Clerkships (Class I) receives the warm commendation it deserves. The chapter on the organization of work in secondary schools contains much sound matter, and many valuable hints are given on method, especially as regards the teaching of grammar. Due stress is laid on the acquisition of the vocabulary. The importance attached to history is a feature of the book, and in this the authors are in agreement with the Report of the Government Committee on Modern Languages. It is natural that French should be the language chiefly treated, but a chapter is devoted to the second foreign language, and here we find an admirable discussion of the claims of Latin, which will give our classical friends a good deal to think about. The points in this book which seem to us open to criticism are too trifling to deserve mention in this brief notice; its merits are such that it should be added at once to every teacher's library.

Education in England in the Middle Ages. By Dr. A. W. PARRY. (7s. 6d. University Tutorial Press.)

These 244 closely printed pages represent a thesis approved for the degree of Doctor of Science in the University of London. One wonders what connexion this subject has with science, but accepts with satisfaction the strictly scientific spirit in which the text is written. Dr. Parry has given us a bit of genuine research, sound in all essentials, and thoroughly well documented. But, while technical enough to satisfy university examiners, and full enough of foot-notes to disarm the most pedantic, the book is readable and full of human interest. It deals with matters that have a bearing on current problems, and Dr. Parry is not afraid to question the conclusions of even the most august of his predecessors, as witness his defence of the literal meaning of "pauperes et indigentes." His chapter on "Some Terms in Dispute" is particularly valuable, as throwing much needed light on certain dark places. Dr. Parry follows Prof. Adamson's commendable plan of trying to get at what actually took place in the inside of those old-time schools, and one closes the book with an increased knowledge of old-time conditions. University teachers of education will cordially welcome this addition to the literature of their subject.

FRENCH.

The French Quarterly. (3s. net. Longmans.)

To the many Englishmen in whom the War has roused or strengthened an interest in France and the French we recommend *The French Quarterly*, edited from Manchester by Profs. Rudler and

Terracher. It will keep them *au courant* with contemporary literature, with historical research, and with the most recent suggestions in philology. The number for March is the first of a new volume. It opens with an article by M. A. Meillet, Professeur au Collège de France, on "La civilisation égéenne et le vocabulaire méditerranéen," in which it is conjectured that such words as *vin*, *huile*, and *rose* are survivals from the period of Aegean civilization anterior to the arrival of Indo-European tribes in the Aegean basin. In another article M. Gustave Lanson argues forcibly for the attribution to Pascal of the "Discours sur les passions de l'amour," and describes it as the only document throwing a light on the inner Pascal during the most obscure part of his life. We observe that M. Lanson writes of *cette rédaction timide et camouflée*. Has the French Academy given its sanction to the verb *camoufler*?

GEOGRAPHY.

The Geography of Plants. By Dr. M. E. HARDY. (7s. 6d. net. Clarendon Press.)

This attractive volume will be a welcome addition to the geography textbooks used by the upper forms in secondary schools. The scope of the work is much more comprehensive than the title would seem to suggest. The relief, soil, and climatic conditions of the various natural regions are first carefully described, and then the resulting vegetation is explained. This method of treatment enables the reader to visualize the landscape, and to compare different types of scenery. Herein lies the great value of the book to teachers of geography. In the text the author gives, as a rule, the common names to plants and trees, reserving the Latin names for a plant index at the end of the book. The chapters are illustrated with beautiful pictures and well drawn maps.

A New Geography of Scotland for Secondary and Higher Grade Schools. By Dr. M. I. NEWBIGIN. (3s. 6d. net. Russell.)

Written by a well known authority on the subject, this geography can be thoroughly recommended to teachers who are giving a special course of lessons on Scotland. The work is evidently the result of much careful thought, and it contains many original ideas. After giving a good account of the physical geography of the country, the author devotes the second half of the book to human geography, and in this section the chapters on the peoples of Scotland, place names, industry, and trade are particularly interesting.

"Macmillan's Graphic Geographies."—*The British Empire.*

By B. C. WALLIS. (1s. 6d.)

This book contains a fairly detailed account of the larger parts of the British Empire, followed by some useful chapters on Imperial Trade and the Growth of the Empire. Five coloured contour maps, together with many black-and-white maps, make an atlas almost unnecessary. Some of the questions asked refer to matters not dealt with in the text. Without some help, how can a boy be expected to indicate on a map the route (with stopping places) followed by the first aeroplane that went from England to Australia (page 24)?

"The Atlas Geographies."—*Introduction to Commercial Geography.* By T. FRANKLIN and E. R. SHEARMER. (2s. 8d. net. Edinburgh: Johnston. Macmillan.)

The great merit of this book is the clearness with which all the lessons are arranged; the lessons are also divided into paragraphs, with a suitable heading for each. In the first part of the work there are good descriptions of the natural conditions affecting commerce, transport by land and water, industries, and other subjects. In the second part the more important products of the world are classified and short notes written about each. Useful statistics are added to some of the paragraphs, and good maps and diagrams illustrate the various lessons.

"The New Teaching Series."—*The Geography of Commerce and Industry.* By R. S. BRIDGE. (4s. 6d. net. Hodder & Stoughton.)

This book is planned for a three years' course, and is, therefore, divided into sections dealing with general principles, the British Isles, and the countries of the world respectively. In the early chapters of the book there are some satisfactory explanations and useful suggestions. Mention may be made of the lessons on (a) the development of trade routes, (b) capital, labour, and commerce. Later, however, the pages are filled with place names, and the descriptions are lacking in detail; e.g., Chapters xxii and xxiii read too much like a railway guidebook to be at all interesting to boys. Lists of steamship companies (pages 103-104) should be printed at the end of the book for reference, instead of appearing in the text. In the section on the British Isles, the writer discusses the relative importance of various seaports, seven pages being devoted to a comparison between Bristol and Hull; but, with regard to the growth of London as a seaport, he leaves the student

(Continued on page 414)

Cambridge University Press

A NEW GEOMETRY BY C. GODFREY, M.V.O., M.A., AND A. W. SIDDONS, M.A.

Practical Geometry

Crown 8vo. Price 5s net; or in two Parts, 3s net each:—Part I, Straight Line, Similarity, Area; Part II, Circle, Loci and Envelopes, Solid Geometry

A book designed to take the average student through the course indicated by the age of 15. With this object, the usual formal methods of teaching Geometry have been abandoned whenever an informal method seemed educationally preferable. Certain propositions, however, are still presented in the traditional way, the authors believing that the logical attitude towards Geometry must be cultivated, and is cultivated better by a *gradual* progress than by a sudden jump

Theoretical Geometry

Crown 8vo. Price 3s net

A sequel to *Practical Geometry* for those who continue their mathematical education beyond the age of 15 or 16. This is a succinct formal presentation of the propositions of the Cambridge schedule, designed to knit together the knowledge already acquired

Practical Geometry and Theoretical Geometry.

A prospectus will be sent on application, and requests for specimen copies will be considered.

Life and Labour in the Nineteenth Century.

Being the substance of Lectures delivered at Cambridge in the year 1919 to Students of Economics. By C. R. FAY, M.A., Fellow and Lecturer of Christ's College. Demy 8vo. 20s net

The Teaching of History.

By E. L. HASLUCK, M.A., F.R.Hist.Soc. Crown 8vo. 8s net. Cambridge Handbooks for Teachers.

This volume is intended to provide teachers with some information as to the directions in which improvements in method have been suggested by various authorities, and to indicate the points where recent experiments have accomplished an acknowledged advance on previous practice.

Cambridge Readings in French Literature.

Edited by ARTHUR TILLEY. Crown 8vo. With 24 reproductions of famous pictures. 8s net

Besides the general aim of presenting a variety of extracts good in themselves and interesting for their subject-matter, it has been the particular aim of the present selection to illustrate the history of France by a record of some of her famous sons.

Selections from Saint-Simon.

Edited by ARTHUR TILLEY, M.A., Fellow and Lecturer of King's College, Cambridge. Crown 8vo. 7s 6d net

In making his selection the editor has practically confined himself to the first two-thirds of the *Mémoires*, that is to say, to the reign of Louis XIV, and he has chosen the passages with a view to illustrating that reign during the period of its declining splendour. The notes are confined to illustrating Saint-Simon from himself, and to supplying such other biographical details as seemed necessary.

Selections from Sainte-Beuve.

Edited by ARTHUR TILLEY. Crown 8vo. 6s net

"This is an excellent book for the student of French literature. Sainte-Beuve may have been despicable as a man, but no one can afford to despise him as a critic. Mr. Tilley has made a thoroughly representative selection from his literary criticisms, to which he has prefixed an introduction containing a short, but admirably written, biographical sketch of the author."—*Secondary Education*

A Junior French Reader.

By Prof. R. L. G. RITCHIE, M.A., and J. M. MOORE, M.A. Crown 8vo. 4s 6d net

This book is intended to provide suitable readings for pupils who have been learning French for two or three years. The passages, which it contains, are selected from standard authors; they illustrate widely different types of French prose and verse, and they are comparatively easy.

Cambridge Bulletin, No XXXVI, May 1920

giving particulars of recent publications of the University Press, will be sent on application.

Thermodynamics for Engineers.

By J. A. EWING, K.C.B., D.Sc., F.R.S., Principal and Vice-Chancellor of the University of Edinburgh. Demy 8vo. With 99 text-figures. 30s net

This volume treats the subject mainly from an engineering standpoint, but with sufficient generality to be useful to students of physics. The author's method is first to make readers familiar with the physical bearing of the fundamental ideas by means of an elementary introduction, and by dealing with practical problems in the theory of heat engines and of refrigeration. After this a more mathematical treatment is given of general thermodynamic relations, and the usual equations are derived.

Examples in Heat and Heat Engines.

By T. PEEL, M.A., Fellow and Lecturer of Magdalene College, Cambridge, University Demonstrator in Engineering. Demy 8vo. Paper covers. 5s net

Coleridge and Wordsworth.

Coleridge's *Biographia Literaria* (Chapters I-IV, XIV-XXII) and Wordsworth's Prefaces and Essays on Poetry, 1800-1815. Edited by GEORGE SAMPSON, with an Introductory Essay by Sir ARTHUR QUILLER-COUCH. Crown 8vo. 10s net

"Mr George Sampson, who has so often solved the problem of how to edit a book delightfully, has given us an edition of Coleridge's *Biographia Literaria* which no student of poetry and criticism should be without." *The Daily News*

Cambridge County Geographies.

Two new volumes in this series are now ready, price 3s 6d net each

Dumbartonshire.

By F. MORT, D.Sc., F.G.S.

Orkney and Shetland.

By J. G. MOODIE HEDDLE and T. MAINLAND

"The teacher cannot hope for better books than this series of County Geographies. . . . Physical geography, scenery, natural history, agriculture, industries, and so forth are all dealt with in a way that must interest any child, and that will render any boy or girl . . . an intelligent student of his county."—*The Morning Post*

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

to solve the problem for himself, suggesting only that the answer lies in the position of London as a distributing centre. It is extremely doubtful whether the average schoolboy possesses sufficient historical knowledge to solve such a difficult problem without more help. A few rough diagrams are inserted in the text, but, as a rule, they are of little value. The one on page 218 is incorrect and misleading; Washington, Buffalo, Duluth, and Chicago are not Atlantic ports, and, without a coast line drawn, it is useless to show the relative position of seaports.

"Philips' Model Geography."—Asia. Fourth Edition, revised. (9d.)

In preparing a fourth edition of this book, it is a pity that the reviser did not bring it into line with the better type of book now more generally used in schools by striking out the lists of names which can be read more advantageously from an atlas. Too much information is crowded into the small space of ninety-five pages. Fairly good descriptions are given of the north-west frontier of India, irrigation in India, the natural regions of Siberia, and some other features of Asia.

HISTORY.

A Short English Constitutional History for Law Students. By E. HAMMOND. (7s. 6d. net. Sweet & Maxwell.)

This is a law-tutor's summary of English Constitutional History, intended as a guide to his pupil's reading. It is very brief. Of the 164 pages, one-half are left blank for supplementary notes. Within its compass it provides compact information concerning (1) the characteristics of the English Constitution, (2) the Crown, (3) Parliament, (4) the Courts, (5) the Privy Council and the Cabinet, and (6) Miscellaneous Matters. It is a useful compendium for the examinee.

A Short History of Wales. Fourth Edition. By O. EDWARDS. (3s. 6d. net. Fisher Unwin.)

This is a mere reprint, without any alterations or additions, of a book first issued in 1906. It was and is, however, a very good book by a front-rank authority, and, as it was out of print, it was well worthy of republication. No one could desire a better introduction to a fascinating study.

Diplomacy and the Study of International Relations.

By D. P. HEATLEY. (7s. 6d. net. Clarendon Press.)

Mr. Heatley has produced a work original in conception, scholarly in execution, and of profound interest to all serious students of foreign affairs. It is a sketch of the history of international relations from the beginning of modern times to the present day—roughly, the last four hundred years. It is also a summary of the reflections and remarks of the most important writers of the period on the question of the conduct of foreign policy. The book is divided into two sections. The first (pages 1-84) treats generally of diplomacy and the dealings of nations with one another. The second (pages 85-215) describes in detail and with much valuable criticism the literature of international relations. The most important branches of literature discussed are (1) legal, (2) political, and (3) ethical. Under the first head materials are indicated for the study of the development of international law; under the second, the course of several great controversies is traced; under the third, among other things, the leading schemes for the maintenance of perpetual peace are examined. Two long appendixes of quotations (pages 216-284) completes this valuable storehouse of information. It is a monument of erudition made practically useful.

A History of Great Britain. By JAMES MUNRO. Part II: 1603-1919. (6s. net. Oliver & Boyd.)

This volume is a sequel to Mr. Munro's "History of Great Britain" to the date of the union of the two crowns of England and Scotland. It was, its author tells us, all but ready for publication in 1914 at the outbreak of the war. That event held it up. The delay, however, has resulted in the addition of four new chapters to the original thirty-three, in which the causes, course, and consequences of the war are briefly but judiciously reviewed. Mr. Munro writes from full knowledge and with an admirable balance of judgment. As becomes a former lecturer in Edinburgh University, writing for a Scottish publisher, he gives a useful and interesting prominence to the affairs of the northern kingdom. As becomes the Beit Lecturer in Colonial History in the University of Oxford, he treats the growth of Greater Britain with expert insight and with authoritative accuracy of detail. Many attractive illustrations adorn the pages of the book, and all the maps and plans are given which are required to make the narrative clear. A valuable time-chart concludes the volume, excellently summarizing its main points. One serious defect alone is evident: there is no index. It is imperative that one should be supplied in all future editions.

A Short History of the Great War. By A. F. POLLARD. (10s. 6d. net. Methuen.)

Prof. Pollard did good service to the country during the course of the war by his popular lectures at University College, London, on the problems at issue, and by his numerous articles on the historical antecedents of the states engaged in the conflict. The present volume summarizes his studies, and supplies, in a concentrated and convenient form, a review of the whole of the vast struggle, from the murder of the Archduke Francis Ferdinand in June, 1914, to the making of the Peace of Versailles in June, 1919—five years to a day from the perpetration of that tragic crime which precipitated the war. Prof. Pollard is a master of the art of popularization. He surveys the whole scene with a comprehending eye. He discerns its salient features. He plans it for descriptive purposes into convenient and well co-ordinated sections. He writes with terse and epigrammatic vigour, with perfect clarity, with easy grace. The book is one which holds the attention of the reader from beginning to end. Even those who have followed the war closely will find new lights from this penetrating record. Prof. Pollard's opinions may not always command assent, but none is eccentric or the product of prejudice.

The New Germany. By GEORGE YOUNG. (8s. net. Constable.)

Mr. Young went out to Germany in January, 1919, first as a correspondent of the *Daily News*, to describe the revolution then in process, and, secondly, as a member of the Independent Labour Party, "to take any opportunity that might offer of furthering that revolution." He saw what he went to see, and he heard what he wanted to hear. Many opportunities occurred for furthering the revolution, and he evidently used them to the full. This narrative of his activities during the six months February to August, 1919, is undeniably interesting, for it tells in an attractive style a tale of many exciting adventures and narrow escapes. But the whole story is vitiated as a serious study by the writer's prejudices and passions. His sympathies are with the Spartacists and other irreconcilable and visionary destroyers of social order. He has nothing but words of hatred and contempt for those who tried to maintain some sort of constitutional government amid the mad riotings of the spring of last year. He treats parliaments as effete institutions, and advocates a Soviet administration. Yet every story he tells is eloquent of the utter incapacity of the extremists to form any sort of a polity, or even to work peaceably with one another. The New Germany is a nightmare.

(1) *Social Life in England through the Centuries.* By H. R. W. HALL. (2s. 9d. Blackie.) (2) "Highroads of History, Book XII."—*Highroads of Social History.* By S. CUNNINGTON. (2s. 9d. Nelson.)

Only recently have we had occasion to notice social histories by Dr. Bradshaw and Miss Wilmot-Buxton, and now two more lie upon our table. The increasing attention paid to the life and progress of the people clearly indicates the tendency of the time both in education and in politics. No two writers, however, are quite agreed as to what the content of social history should be. In Dr. Bradshaw's hands it was hardly distinguishable from the old-fashioned economic history. Miss Wilmot-Buxton regarded it as primarily a record of changing manners and fashions. Mr. Hall, in the very charming book before us, treats of things so various as pit-dwellings, earthworks, Roman villas, English towns, Norman castles, Tudor houses, fairs, markets, churches, roads, and railways. With him social history is mainly a branch of antiquarian lore. Whatever he touches, however, he makes interesting, and he illuminates his pages with many delightful photographs and prints. Miss Cunningham's book, after a short introductory sketch, proceeds to discuss (1) the home, (2) town and country, (3) the nation, and (4) the State. It is a marvellous storehouse of curious information, and its coloured illustrations are particularly fine.

MATHEMATICS.

"The University of Chicago Mathematical Series."—*Correlated Mathematics for Junior Colleges.* By E. R. BRESLICH. (6s. 6d. net. Cambridge University Press.)

This is the fourth book of a series designed for use in American high schools, the characteristic feature being the treatment of various mathematical topics in combination, and once for all. It is claimed "that this four-year course is able to cover in the usual time allotted to high school mathematics, in addition to the customary high school courses, plane analytics and college algebra as given in American colleges, together with considerable work in differential calculus." The present volume contains higher algebra, including the elements of the theory of equations and co-ordinate geometry. In addition to the conic sections some of the better known higher plane curves are discussed. The course seems well calculated to impart a sound knowledge of fundamental principles.

Physical Geography. By P. LAKE, M.A. 12s 6d net [Senior]

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

though it will not teach a student to become expert in that mathematical jugglery which we still expect our candidates for entrance scholarships to acquire. The get-up and appearance of the book are very attractive, and the interest of the student in the subject is stimulated by portraits of noted mathematicians and by historical notes.

An Algebra for Engineering Students. By G. S. EASTWOOD and J. R. FIELDEN. (7s. 6d. net. E. Arnold.)

In this book it has been the aim of the authors to furnish the engineering student with all the algebraic principles and processes which he should master before commencing the calculus. Naturally, great prominence is given to graphical methods, including the construction of the alignment chart, which now figures largely in engineering literature. Rigid proofs of many theorems are out of place in a book of this character, but conviction of their truth will be attained by a study of verifications and illustrations of their application. The examples are judiciously selected, and, as far as possible, have a direct bearing upon engineering problems.

Elementary Plane Trigonometry.

By H. E. PIGGOTT. (7s. 6d. net. Constable.)

This is an excellent book for boys who have in view a career in which a practical knowledge of trigonometry is required. Much pains are taken to lay the foundations securely. Numerical calculation is put in the foreground, and numerous examples are given of the proper way of using books of tables, while repeated injunctions are given regarding the necessity of orderly arrangement and of the application of checks in order to secure accuracy. The problems discussed are chiefly such as occur in surveying, navigation, engineering, and physics; comparatively little space being devoted to pure transformations. In dealing with angles of any magnitude, Mr. Piggott has discarded the usual convention. He draws his zero line to the north, and takes the clockwise direction of rotation as positive. This is in accordance with the "Gyro-compass" system of bearings, and perhaps is to be preferred for some practical purposes; but there are good reasons for adhering to the usual convention, and the student who intends to pursue his mathematical studies further would be well advised to observe it.

The School Geometry, Matriculation Edition. By W. P. WORKMAN and A. G. CRACKNELL. (4s. 6d. University Tutorial Press.)

This is an edition of the "Geometry, Theoretical and Practical" by the same authors, adapted to the needs of matriculation students. The range covered is that of Euclid I-IV, but the order of proof closely follows that indicated by the Cambridge Local Examination Syllabus. The model solutions of typical riders, and the indications given in the earlier pages of the theorems to be used in solving the exercises, should render the book particularly useful to private students.

MISCELLANEOUS.

Essays, Old and New. By ELIZABETH WORDSWORTH. (7s. 6d. net. Clarendon Press.)

We confess that when we took up this book, by the first principal of Lady Margaret Hall, we expected to find that it would make its main appeal to the comparatively limited circle who had come under the writer's direct personal influence. We had not read far before we discovered the fact to be quite otherwise. For quiet humour, for literary charm, and for the native wisdom that is left unspoiled by acquired learning, these essays bear the unmistakable marks of distinction; and their breadth of view should make them more than acceptable to all classes of cultured readers. The first essay, which establishes a contrast between Goethe's "vague sentimentality and moral feebleness" and Dante's "thorough, distinct, masculine, honest and therefore most pure and most delicate treatment of great ethical questions," was written more than forty years ago, and the writer is justified in the postscript which shows how some of the ideas then expressed have since been realized. The essays entitled "At Stratford-on-Avon," "Behind the Scenes," "Flattery," and "The English Church and the English Character," have especially captivated us, though where all is so good comparisons are invidious. Our one breath of criticism is that in the essay on Jane Austen the seamy side of English life in her day should have been so completely ignored. But Miss Wordsworth has rendered a true service to thoughtful people by sending forth this collection of things "new and old," and we hope it will have a large sale.

The Romance of Modern Commerce. By H. O. NEWLAND. (6s. net. Seeley, Service.)

On the title-page of his volume Mr. Newland calls it a popular account of the chief articles of commerce. It is a good deal more than this, for every chapter is packed full of valuable information which makes the book suitable as a work of reference for teachers and students of commercial history and geography. The author,

who was the founder of the British West African Association, draws upon his own personal experience in the African forests, and by his vivid impressions brings home to his readers the romance of his subject. His experience as a lecturer also enables him to arrange his facts in a skilful manner. In the first chapter he traces the evolution of commerce from tribal barter to international intercourse. Each of the principal commodities—wheat, tea, coffee, rubber, cotton, timber, cattle, and so on—has a chapter to itself. The effects of the World War are discussed adequately throughout the book, and the last chapter deals with the possibilities of air transport. The binding is attractive, the print large and clear, and there are seventeen good photographs. In occasional passages the author drops into alliteration, and the style is not pleasing; as, for instance: "The fascination of the forest is fearful," and "While commerce may often have caused conflicts, war and conquest have frequently created a commerce." There appears to be something wrong with the equation on page 162.

Holiday Addresses and a Holiday Gazetteer.

(1s. net. Evans Bros.)

The 600 addresses in this book have been personally recommended by teachers who have spent holidays in the houses named.

Manual of Military German. By F. W. C. LIEDER and R. W. PETTENGILL. (6s. 6d. net. Harvard University Press.)

There can be no two opinions about the thoroughness of this book: it contains a skeleton grammar (26 pages), word-lists mainly, but not entirely, of military and naval terms, containing some 8,500 vocables, 247 pages of reading selections, a vocabulary, list of abbreviations used in the services, and tables of ranks in the Army and Navy, insignia, weights and measures, and other things. The work is, therefore, complete in itself, and the student needs the help of neither grammar nor dictionary. It is intended for those who wish to become acquainted with military German and for no others. It ought to answer its purpose well. The reading matter consists partly of German reports, orders, and proclamations, and partly of narratives and descriptions drawn, we understand from the preface, from German sources. The sections are mostly short, and, though they have no pretensions to literary merit, they are always lucid and straightforward, and contain much interesting information. The book is printed entirely in Roman type, except for five specimen pages of Gothic.

Fairies and Chimneys. By ROSE FYLEMAN. (3s. 6d. Methuen.)

A number of these verses have appeared in *Punch*. That paper has a *flair* for children's likes; and probably (but there's no promising), if a mother or elder sister took the trouble to learn and say Miss Fyleman's verse, the children would consider *Punch* wise. "Cat's Cradle" and "I don't like Beetles" deserve inclusion in a selection made by children themselves.

MUSIC.

The Foundations of Music. By Dr. H. J. WATT. (18s. net. Cambridge University Press.)

This is an erudite volume of remarkable interest for the psychologist and the musician. Although what may be described, in common parlance, as a "stiff" book, the clarity of the author's style renders many hard things palatable. Dr. Watt's aim is to trace the growth of the accepted laws of civilized music, especially those dealing with consonance, dissonance, and "consecutives," accompanying his researches with ample psychological commentary. The merely doctrinal assertions of musical theorists receive more attention at times than they seem to deserve, and it is a pity, perhaps, that harmony rules receive such ample elucidation, whilst the far more natural and abiding laws of strict counterpoint are not dealt with or discussed so fully. Indeed, the author gives emphasis to the defects of his own procedure when, in summing up, he states that the "Fount and origin of probably all music whatever is melodic movement," and that music is the "concourse" rather than the "concord" of sweet sounds. The later chapters, however, which deal with "The Objectivity of Beauty," and with "Aesthetics as a pure Science," succeed in bringing his theories well into focus, and at the same time supply a counter-appeal which balances the technical character of the greater part of the volume. The importance of Dr. Watt's book is not to be denied, and earnest musicians will do well to review the axioms and dogmas of their craft afresh in the light of this exhaustive and illuminating criticism.

SCIENCE.

"The University of Chicago Nature-study Series."—A *Source-Book of Biological Nature-study.* By E. R. DOWNING. (3 dols. net. Cambridge University Press.)

There is obviously much to be said for the practice, commoner in America than in this country, of framing courses in Nature-study

(Continued on page 418.)

TEACHERS REGISTRATION COUNCIL

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, Feb. 29, 1912.)

THE Teachers Council was formed at the special desire of the teachers of the country. This desire was expressed through the various Associations and Societies of Teachers. It is clearly formulated in the following extracts from the Objects of the National Union of Teachers:—

“To secure the compilation of a comprehensive Register of Teachers.”

“To secure the solidarity and extend the influence of the Teaching Profession.”

The aims thus set forth are sought by teachers of all types. Solidarity can be attained only by the unification of the teaching profession, and of this unification the Official Register of Teachers is the outward symbol. Teachers who are qualified for Registration should therefore become Registered without delay in order to show that they are loyal to the best interests of their calling and prepared to do their share in extending the influence of their profession.

The Teachers Council is a representative body composed entirely of teachers who are chosen by Associations and Societies of Teachers. No fewer than 42 such bodies are represented on the Council, in addition to the Staffs of eleven Universities.

It began the compilation of an Official Register of Teachers early in 1914, and in spite of the grave handicap imposed by the War, the number of applicants for Registration is now

40,000

The Council has been able to bring together the views of teachers of all types, and while not attempting to control the policy of any section or association, it has undoubtedly done much to foster united action and harmony of purpose, and to lay the foundations of a real profession.

IMPORTANT

The Council desires to make known to all Unregistered Teachers that:—

1. The full **CONDITIONS OF REGISTRATION** will come into force at the beginning of the year 1921. Up to 31st December, 1920, teachers may be admitted to Registration on proof of **EXPERIENCE ALONE**, under conditions satisfactory to the Council. After that date proof of **ATTAINMENTS** and **PROFESSIONAL TRAINING** will be required.
2. The **OFFICIAL LIST OF REGISTERED TEACHERS** is now being revised. Entries for the Revised List will close on **WEDNESDAY, 30th JUNE, 1920.**
3. On and after the same date, **WEDNESDAY, 30th June next**, the uniform fee for Registration will be **TWO POUNDS**, instead of **ONE GUINEA** as at present.

Teachers who are not already Registered should complete the form below and post it without delay to the offices of the Council.

To the **SECRETARY, TEACHERS REGISTRATION COUNCIL,**
47 Bedford Square, LONDON, W.C.1.

Please forward.....Form(s) of application for Registration to

J/E.

with the avowed object of emphasizing the social and "practical" importance of a familiarity with the life histories of plants and animals. Many excellent textbooks on utilitarian lines have already appeared, and the present volume may be welcomed as one of the most successful of its kind. As the title indicates, it is to be regarded as mainly a compendium of information; but teachers will find it useful not only for the sake of the facts it describes, but also because of the suggestions it contains as to the most effective methods of presenting the subject to students. Naturally, many of the animals and plants referred to, though common enough in America, are unknown here. The book is arresting in style and not overburdened with technical detail, the chapters on animal life being especially interesting. Unfortunately, many of the photographic illustrations are lacking in clearness. On the other hand, the sketches are excellent, though they would be more useful if their scale were stated.

The Engineering Draughtsman. By E. ROWARTH.
(7s. 6d. net. Methuen.)

The volume is intended for students who have already some acquaintance with engineering drawing, and is an attempt to extend his knowledge by imposing upon him conditions similar to those under which a junior draughtsman works, so far as it can be done in a college course. Some of these conditions cannot be secured by means of any textbook, e.g. the measurement of a machine part with the view of making working drawings, so that the part can be duplicated; and again, chief draughtsmen often make crude sketches which juniors have to work up in drawings. The present volume will be found to cover in an excellent manner all the other branches of work which a junior draughtsman may be reasonably expected to perform. The general arrangement drawings from which separate detail working drawings have to be made, and detail drawings from which general arrangements are constructed, cover a wide field, and therefore avoid the error of specialization. They are for the most part up to date, and include ordinary machines, engines, and boilers, together with aeroplane engines, motor vehicles, electrical and hydraulic machines. In several examples, the dimensions are in the metric system, and these will afford useful practice. One or two of the pages are rather crowded; thus, on page 66 the drawings of the cylinders of a traction engine have been so reduced as to make it difficult to read some of the dimensions, despite the

careful draughtsmanship obviously displayed in the preparation. In addition to the objects the author had in view, for which the book is admirably suitable, we can recommend the volume also to those students who are preparing for intermediate university examinations in engineering drawing and design.

Intermediate Textbook of Magnetism and Electricity. By R. W. HUTCHINSON. (8s. 6d. University Tutorial Press.)

The author intends the work as a textbook up to University Intermediate standard, and has introduced at quite an early stage subjects which are usually postponed to a late stage in the study of electricity. The volume is copiously supplied with examples, some worked and others in the form of test questions for the students. The older method of dealing first with magnetism, then with electrostatics, and afterwards with electric currents, is followed. While the subject is fully treated, there is little doubt that a student of Intermediate standard would have to omit a considerable amount of the book—as, for example, Anderson's method of measuring self-inductance, and alternating currents, including the impedance of circuits having capacity and inductance. Methods of treatment involving the use of the integral and differential calculus would have to be modified or omitted by most Intermediate students. The introduction of complex before simpler ideas is of doubtful advantage, leading to frequent reiteration of the statement "this will be better understood after reading chapter —." Under proper guidance the student may find great help from the book, as it is well illustrated and the explanations are full.

Applied Chemistry. By Dr. C. K. TINKLER and H. MASTERS.
Vol. I: *Water, Detergents, Textiles, Fuels, &c.* (12s. 6d. net. Lockwood.)

This is a textbook which is written to cater for third-year students who are taking the University of London's Diploma in Household and Social Science. The first year of this course is of Intermediate Science standard, the second year is concerned with organic and physical chemistry, preparatory for applied chemistry and physiology, and the third year is concerned with water analysis, detergents, textile fabrics, bleaching agents, ventilation, fuels, paints, polishes, &c. As the authors rightly indicate, up to

PATON'S LIST of SCHOOLS and TUTORS.

An Aid to Parents in the Selection of Schools.

EVERY YEAR THOUSANDS OF PARENTS CONSULT THIS BOOK.

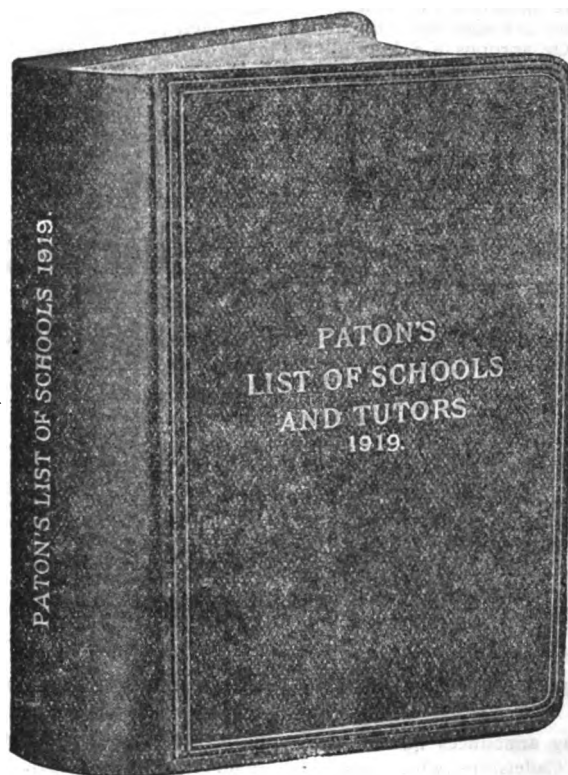

Dear Mr. Paton,

I shall be much obliged if you will insert my adv. again in your List of Schools. At any price it is cheap, for I know I get many more pupils than I can trace from your List. I know I have you to thank for the prosperity of my school.

March 26th, 1920.

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, one boy. Then I came under your Agency—result, a steady stream of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding-house."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term four pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

Specimen Copy and full particulars sent free of charge to Head Masters and Head Mistresses.

the present there has been no one publication (apart from the Chemical Dictionaries) which handle so catholic a selection of subjects, and hence the appearance of the book before us. The various sections are well and clearly written, whilst the practical details which are necessary for the successful carrying out of the determinations are fully and accurately described. The chapter on water analysis is brief, but admirably suited for the particular purpose in view. It perhaps would have been advisable to state on page 27 that a mixture of sodium carbonate and sodium hydroxide is a better medium than the carbonate alone for the determination of permanent hardness, whilst the nitrometer method for estimating nitrates and nitrites is worth more than a passing mention. In the chapter on Fuels the calorific value of coal is discussed, and the somewhat crude Thomson and Rosenheim calorimeters are described. It is surely high time that the Bomb calorimeter was recognized as the only trustworthy and accurate instrument for this purpose. These, however, are but matters of detail, and the book, as a whole, should be valuable for the class of students indicated.

Chemistry and its Mysteries. By C. R. GIBSON.
(4s. 6d. net. Seeley, Service.)

This is a pleasantly written and excellently illustrated children's book of popular "science." The author has apparently made a speciality of this type of publication, for the present volume is the fifth of a series in the "Science for Children Library." Perhaps the key-note to the series is contained in the following extract from a letter to the author:—"I hate the science we get at school, but I do like the kind of science you write about." Mr. Gibson has no sympathy with school science and its "dry particulars of measurements, specific gravities, and such details." He prefers this sort of thing: "Have you ever heard of radium? It is a very queer thing." Or, "We may suppose that we have made quite a lot of chlorine gas by heating in a flask some common salt with some black powdery stuff and some acid." Or, apropos of a description of an electrolytic experiment, "I think every boy and girl can guess that we are going to decompose the water." Such *suggestio veri* may be "popular science," but it is certainly not chemistry. In point of fact, it is very doubtful if any good can come of this watered down and bowdlerized exposition. Science is not necessarily an amusing mental picnic, and one would imagine that the

ordinary human boy would much rather experiment for himself than sit at the imaginary feet of a second-hand Gamaliel.

Science of Home and Community. A Textbook on General Science. By GILBERT H. TRAFTON. (8s. net. New York: The Macmillan Co.)

American teachers of science do not use the term, "general science," in the same sense as their colleagues in this country. In the States, general science is much more comprehensive in its scope than with us. Mr. Trafton, for instance, includes in the first part of his book, dealing with "The Science of the Home," subjects as diverse as a description of a Mazda lamp and bee-keeping; or an account of a kitchen range and the protection of birds from cats. The second part, entitled "Science in the Community," includes, among other subjects, means of travel and communication, public health, moving pictures, protection of birds and forests, and alcoholic drinks. Though we hope our schools will never offer so variegated a scheme of science instruction as that of Mr. Trafton, we are glad to know that there is a movement in the direction of broadening and humanizing our science syllabuses, and we commend this book to teachers of physics who are making experiments with the view of bringing their laboratory and lecture-room lessons into closer touch with everyday practice.

A Textbook of Hygiene for Training Colleges. By MARGARET AVERY. (7s. 6d. net. Methuen.)

This book covers the syllabus in hygiene of the Board of Education Certificate Examination for Training Colleges in a very thorough manner, and may be recommended with confidence. The physiology of nutrition, and of the skeletal, muscular, circulatory, respiratory, excretory, and nervous systems are explained simply, but with sufficient detail and in an interesting way, and their practical applications to the training of children in habits of healthy living are pointed out with convincing effect. Sections appealing with particular force to teachers and members of education committees deal with the equipment and maintenance of school buildings generally, and of special schools for afflicted children, with school medical inspection and treatment, child-welfare centres, nursery schools, and health-visiting. The greater part of the book, however, will be found of interest equally to the general reader and especially to persons having the care of children; for it is full of

(Continued on page 422.)

THE ROYAL NAVAL COLLEGE, OSBORNE

For information relating to the entry of Cadets, Parents and Guardians should write for "How to become a Naval Officer" (with an Introduction by Admiral the Hon. Sir E. R. FREMANTLE, G.C.B., C.M.G.), containing an illustrated description of life at the Royal Naval Colleges, at Osborne and Dartmouth, post free on application to GIEVES, Limited, 21 Old Bond Street, London, W.1.

Special Entry of Naval Cadets.

The Secretary of the Admiralty announces that the scheme of Special Entry to Naval Cadetships, which was instituted in 1913 will be continued for a further period. The examinations are held annually in June, and candidates are required to be not more than 18½, nor less than 17½, years of age on July 1st.

Regulations can be obtained on application to

These maps have been produced to meet the latest requirements for teaching Geography. A broad margin is left at the side of the Map, in which notes may be inserted by the pupil. Being reproductions from photographs of actual relief models, the effect obtained is precisely that which one would expect to find were it possible to view the earth's surface from a position in space.

The Publishers advise you to apply for specimen copies of these maps, as they are sure that you will find they meet your requirements.

sound advice and up-to-date views on exercise, ventilation, food, clothing, first aid in minor injuries and common ailments, and kindred subjects. Eugenics and legislation affecting school children are also matters of obvious concern to the community at large, and we are glad the author has included a short account of each. A very valuable chapter on mental and physical fatigue embodies important results of recent psychological research, and merits close study by all teachers and parents. The book is effectively illustrated and attractively produced.

Mammals, Vols. I and II: *The Natural History of South Africa.*

By F. W. FITZSIMONS. (9s. each. Longmans.)

The director of the Port Elizabeth Museum has prepared a series of volumes, of which these are the first two, in order to supply information about the ways and habits of the creatures of veld, forest, mountain, and stream which shall enable South Africans to distinguish between their friends and foes in the animal kingdom. Naturalists everywhere will endorse his hope that in South Africa and other countries where civilized man has not yet become firmly established, it may not be too late to plead for the enlightened protection of mammals, birds, and reptiles of economic value. The volumes before us deal with the monkeys, lemurs, bats, and carnivora (including sea-lions). The books are written in simple and pleasing style, without technicalities, and are enlivened by anecdotes of the habits of the animals and the adventures of the author and others. They will certainly appeal to lovers of animals who prefer their science well diluted, but would have been more widely useful had they been stiffened by some account of the diagnostic characters of the orders, sub-orders, families, and genera considered. To pass from insectivorous bats to lions without any indications of the magnitude of the step is a sheer waste of opportunity, and hardly fair to the reader. The systematic index with which each volume is provided is useful, but inadequate. The photographic illustrations—about 100 in number—are excellently done. Many of them are obviously of mounted specimens, but all are well posed and lifelike.

An Introduction to Anthropology. By the Rev. E. O. JAMES. (7s. 6d. net. Macmillan.)

This valuable textbook supplies "a general survey of the early history of the human race." The science which it expounds is comparatively new. As Mr. James points out, its development was not possible so long as the Miltonic view of the special creation of the perfect man in B.C. 4004 was regarded as an article of the Christian faith. The abandonment of that view, and the substitution of the idea of evolution, opened up the way to the investigations and discoveries which have given us a science of anthropology, although they have not yet sufficed to carry it beyond its tentative and rudimentary stages. As one reads Mr. James's careful and discriminating pages one is impressed by the scantiness of the data as yet brought to light, as well as by the uncertainty of the conclusions based upon them. Nevertheless, enough is known to make the study one of absorbing attraction, and those who are drawn to it could not do better than take Mr. James for their guide. He has read widely, he possesses a sound and impartial judgment on all matters that do not affect theology, and he summarizes his authorities clearly and well. He has produced an excellent introductory sketch.

An Introduction to General Physiology, with Practical Exercises. By W. M. BAYLISS. (7s. 6d. net. Longmans.)

Physiologists have come more and more to regard it as their task to refer, as far as they can, all phenomena of life to the laws of physics and chemistry. It is but natural, therefore, that in a manual of general physiology, such subjects as osmotic pressure, the colloidal state, surface tension, catalysis, and the chemistry of sugars and amino acids—which recent research has shown to be of outstanding importance in the vital processes of plants and animals alike—should receive special attention. Prof. Bayliss has given what many will consider an unduly large share of space to these and kindred topics, believing that without a thorough grasp of such fundamental conceptions a satisfactory understanding of modern physiological problems is impossible. This part of the book demands close attention and some preliminary knowledge on the part of the reader; but it is applied later in masterly fashion in the explanation of the work of the digestive, respiratory, muscular, nervous, and circulatory systems. Part II—nearly one-third—of the book consists of instructions for laboratory work bearing on the subjects of the earlier chapters. The experiments suggested vary considerably in simplicity, but they are all important and the details given will be of great help to teachers. While the general reader will probably find the book somewhat difficult to follow, the earnest student will welcome it as one of the best short expositions of present day knowledge and speculation in the field of physiological investigation.

UNIVERSITY OF ST. ANDREWS. **L.L.A. DIPLOMA FOR WOMEN.**

THE attention of Candidates is
drawn to the ordinary and Honours Diplomas
for Teachers, which are strongly recommended as
suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Bedford, Bel-
fast, Birmingham, Blackburn, Brighton, Bristol,
Cambridge, Cardiff, Croydon, Dublin, Edinburgh,
Exeter, Glasgow, Hull, Leeds, Liverpool, London,
Manchester, Middlesbrough, Newcastle-on-Tyne,
Norwich, Nottingham, Oxford, Plymouth, St.
Andrews, Sheffield, Southampton, and several other
towns.

Information regarding the Examinations may be
obtained from the SECRETARY, L.L.A. Scheme, The
University, St. Andrews.

Joint Agency for Women Teachers

OAKLEY HOUSE,
14, 16, & 18 BLOOMSBURY ST., LONDON, W.C.1.
Under the management of a Committee appointed by
the Teachers' Guild, College of Preceptors, Head
Mistresses' Association, Association of Assistant
Mistresses, and Welsh County Schools Association.)

This Agency has been established for the purpose
of enabling Teachers to find work WITHOUT
UNNECESSARY COST. All fees have therefore
been calculated on the LOWEST BASIS to cover
the working expenses.

No Registration Fees are charged to Members of
the above Associations, and their commissions are
reduced.

Hours for Interviews—

11.30 a.m. to 1 p.m., and 3 to 5 p.m.

Saturdays, 11.30 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be
arranged.

Registrar—Miss ALICE M. FOUNTAIN.

The Association of University Women Teachers.

108 VICTORIA STREET (1st floor), S.W.1.
Recommends Teachers and Lecturers. Teachers
with University qualifications, requiring posts in
Public or Private Schools, are invited to apply to the
Secretary—Mrs. B. BROUGH. Subscription 5s. per
annum. Tel.: VIC. 2483.

FOR SALE; SCHOOL TRANSFERS; PARTNERSHIPS, &c.

See also pages 434, 484, 485, and 490.

LOUGHTON, ESSEX.—For Sale, in this lovely district, on the border and overlooking part of the forest, a very delightful HOUSE, within 10 minutes of the station, with a good train service to Fenchurch Street and Liverpool Street Stations.—A very fine Freehold House, with lovely grounds most artistically laid out: there are lovely views from the house in every direction. The grounds have been laid out regardless of expense, and include artificial lake, fountain, rock garden, ornamental ponds, and water-course, very fine conservatory, large range of greenhouses, concert room, miniature child's cottage with garden attached; the garden occupies about three acres, and the paddock about five acres, making about eight acres altogether. The house contains five large reception and fifteen bedrooms, including room for gardener. It would be an ideal place for an Institution or large country residence: telephone attached to the house. Possession can be given on completion of purchase. Price, freehold, £7,500. For further particulars and order to view, apply—GOLBY, Estate Office, Mill Hill, N.W.7. 'Phone, Finchley 1458.

TOTTERIDGE, HERTS.—For Sale, a most attractive HOUSE, standing in a lovely position, about 1½ miles from the station. The house contains fine entrance hall, two large receptions, and seven bed rooms. Good outbuildings, including garage, stable, fowl runs, wood store, lovely garden of about two acres, with abundance of all kinds of fruit trees, full-sized tennis court. Only a few minutes from golf links. There are also two cottages included in the sale. Possession can be given at the September quarter. Telephone attached to the house, which is within the London radius. The house can be viewed any day up to one o'clock, except Sunday. Price for the FREEHOLD, which includes house, buildings, about two acres of land, and two cottages, £6,000. For particulars and order to view, apply—GOLBY, Estate Office, Mill Hill, N.W.7. 'Phone, Finchley 1458.

TOTTERIDGE, HERTS.—For SALE, in this lovely district, fine HOUSE, standing on one of Nature's beauty spots, with glorious landscape views in every direction which can never be spoiled. Contains three fine reception, attractive hall, eight bed, one dressing, fine bath room, all on one floor; central heating for hall and landing, good domestic accommodation, two staircases, laundry, dairy, abundance of outbuildings, including two-stall stable, two loose boxes, cow pens for 12 cows, garage with pit large enough for two cars; gardener's seven-roomed cottage in splendid repair, two full-sized tennis courts, fine kitchen garden and paddock of five acres. Possession on completion of purchase. Freehold, £12,500. If desired the furniture will be sold with the house.—For illustrated booklets and orders to view, apply—GOLBY, Estate Office, Mill Hill, N.W.7. 'Phone, Finchley 1458.

ELSTREE VILLAGE. For Sale, a very desirable residence in this lovely district, standing in its own grounds about 1½ miles from Elstree Station. It would be an ideal place for an Institution or Convalescent Home. The house has a stately entrance hall, 3 large reception, 14 bed and dressing rooms, full-sized billiard room, telephone attached, lovely grounds, full-sized tennis court, paddock, fine kitchen garden, in all about 6 acres, abundance of fruit trees. Possession can be given on completion of purchase. Price £8,500, freehold. For further particulars and orders to view, apply—GOLBY, Estate Office, Mill Hill, N.W.7. 'Phone, Finchley 1458.

FOR SALE, on reasonable terms, by private treaty, a fine, well-built private residence, very suitable for a School or other Institution. Situate about 3 miles from Malvern, 2 miles from Upton-on-Severn, and 7 miles from Worcester, and containing 24 Bed and Dressing Rooms, Bath Room, 4 Reception Rooms, Servants' accommodation, and Domestic Offices, Private Chapel, Good Stabling, and covered Yard, Motor Garage, Greenhouse, 2 Cottages, and about 25 acres of land (more can be arranged for). Boat-house, with Landing Stage on the Banks of river Severn. Vacant possession on completion. Orders to view by appointment and other particulars can be obtained from CHARLES E. HAY, Estate Office, Hanley Castle, near Worcester.

UNIVERSITY of LONDON, KING'S COLLEGE

COURSES IN THEOLOGY FOR WOMEN.

WOMEN are prepared for the following examinations:—B.D. London, the Archbishop's Diploma in Theology (S.Th.), the University of London Certificate in Religious Knowledge. Day and evening classes are arranged. A special reduction in fees is made to teachers. The lectures are open to members of all denominations.

The staff includes the following:—
The Rev. W. R. Matthews, Dean Professor of Theology;

The Rt. Rev. Bishop Gore, Lecturer in Dogmatic Theology;

The Rev. Canon Box, Professor of Hebrew and Old Testament;

The Rev. Dr. White, Professor New Testament;

The Rev. C. Jenkins, Professor of Ecclesiastical History;

The Rev. C. F. Rogers, Professor of Liturgical Theology;

The Rev. Dr. Dearmer, Professor of Ecclesiastical Art;

The Rev. J. H. Manria Relton, Lecturer in Historical Theology.

For particulars as to fees and courses, application should be made to the Tutor for Women Theological Students, Miss E. W. HIPPLEY, S.Th., King's College, Strand, W.C.2. Next term begins on October 6th.

UNIVERSITY OF LONDON, UNIVERSITY COLLEGE.

Students who desire admission to full-time Undergraduate Courses, in October next, should apply for admission immediately. Those who have just sat for Matriculation can make their applications contingent on success in that examination. Owing to the large number of applications already received, it is unlikely that any application will be successful that is received later than Saturday, July 3rd.

WALTER W. SETON, M.A., D.Lit.,
University College, London. Secretary.
(Gower Street, W.C.1.)

NATIVE FRENCH MASTERS

AND MISTRESSES AND FULLY QUALIFIED French teachers of British nationality seeking appointments should apply to the National Society of French Masters (most reasonable terms), Sackville House, 7 Red Lion Square, W.C.1.

MRS. CURWEN'S PIANO.

FORTE METHOD.

ALSO EAR TRAINING AND SIGHT SINGING FROM SOL-FA AND STAFF.

TRAINING CLASSES for MUSIC TEACHERS, held on Wednesdays and Saturdays at the Wigmore Hall Studios, Wigmore Street, W.1, taught by Miss SCOTT GARDNER and Miss MARGARET KNAGGS, A.R.C.M. An interview may be had by appointment.

A FRENCH EXERCISE BOOK,

forming a companion volume to the above

Grammar. By F. VICTOR MASSARD. 2s. 6d.

LATIN.

CONTINUOUS LATIN PROSE.

By H. J. DAKERS, Assistant Master at Manchester Grammar School. 5s. 6d.

This book is intended for the use of Upper Forms of Schools and to provide for the writing of Continuous Latin Prose up to scholarship standard. The Exercises have been tested in Manchester Grammar School, where the book was in use for a time before publication.

A Latin Version, 6s. net, postage 2d.

JUNIOR LATIN PROSE.

By H. J. DAKERS. Crown 8vo. 4s.

The aim of this book is to make the transition from the drill of detached sentences to the translation of simple stories as speedily as possible. There are a limited number of exercises of Sentences to give practice in the more important rules of Syntax. It is suggested that the best way of using this is to work through them orally with the pupils. These are followed by 130 short pieces, historical or mythological for the most part, for translation into Continuous Latin. The exercises and the Pieces for translation are all freely supplied with references to the Syntax, which it is hoped may thus be absorbed in use. Many of them have already been practically tested in class teaching, and all of them were written in Latin before the English took its final shape.

A Latin Version, 6s. net, postage 2d.

LATIN ELEGIAC VERSE COMPOSITION.

By ROY MELDRUM, Assistant Master at St. Paul's School. 5s.

This book of 208 pieces puts into practice the use of Latin Repetition. The selection of Latin and English passages has one common theme, so that the pupil may have a chance of collecting his thoughts to treat one theme adequately, and of becoming familiar with one set of words at a time, instead of passing hastily and in confusion from one set to another.

ELEMENTARY LATIN ELEGIAC VERSE COMPOSITION.

By ROY MELDRUM. 2s. 6d.

Latin Version to each of the above:—Latin Elegiac Key, 6s., postage 2d.; Elementary Key, 5s., postage 2d.

LATIN PROSE COMPOSITION.

For the Middle Forms of Schools.

By M. A. NORTH and the Rev. A. E. HILLARD,

High Master of St. Paul's School. 4s.

A Key, 6s. net, postage 2d.

ELEMENTARY LATIN PROSE EXERCISES.

By the Rev. A. E. HILLARD and C. G. BOTTING, Assistant Master at St. Paul's School. 3s.

A Key, 3s. 6d., postage 2d.

ELEMENTARY LATIN TRANSLATION BOOK.

By the Rev. A. E. HILLARD and C. G. BOTTING. 2s. 9d.

This is a series of pieces specially written in which the authors try to keep the principle of their other books by not introducing at any stage any construction or form which has not already been learnt. The order in which constructions and forms are introduced is that of the authors' ELEMENTARY LATIN PROSE EXERCISES, and parallel references are given. The subject-matter drawn upon for the pieces is mainly Roman History, and almost from the start an attempt is made to give a "continuous" narrative in each piece instead of separate sentences.

BEGINNERS' GUIDE TO LATIN,

being a first Latin Translation Book.

By GEORGE G. LOANE, Assistant Master at St. Paul's School. 2s. 6d.

This attempts to provide a self-contained guide for the beginner of Latin. The accident is given in small portions, and the passages for translation contain only such forms as have been so far learnt. The easier idioms are explained from time to time, and are then used in the translation. The whole accident is thus covered and most of the elementary constructions come in.

EXERCISES IN LATIN PROSE.

With Notes and Vocabularies.

By E. D. MANSFIELD, M.A. 3s.

A Latin Version, 5s. 2d. net.

OCCASIONAL NOTES.

THE terms of reference of the Standing Joint Committee on the salaries of teachers in secondary schools are substantially those adopted by the "elementary" Burnham Committee; only the first of them calls for comment. The Committee sit to secure "the orderly and progressive solution of the salary problem in secondary schools, and its correlation with a solution of the salary problem in elementary, technical, &c., schools." Since no representatives of secondary-school teachers sat upon the "elementary" Burnham Committee, and as no technical teachers are taking part in the deliberations of the "secondary" committee, despite the fact that a third committee is to be set up in the late autumn to deal with technical and art teachers' salaries, it is difficult to understand how correlation can be effected. Technical teachers, however, are asking for scales practically identical with those advocated by their secondary-school colleagues, so that the third committee may well take into consideration the work of their predecessors. So far as the personnel of the present committee is concerned, the representatives of the Local Authorities Associations are the same as those on the "elementary" committee. On the teachers' panel the head masters, head mistresses, and assistant mistresses, and the National Union of Teachers have five representatives each, and the Assistant Masters' Association supplies the remaining six. For the Local Authorities Associations, Mr. F. J. Leslie, of the Association of Education Committees, is acting as secretary. The Assistant Masters' Association provides the secretary to the teachers' side of the committee in the person of its organizing secretary, Mr. G. D. Dunkerley.

ANOTHER of the terms of reference of the Committee is "that a scale (or scales) of salary shall be formulated by agreement by October 31, 1920, if possible." The delay in setting up the committee was most regrettable. All the teaching associations were ready in January, yet the first meeting did not take place until May 21. The delay was presumably unavoidable, but, as a result, the teachers' position financially has become almost desperate. Lord Burnham has ruled from the chair that "the establishment of this committee does not debar local education authorities from granting interim advances of salary to teachers if they desire to do so," and this has been acted upon by several authorities, and some measure of relief has been obtained in certain areas. Nothing less than a full "carry-over" scheme to the new scales will really meet the case, and the need is urgent. Rumour has it that a report may be made in July, and that, in this way, financial help may be obtained before the holidays. At the time of writing this seems quite impossible. The committee will have met only three times when this issue is published; scales must be accepted by the teachers, and a period of truce agreed to, before the scales can be put into operation; and the quality of service accepted for "carry over" will need to be determined. Indeed, the acceptability of any scales must depend to a large extent upon a definition of past service which shall be so wide and general as to include as much as may be of such service. This point is most important. In the case of primary-school teachers the issue is simple; in that of the men and women in secondary schools it is the reverse. Teachers will look for a generous interpretation by local authorities of any guidance afforded by the report of the committee.

ON May 15, a conference was held in London of representatives appointed by all the National Associations of Teachers to meet the members of the Teachers Registration Council and discuss with them certain points connected with the Council's work. The nature of the discussion is indicated in the two chief resolutions, which were carried with practical unanimity. The first of these was moved by Sir John McClure, a former president of the Head Masters' Association, and seconded by Mr. G. H. Powell, the Vice-President of the National Union of Teachers. The resolution affirms that the divisions which now exist among teachers through the variety of institutions in which they serve, and of subjects which they teach, should not be emphasized to the extent of preventing united action for the benefit of education and of the profession as a whole. Sir John McClure urged that the time has come when a bridge must be constructed providing for the easy transfer of qualified teachers from one branch of teaching work to another. Such a bridge must allow of traffic in both directions, so that it may be possible for teachers to proceed from secondary schools to elementary schools, and *vice versa*, and so that it may not be held derogatory for the university teacher to take up work in some other branch. There is evidence on every side that the barriers between different forms of teaching are being rapidly broken down, and this may be ascribed to the existence of the Registration Council, with its comprehensive Register "arranged in one column with the names in alphabetical order." The Register itself is a symbol of the unity which is coming into being.

THE second of the resolutions passed at the conference was moved by Miss J. F. Wood, President of the National Union of Teachers, and seconded by Mr.

Teachers and Control.

M. J. Rendall, Head Master of Winchester. It ran thus: "In order that education, both for children and for adults, may be brought to the highest level of efficiency, and be adjusted to the various and changing needs of the community, the conference desires legislation which will ensure that teachers shall be taken into consultation by both central and local authorities on all important questions, administrative and other, affecting education." A majority of those present were in favour of seeking to obtain for teachers a statutory right to be consulted on matters concerning their work. One speaker pointed out that they were seeking to have their right to consultation established, and were not content merely to ask for a favour. The growth of the Whitley Council movement in industry has been watched with much interest by teachers, and, although it may be that the Whitley scheme is not fully applicable to our educational system, few teachers will doubt that education would benefit greatly if we had a properly established scheme whereby the experience of teachers could be used in administration. To secure this as a right, it is necessary that we should have a united teaching profession, and this aim can be realized when teachers themselves recognize the importance of arriving at a complete understanding among themselves. The conference may be regarded as a preliminary step in this direction. We understand that it is to be followed by other conferences, and we hope that a satisfactory and practicable scheme may be devised for making the Teachers Registration Council the central body representing and carrying out the views of the various sections who appoint its members.

THE resolutions asking for greater freedom in the choice of subjects in the First Examination, and for the alteration of the conditions on which financial aid

Freedom in Choice of School Subjects.

is given to "post-matriculation" work in our schools, which were passed with but one dissident at the largely attended annual Conference of Head Mistresses on June 12, mark a distinct stage in the history of girls' education in this country. Both seek to vindicate the principle that the true aim of education should be to discover the tastes and develop the capacity of the individual pupil, and that this necessitates the adaptation of the system to the individual, rather than that of the individual to the system. While admitting that up to the stage of the First Examination the curriculum should be, in the main, the same for all, the head mistresses hold that aesthetics, with its stimulating and humanizing influence, should be given a more honourable place in that examination. The many thousands of boys and girls who leave our schools at this stage would thereby gain greater opportunity of forming tastes which would be of incalculable value to them in later life by leading them to use their leisure for worthy ends. The plan of the Board of Education to encourage higher and more specialized work in schools by giving grants for advanced courses in classics, science, and modern studies, has been found often to interfere with the grouping of subjects most suitable for individual cases by requiring that two-thirds of school time shall be given in each course to three main subjects prescribed by the Board, without reference to

the special tastes or capacities of the pupil. As music and art are not recognized as main subjects in any course, they cannot be seriously pursued except at the risk of over-work. This and other grave drawbacks lead the head mistresses to urge that the responsibility for arranging the plan of study suitable to individual pupils should be left to those who come into direct contact with them, subject always to the Board's approval of the course pursued.

THE question of separate universities for women was not raised at the recent Conference of Head Mistresses in London; but there can be no doubt that the

Separate Universities for Women.

Association disapproves the plan. There has never been any demand for such a place from women themselves; their demand has been for a share in the spiritual inheritance of learning conveyed and stored in the universities already existing, and continually renewed and increased by the labours of scholars and men of science. There is only one commonwealth of learning, and of it women seek to be full citizens. The variety and freedom of the university courses of study gives them what they individually need, and the separate hostel system in residential colleges gives them their own social life. Some head mistresses prefer the fuller coeducational system of the urban universities, as at University College, London, or in Birmingham and Manchester. Others prefer the life at Oxford and Cambridge, or at Westfield, Holloway, and Bedford Colleges. But no one wants an English Vassar, or even a Bryn Mawr. The problem of the secondary-school girl is quite different; the most ardent advocate of the separate school and the special curriculum for growing girls never asks for a separate university for the grown woman. There are real disadvantages even in the segregated technical college for training, and many head mistresses would wish to see these related more closely to a university. But there is an even more effective difficulty: women could not make a separate university. There are few outstanding women students, and many of the best of these are claimed by marriage and family life. Their power and work are often merged in that of their husbands or other relatives, and rightly so. If women have something of their own to give to the commonwealth of learning, they wish to add it to the general stock, not to develop it in isolation from men.

ON June 4, a meeting, consisting chiefly of past and present students, was held in London in support of the claim of the Imperial College of Science and

The Imperial College of Science and Technology.

Technology for power to confer degrees, and for university status. Judging from the speeches, and from the terms of the resolution adopted, the claim is based on the plea that it is a grave hindrance, as regards their future prospects, alike to oversea students and to students of the United Kingdom at the Imperial College, that they cannot obtain their own degree. It was maintained by most of the speakers that no kind of degree granted by London University will meet the demand now made, which is not for any form of London University degree, but for an Imperial College (or Imperial Technological University) degree, and that alone. The Imperial College already grants diplomas, but these, it is said, have not the market value of a degree. But the

idea of a university with faculties in science and technology only is new in this country, and it is not surprising to find much opposition to the proposal. As Mr. H. G. Wells, in supporting the claim of the college, pointed out, there is a widespread fear that the Imperial College culture may not be an all-round, broad-minded culture, and that, apart from technological acquirements, the students may become narrow-minded men. The college authorities would do well to address themselves to this aspect of the problem, and to indicate how, and to what extent if any, they propose to supplement the specialized instruction of their college, which has gained so deservedly high a reputation.

Other Considerations. THE claim of the Imperial College for degree-conferring power and university status is naturally resented by many supporters of the University of London and of its constituent colleges. It is suggested that the great medical schools of London, the London School of Economics, and the School of Oriental Studies might, with equal justice, claim similar powers; and the great body of past and present students of University College and of King's College could, it is maintained, make out convincing cases for their recognition as separate universities. It is one of the arguments of the Imperial College authorities that the population of London justifies the existence of more than one metropolitan university. Educationists are chiefly concerned to secure an adequate provision of higher education in London, which will meet the needs of every section of the community, provide suitable training for all branches of human activity, and attract students from all parts of the Empire. Every development in these directions in whatever faculty is to be encouraged, and it may be hoped that energy will be expended primarily on the improvement of higher education in London, and that none will be dissipated in urging individual claims to preferential treatment.

Supply of Teachers. THE issue by the Board of Education of Circular 1160 and List 170 furnishes the occasion, which we think it important to seize, of returning to the question of the supply of teachers. The Board calculate that an entry of 9,000 candidates yearly is required to meet normal wastage, but that the objects of the recent Education Act cannot be secured unless 6,000 additional candidates, making 15,000 in all, can be obtained annually during the next 15 years. The disquieting facts are that the total for all England in 1918-19 was only 5,274, of whom only 665 were boys! To put the matter otherwise, the number of candidates ought to be about 10 per cent. of the number of teachers to be employed, whereas in the counties (excluding London) the percentage in 1918-19 was 4.6; in the county boroughs, 3.3; and in London less than 2. Well may the Board say that the position with which they and the local education authorities are faced is very critical. "The present standard of efficiency in the public system of education is seriously threatened. The future to which the Education Act of 1918 looked forward is in grave peril." These are the words, not of a platform orator, but of a sober official document. The Board appeal to all local authorities to contribute to the utmost of their power to the solution of the problem of recruitment of teachers, "which is for the moment the most urgent and vital of all."

AS to the causes of the deficiency, we think the Director of Education for Liverpool is probably right when he places first and foremost the long and arduous apprenticeship—four years in a secondary school up to the seventeenth year of age, one year as student-teacher, and at least two years in a training college—so that the earliest age at which a young person can enter on the lowest rung of the scale of salaries for certificated teachers is twenty-one. The only way out of this difficulty that we can see is more liberal financial help, especially during the training college period, and this opinion is confirmed by the manner in which ex-service men, receiving special maintenance grants, have recently come forward as candidates for training. In this connexion, we must express our regret that the Southgate and District Teachers' Association (N.U.T.) should, in their recent letter to the *Schoolmaster*, have belittled and derided point by point everything that can be said in favour of teaching as a profession—improving salaries, short hours and long holidays (though we are sorry to see these items in the list of presumed attractions, because they ought to be largely illusory), security of tenure, adequate pensions, and all. It is all very well to compare a teacher's income with a dustman's, but it is plain that a great social change is proceeding, whereby unattractive work will have to be comparatively well paid, simply because it is unattractive. What professional man would change places with a dustman or a coal-miner, though the latter may be nearly as well paid as he?

Hostels for Teachers. THE Bradford Education Committee have been petitioned by their secondary-school teachers, who are experiencing difficulty in obtaining accommodation, to build a hostel for them. If the Committee agree to the proposal, and conditions in Bradford may render this imperative, it is to be hoped that such hostels may not be established generally. Teachers would, no doubt, be under compulsion to live in the hostel, which must be kept full, or run at a loss. That such an arrangement would suit the present staffs is proved by their petition; but teachers in the future, knowing nothing of housing scarcity, might well resent such compulsion, and, if they did, would only show their wisdom. The teacher is the last person to be insulated. His professional life is unreal; the atmosphere of the classroom artificial; the long hours of intercourse with immature minds deadening. To counteract this, the teacher, more than most, needs contact with all sorts and conditions of men. His work being, in many aspects, cramping, it would be deplorable if the conditions of his home life were narrowing too, and this they surely would be were he housed exclusively with persons exhausted at the same time and in the same way as himself—persons, moreover, with whom he had already spent his working day in the rarefied air of the school-house. Hostels for teachers might easily become new monasteries and nunneries, to the detriment of the teachers' personality and with peril to the most valuable part of their work.

Employers and Education. WHEN the employer becomes an educational pioneer he is liable to be misunderstood. It is often assumed, quite wrongly, that his interest is confined to "works schools," and even to that restricted type of works school—namely, the day continuation school—held in

connexion with a place of employment. The fallacy of the prevalent view was shown by the enthusiastic reception given by the Association for the Advancement of Education in Industry and Commerce to three addresses on "Adult Education." The meeting was a part of the recent conference referred to in another column, and it is noteworthy that the principal speakers included the founder of the Workers' Educational Association and the chairman of the Central Education Committee of the Co-operative Union. Even as regards continuation schools, those firms which have already launched schemes—some of them long before the 1918 Act—have adopted a variety of policies. Several have established schools entirely under their own control (with the necessary measure of inspection), but others have called in the local authority and entrusted that body with the administrative and educational control. In an intermediate type of school the responsibility—financial and otherwise—is so shared that it would be difficult to say who actually runs the school, but perhaps this scarcely matters, so long as the curriculum is sound and the students get the best education available. While continuation schools of all three types are being started at the present time, it is quite likely that the most marked increase in numbers will take place among the third class, *i.e.* those managed by the intimate co-operation of education authority and employer.

THE Middlesex Education Committee give proof of a real desire to understand the needs and views of teachers in their resolutions to establish Advisory Committees for Higher and Elementary Education, formed of members of the Education Committee and teachers in equal numbers, the teachers' representatives to be chosen by their associations.

**Middlesex Advisory
Committees
and Direct
Representation.**

Such joint committees are framed on the model of an industrial Whitley committee, and should afford a useful means of communication between the teachers and the education committee of the county. But why not go a step further, and place representatives of the teachers on the education committee itself? The committee have the power to co-opt such representatives, and the full knowledge that would be gained by their presence on the committee would save valuable time and tend strongly to increase efficiency and harmony. There is much to be said in favour of the opinion, now held by teachers generally, that they should have the statutory right to place on the education committee representatives chosen by university, technical, secondary, and primary teachers of the education area. Executive power rests with the local authority itself, so that there would be no infringement of the principle that no one employed by an authority should have a seat on that authority.

THE County Council employ labour, and finance the business of maintaining and making roads, and in several areas the renovation and decoration of school buildings is also undertaken by skilled workmen on the staff of the authority. In at least one County Borough the Education Committee have set up complete machinery for printing and binding, and supply all their schools with exercise books and other requisites of their own manufacture. There seems to be no substantial reason why authorities should not do these things if it can be con-

**Municipal
Trading.**

clusively proved that such enterprises are economical. The title of the municipality to control, and manage, larger services required by the community is unquestioned, and although, other things being equal, we should prefer the production of school requisites to be a matter of private rather than public initiative, it is the business of private firms to prove this title to preference. These reflections are suggested by what appears to have been a not very well informed agitation against the Stores Department of the Kent Education Committee. The Committee are accused of the desire to rob the Kentish tradesman of his modest profits. It is very unusual for an authority to purchase school requisites from local tradesmen, and their contracts are placed, as a rule, with large firms who specialize in the supply of the innumerable aids to efficiency required by teachers. This, so far as we can understand the merits of the controversy, is what the Kent Education Committee are proposing to do, their aim being to provide selected apparatus and material of the highest educational value at the lowest possible price, and incidentally to give rate-payers relief by the elimination of the profits hitherto made by middlemen and others. There seems to be no reason why this proposal should not be favoured by all the good citizens of Kent.

ROUTINE MASTERS AND THE SYSTEM OF ROUTINESHIP IN SECONDARY SCHOOLS.

By RANDALL WILLIAMS.

WE are fortunate in living in an age which recognizes that experiment is the *primum mobile* of true education. The valuable and interesting experiments which are brought to our notice from time to time have, as a rule, one common goal—the self-development of the pupil. It is, of course, true that these experiments have a resultant on the staff as well: the teacher and the taught benefit by any measure which aims primarily at extending the sphere of the pupil's rational self-expression.

The experiment which forms the subject-matter of this article concerns primarily the staff of a secondary school. The system of routine masters which it describes operates in the County School, Tottenham, where it was actualized a few years ago through the initiative and foresight of the head master. The rapid growth of the school, together with the head master's wish to afford certain members of the staff facilities for obtaining first-hand knowledge and experience of the internal government of a secondary school, resulted in the inauguration of a scheme which involves a much greater delegation of authority than that which obtains through the traditional appointment of a second or a senior master alone.

It must not be assumed that these two systems are mutually exclusive. There are obvious reasons why a school should have a senior master. In a school where the two systems are found, the senior master would deputize for the head master in the absence of the latter; he would also be chairman of any meetings of routine masters *inter se*, and would necessarily act as routine master in rotation. Routineship should not be made in any way prejudicial to his interests. He will act as routine master, but he will maintain the rights and privileges of his special position in the school.

There are, however, equally cogent reasons for a wider delegation of authority. On the staff of most secondary schools there are well qualified specialists who, finding in scholarship an adequate source of inspiration and satisfaction, are not at all anxious to occupy a position in which they would have to devote some of their time and energies to the work of organizing a school, in addition to the usual class-

room work. But there are others who, while giving much time to the acquisition of scholarship, cherish the hope that they will become eventually head masters or educational organizers. These men need something in addition to academic experience in a classroom. They require greater scope for exercising their innate powers of administration and organization. None is more acutely conscious of this need than they themselves, especially when they are applicants for a post which presupposes a practical knowledge of school routine. What details can the average assistant master supply to the following statement which often appears on the form of application for a head mastership?

"The candidate should here furnish any details calculated to enable a judgment to be formed of his fitness for the post."

This does not mean, "How many pupils have you taught successfully for matriculation or some higher examination?" but it means, among other things, "What practical experience have you already had of showing your individual initiative and powers of organization in the wider and more general aspect of school routine?"

It must be acknowledged that the ordinary assistant master is thus seriously handicapped in competing for a head mastership. Routineship offers a solution to this difficulty. Its keynote is decentralization of administration, and one of its salient features is that it removes the odium of autocracy. It prevents a school from becoming "a one man show" in that each routine master, as will be explained later, is afforded opportunities for the acquisition of valuable experience in testing his own initiative, and for suggesting schemes which he thinks may promote the efficiency of the school.

A brief exposition of the *modus operandi* is desirable. Let us consider (a) the nature of the work, (b) the choice of men, (c) the period during which a routine master should be in office.

It is impossible to furnish an exhaustive list of the various duties for which a routine master should be responsible; such duties depend on the type of organization which is found in the school concerned. However, the following are suggested as being essential in most schools. At a convenient time prior to his taking office, the routine master will allocate to the staff and prefects the various duties of the school in question; every school has certain specific duties which must be executed in order to ensure administrative efficiency. Lists of these duties, and of those responsible for their execution week by week, will be placed for purposes of reference in the head master's room, the staff common room, and in the prefects' room. The routine master must be prepared to supervise personally the way in which these duties are discharged. Until the head master arrives, the routine master will take charge of the school hall at all times of general assembly. Ordinary matters of school discipline will be referred to him, and he will attend any meetings of prefects convened to deal with any special cases which require a somewhat detailed discussion. The minutes of these meetings will be kept, and submitted periodically to the head master. During the absence of the head master and of the senior master, the routine master will be in charge of the school, and will interview any parents and visitors. (In co-educational schools this is liable to modification.) At the expiration of his period of office, the routine master will submit his report to the head master, and will indicate any matter requiring attention. The subject-matter of such a report will be *things*, and not *persons*. Let it be clearly understood that routineship is not a euphemism for a system of spying or of secret service. Reference will be made in the report to any weaknesses in the general organization, and, simultaneously, the line of possible improvement will be suggested. Any new ideas from the routine master should also be incorporated therein.

Inasmuch as this report will embody the results of the practical observation of the government of the school during a sufficiently extensive period, it will be particularly useful to the head master. Its subject-matter may necessitate a conference of the head master and of all the routine masters. Even if the report does not direct attention to any point of special urgency, the head master may find it expedient and helpful to convene

occasional meetings of routine masters. He may, too, submit questions for their consideration in his absence, in which case the senior master will occupy the chair, as has already been stated. Whatever the procedure may be, it is obvious that routine masters constitute a small committee of the staff capable of doing much useful legislative and administrative work. Questions can be discussed freely and solved expeditiously by such a small body of experienced men. A definite policy can be decided upon conjointly with the head master and will be submitted subsequently to the whole staff for execution. There will thus be a saving of time, general staff meetings will be few and short, and the policy laid down will not be the product of one mind, but will be the result of the deliberations of a few men experienced in the ordinary matters of school organization.

If it is successfully carried out, this system of routineship should benefit, first of all, the routine masters, inasmuch as they obtain thereby an insight into the work of a head master without the onus of final responsibility; secondly, the school, as a whole, in that the policy adopted embodies the work and vision of several minds working intensively and in concert; thirdly, the head master himself, who has thereby his own perspective enriched by the enthusiasm and initiative of men who are willing to assume responsibility.

It may be argued that the system makes somewhat heavy demands on the routine master during his teaching and marking periods. Where such a system is in operation, however, provision to meet this difficulty should be made by the head master when he draws up his time-table. A second objection may be raised: the routine master is not paid for such work. With regard to payment, it may be noted that many education authorities make provision for the remuneration of assistants who occupy posts of special responsibility. Routine masters do certainly fulfil this condition, and special remuneration is both justifiable and desirable.

The *sine qua non* of success of this scheme is the choice of suitable men as routine masters, since the scheme demands so much personal supervision, initiative, and tact. In a school of three hundred pupils, the head master ought to be able to find three or four men—probably, but not necessarily, among the so-called "house masters"—who will be willing to participate in a scheme which will be advantageous to them, to the whole school, and to the head master.

As regards the length of time during which the routine master should be in office, a month will be found to be the most suitable period. A week is too short, and a term is too long.

Routineship should foster a tactful manner in dealing with colleagues, self-confidence, self-reliance, a measured judgment and a willingness to resume responsibility.

There must necessarily remain a province in which the head master alone operates, but the routine masters, in the discharge of their duties and by means of their periodical conferences with the head master, obtain a real insight into the aims, organization, and administration of a large school.

In small schools, the work can be done effectively without such a system of delegation of administration; but routineship is strongly to be advocated in large schools where an extensive distribution of duties is inevitable. It is a system which should operate equally successfully in boys' schools, in girls' schools, and in co-educational schools.

MESSRS. CHARLES GRIFFIN & CO., LTD.—This well known publishing house celebrates its centenary this year. A hundred years ago the business was started in Glasgow by Mr. R. Griffin, but in the early forties of the last century it was moved to London, and from that date its history has been one of steady progress and growing importance. To-day the name of the firm is chiefly associated with the publication of standard works on applied science and technology, a line of development which was initiated, and has been consistently encouraged, by the present managing director, Mr. Francis J. Blight.

HEAD MISTRESSES IN CONFERENCE, 1920.

By EDITH M. BANCROFT, Chelmsford High School.

THE forty-sixth annual conference of the Association of Head Mistresses was held, on June 11 and 12, at the Streatham Hill High School, under the presidency of Miss Major, of King Edward's High School, Birmingham. Its opening words were those of warm and pleasant welcome to the assembled members from our hostess, Miss Oldham, who herself occupied the presidential chair last year at Birmingham, and in 1918 at the North London Collegiate School. The size of the audience, the quick and genuine interest with which the discussion was followed, the readiness to contribute to debate—all were signs of good omen. It is characteristic of the work of education that it rarely fails to inspire, in the minds of those engaged in its heavier labours, a readiness to meet the complexities of changing conditions with exhilaration and not dismay, and an ardour which shrinks from no mental fight in attempting to solve the problems which those changed conditions must bring.

The reports of the nine sub-committees appointed to deal with special departments of the work of the Association and those of its representatives on various educational councils, which were briefly taken, were indications of the energy with which educational problems have been handled throughout the year.

One of the most successful discussions was that on the important question of "homework," which was introduced by Miss Frood (of the Dudley High School) and Miss Fletcher (of the Bath High School). Many speakers joined in the debate, each with suggestions drawn from observation and experiment, and the discussion teemed with interest and practical utility. The evils too often attendant upon homework, set forth with succinct and convincing clearness by Miss Frood, were admitted by most of the speakers, but general opinion pointed to the conclusion that these evils arose not so much from a wrong principle as from its faulty application. All speakers agreed that the value of homework, rightly understood, consisted in its opportunity for the expression of the individual away from environment and class spirit, not in the manufacture of a daily tale of bricks. Conceived thus, if guarded from abuse, it should normally be done with willingness under the impulse of desire, not under the constraint of compulsion. Remedial suggestions were many and varied. Miss Frood emphasized the desirability of preparation hours in school, of less formal teaching in the class, and of co-operation between home and school. Miss Fletcher urged that the time and the kind of work should be carefully graded for individuals in the same class, that attention should be concentrated on one or, at most, two subjects per night, and that work given to younger girls should be concrete and creative in type.

Discussion on the importance of a knowledge of voice production and phonetics in the equipment of the teacher was introduced by Miss Gray, who delighted her audience by her combination of wise saws and witty instances. Miss Gray attributed defects of speech to one fundamental cause—mouth-breathing and failure to use the lips. She condemned the use of phonetics as laborious and artificial, straining after an undesirable uniformity of pronunciation, and producing a lifeless, mechanical utterance. Other speakers emphasized the need of training, the value of oral drill in connexion with musical sounds, and deprecated the use of written symbols.

The last item of the first day's session was an address by the President of the Board of Education. In greeting Mr. Fisher on behalf of the Conference, Miss Major referred to him as one to whom it had been given to translate high ideals into great realities. Her words were confirmed by the welcome which he received on rising to speak. It was a warm and spontaneous tribute from teachers of responsible position to a Minister whose enlightened policy has inaugurated a new and great era of educational reform. On the theme chosen for his address, Mr. Fisher spoke with deep conviction and feel-

ing, arousing a quickened sense of responsibility in the minds of those who heard him. After defining the three main objects for which the League had been created—the placing of obstacles in the way of war, the association for study of international problems, the execution of mandates—Mr. Fisher gave a most interesting account of the proceedings of a meeting of the Council entrusted already with a consideration of such problems as the mandate for Armenia, the constitution of the free city of Danzig, the relation of the League to the Turkish Treaty, and the question of Siberian prisoners. He uttered his faith that the League, intertwined as it is with the Peace Treaty itself, was destined to be no League of Dreams, but to play an important part in the international machinery of the world. Since, however, in itself it was a thing of spirit, and not machinery, the condition of its success must be the cultivation in our schools of a broad and humane outlook on life, and of a wide and hospitable spirit trained by an enlightened study of history to realize the part which other countries have played in the past story of civilization. Thus should we build up the spirit of a nation which does not lightly go into war nor lightly tolerate inordinate ambitions of others.

Resolutions of the highest importance received detailed consideration on the second day of conference. The first contained a proposal to extend the membership of the Association beyond the circle of head mistresses of public secondary schools to those of continuation schools established or controlled by local education authorities. The general feeling of the Conference was undoubtedly one of strong sympathy with the spirit of the resolution; to its principle no opposition was raised. Some, however, saw wisdom in delaying action which might seem premature until experience had brought greater knowledge of the conditions of continuation-school work. A large body of members were urgent in their desire to extend the hand of fellowship without delay in these earlier and critical days of this pioneer work. The number, however, fell below three-quarters of the total number, the majority required in the case of constitutional change. Action, therefore, was postponed for a time.

Two resolutions of vital importance arose out of the report of the Education Sub-Committee, and were proposed by its chairman, Miss Oldham, and seconded by Miss Brock (Mary Datchelor School). These resolutions, the text of which is appended below, urged modification in the State Regulations for the first school examination, and for advanced courses. Miss Oldham, while acknowledging the progressive policy of the Board of Education in relation to examinations, pleaded for a greater freedom of choice for the individual. The present regulations, by weighting the scales in the case of certain subjects, ignored the difference of individual tastes and abilities, a difference not to be regretted, but to be encouraged. The inferior place given to music and art was a thing indeed to be deplored, seeing that a gift most sorely and widely needed in the world to-day is the gift of beauty, which makes life gentle and humane. She pleaded for recognition of the fact that the characteristic genius of our race has lain in the power of adapting system to individual cases. Miss Oldham was supported by an able and persuasive speech from Miss Brock, who showed that the study of music and of art, when worthily planned, far from being soft options or mere accomplishments, became gateways to intellectual development. Miss Lowe pleaded for freedom within the circle of the school—a circle already bounded by sufficient limitations of its own. These two resolutions, which received a practically unanimous support, were followed by a series of resolutions, also appended below, consisting of practical applications of the principles just asserted. This series arose out of the Examination Sub-Committee report, and were proposed by its chairman, Miss Gwatkin, and seconded by Miss Brock.

A short discussion was devoted to the question of the financial situation of non-maintained secondary schools, and, once again, the Conference gave an almost unanimous support to resolutions printed below, urging that, while retaining their present distinctive character, such schools should be adequately aided by the local authorities.

The limits of space compel me to pass over with a brief mention other interesting portions of our Conference—Dr. Mary Bell's lucid exposition of the light cast on problems of education by the knowledge of mental states obtained through the investigation of psychical analysis, and the interesting discussion upon "Democracy and Education" introduced by Miss Faithful, of Cheltenham Ladies' College.

The Conference closed with a reception kindly given by the Chairman of the London County Council at the beautiful building of the Furzedown Training College, where a charming programme of eurhythmic movements, of dance, song, and of drill, was given by classes of college students and of pupils from elementary and secondary schools.

RESOLUTIONS.

State Action with regard to Education.

The Association of Head Mistresses have always maintained the principle that the true function of education is to discover the tastes and develop the capacity and character of the individual pupil. The Conference therefore urges upon the Board of Education:—

(a) That, in order to secure a considerable measure of liberty at a stage which is the time of decision for most girls and the end of school life for many, there should be greater freedom in the choice of subjects in the First Examination. The head mistresses recognize the unique importance of English in the educational system of this country and desire that *Group I should be obligatory for all candidates*; they consider, however, that *the remaining four subjects of the five necessary for a pass should be chosen freely*, provided that at least two of the remaining three groups are represented.

(b) That, in order to secure complete liberty during the last two years of school life, when corporate activities and responsibilities play so large a part, and it is of paramount importance to adapt the course of study to the tastes and capacities of individuals, the restrictions imposed by the conditions on which the Advanced Course grants are made should be removed and head mistresses should be entrusted with the duty of arranging, subject to the approval of the Board of Education, the work of the sixth forms.

Resolutions arising out of the Examinations Sub-Committee's Report—

(a) That for a pass in a group in the First School Examination a pass in one subject should be sufficient.

(b) That in all examinations qualifying for entrance to a university, or to any faculty in a university, wherever Latin is declared compulsory, the words "or Greek" should be inserted.

(c) That every university should be asked to accept for entrance not only, as at present, a certificate awarded on the First School Examination of any examining body recognized by the Board of Education, which satisfies certain conditions with regard to compulsory subjects, or credit in a required number of subjects; but also any certificate awarded on the First Examination, without conditions, provided that it is supplemented by any certificate awarded on the Second or Higher Examination.

(d) That in all Second School Examinations recognized by the Board of Education it should be possible to take music either as a main subject or as a subsidiary subject.

(e) That in all Second School Examinations recognized by the Board of Education it should be possible to take art as a main subject or as a subsidiary subject.

(f) That examinations in English, especially the Higher Examinations, should be so modified as to allow far more scope for thoughtful answers, and that in order to ensure this: (i) there should be more definite insistence on the quality rather than on the quantity of the work; (ii) in at least one paper, candidates should be allowed to use unannotated textbooks in the examination room for purposes of reference.

That the Conference be invited to express recognition of the value in the national system of education of the work done in non-maintained secondary schools, and to instruct the Executive Committee to prepare a statement on the subject to be forwarded to the Board of Education, to be supported, if thought desirable, by a deputation.

That the Conference be asked to affirm the following resolution, carried by the Conference in 1915, viz.:—"That this Conference, being convinced that the sound education of children under ten years of age is of vital importance to their further progress, regrets that many children attending neither public elementary nor secondary schools receive no efficient education in early years; and recommends that preparatory departments be attached to secondary schools wherever this is possible, and that pupils in

such preparatory departments be eligible for grants from the Board of Education."

That Local Education Authorities in their reconstruction schemes should assign adequate financial aid to such non-maintained secondary schools in their area as require it, without seeking to alter their distinctive character.

PERSONAL PARAGRAPHS.

EDUCATION is represented in the "Prime Minister's List" of honours on the occasion of the King's Birthday by—

H. T. Barrie, M.P., D.L., Vice-President, Irish Department of Agriculture, who becomes an Irish Privy Councillor.

C.B.: Mr. H. M. Richards, Chief Inspector of Elementary Schools, Board of Education.

Knights: Dr. H. P. Allen, Director of the Royal College of Music; Mr. W. B. M. Bird, founder of the Salter's Institute of Industrial Chemistry for providing scholarships for post-graduate chemical research; Dr. J. B. Henderson, Professor of Applied Mechanics, Royal Naval College, Greenwich.

Imperial Service Order: Mr. R. B. Newton, assistant, Department of Geology, British Museum; Dr. W. E. Clark, Keeper of Natural History Department, Royal Scottish Museum, Scottish Education Department; Mr. R. Duncan, Staff Officer, Veterinary Branch, Department of Agriculture and Technical Instruction, Ireland.

THE appointment of Dr. Henson, Bishop of Hereford, to the see of Durham, vacated by the death of Dr. Moule, will not come as a surprise, for he already possesses an intimate knowledge of the county, obtained when he was Dean of Durham, from 1912 to 1918. During this period he interested himself keenly in social and Labour matters, and gained the high esteem of the miners of the county. Prior to going to Durham he was a leading figure in London for many years as a Canon of Westminster Abbey and Rector of St. Margaret's. Dr. Henson has contributed extensively to ecclesiastical literature, and his works have deeply influenced contemporary theological thought.

THE RIGHT REV. MARTIN LINTON SMITH, D.D., Bishop Suffragan of Warrington, who succeeds Dr. Henson as Bishop of Hereford, won the D.S.O. while serving as a Chaplain to the Forces during the war. He was ordained in 1893, and held curacies at Whitechapel, Aston, and Southwold, before he was presented to the living of St. Nicholas, Colchester, in 1902. In the following year he went to Liverpool as vicar of St. Saviour's, and in 1906 became vicar of St. Nicholas, Blundellsands. In 1917 he was appointed Rector of Winwick, Warrington, and was consecrated bishop when Warrington was added to the list of towns available as sees for Suffragans.

COLONEL H. G. LYONS, F.R.S., who has been appointed Director and Secretary to the Science Museum, in succession to Sir Francis Ogilvie, C.B., now transferred to the Department of Scientific and Industrial Research, is an old Royal Engineer officer. He was Director-General of the Egyptian Geological Survey for two years, and of the Egyptian Survey Department from 1898 till 1909. During the war he served as Commandant of the Army Meteorological Service and as Director of the Meteorological Office when the services of Sir Napier Shaw were requisitioned by the Government as scientific adviser in meteorology.

THE enthronement of Dr. Edwards, Bishop of St. Asaph, as Archbishop of Wales is an event of great historical interest. There has been no recognized Archbishop of Wales for fifteen centuries, and now the four Welsh dioceses are detached from Canterbury and constitute an ecclesiastical province of Wales, enjoying absolute independence. Dr. Edwards has been a prominent figure in Welsh public life

and a champion of the Anglican Church for many years, and his preferment has been warmly welcomed by the Non-conformist denominations in the Principality.

* * *

ON the advice of the Minister of Education, the King has made the following appointments—for the next six years—to the Consultative Committee of the Board of Education:—Mr. P. W. H. Abbott, Mr. J. G. Adami, Mr. S. O. Andrew, Mr. E. Barker, Miss E. R. Conway, Rev. D. H. S. Cranage, Lord Gorell, Mr. I. H. Gwynne, Sir W. H. Hadow, Miss F. Hawtrey, Mr. P. R. Jackson, Sir S. M. Leathes, Mr. A. J. Mundella, Miss B. S. Philpotts, Mr. R. H. Pickard, Mr. F. Roscoe, Mr. R. P. Scott, Miss E. M. Tanner, Mr. R. H. Tawney, Mr. W. W. Vaughan, and Mr. J. A. White. The Committee was established in 1907, but its sittings were suspended during the war, and the former members have vacated their office either by effluxion of time or otherwise.

* * *

THE Council of St. George's School for Girls have appointed Miss Ruth W. Freer, Honour School of Modern History (University of Oxford), Diploma in Pedagogy (University of London), as head mistress in succession to Miss Elizabeth Stevenson, who has resigned to take up an inspectorship under the London County Council. Miss Freer will enter upon her duties at the beginning of the winter session.

* * *

MISS M. W. MATTHEW, senior classical and English mistress at Worthing High School, and formerly second mistress at Stamford High School, has been appointed head mistress of Castletown High School, Isle of Man, in succession to Miss Hall.

* * *

MISS E. M. TALBOT has been appointed principal of Cherwell Hall Secondary Training College for Women, Oxford. Since 1919, Miss Talbot, who took the Final Honours School of Natural Science, Oxford, Class I, and the Oxford Diploma in Theory and Practice of Education with distinction, has been tutor to the women students under the Delegacy for the Training of Teachers in the University of Oxford.

* * *

VISCOUNT BURNHAM has rendered valuable services in helping to solve the problems of the resettlement of demobilized officers and soldiers and as Chairman of the Standing Joint Committee on Salaries. Scholastic circles will warmly appreciate the happy compliment paid to him by the members of the "Burnham Committee"—so called—in presenting to him the robes of Doctor of Laws at Cambridge University, the honorary degree conferred on him on June 15.

* * *

DR. W. LUDFORD FREEMAN, director of education, Stoke-on-Trent, who has been appointed director of education for Bristol, has rendered valuable service to education in many capacities. He received his early education in Bristol, and was trained at Cheltenham Training College. He graduated M.A., with honours in natural science, from St. Edmund's Hall, Oxford, and M.A., LL.D. at Trinity College, Dublin. After some three years as an assistant master in North London, he became head master of an elementary school at Oxford, and lecturer at P.-T. classes. He later accepted appointment as secretary and inspector under the Leeds Church Day School Association, resigning after two years to take up an Inspectorship of Schools under the Leeds Education Authority, a position which he occupied for six years. He then became secretary of education for Hornsey, and in 1911 was appointed first director of education for the six Pottery Towns, Stoke-on-Trent. Dr. Freeman has also acted as Deputy Director of Training for ex-service men.

* * *

DR. ARTHUR SOMERVELL has been appointed to the new post of Principal Inspector of Music under the Board of Education. By arrangement with the Scottish Education Department, he will devote part of his time to the work of that department.

THE King of the Belgians has conferred on Mr. J. Turrall, head master of the Blackpool School, the Order of the Crown with Palmes en Or, in recognition of the work done by the school for refugee pupils admitted from similar schools in Belgium.

* * *

BRIGADIER-GENERAL E. M. PAUL, who is to succeed Mr. T. E. Schum-Tuckett as Bursar of Marlborough College, is an old Marlburian. He has served for thirty-four years in the army in India, Gibraltar, Ceylon, and Egypt, and during the war was awarded the C.B. in 1915 for service in Gallipoli and the C.B.E. for merit in Egypt and Palestine, where he acted as engineer-in-chief to Lord Allenby. General Paul is a linguist and a capable lecturer, and since the war he has been Deputy Director of Fortifications and Works at the War Office.

* * *

To the growing list of assistant masters privileged to work upon education committees has been added the name of Mr. N. G. B. James, house master at Mill Hill School, who has been co-opted a member of the Hendon Education Committee. Mr. James has been a prominent worker in public educational matters for many years, and his experience will be of considerable value to the Education Committee.

* * *

MR. G. A. MILLWARD, head master of the Monoux School, Walthamstow, has been appointed head master of the new secondary school for boys which is to be established at Southport next September. It is intended that the school shall be conducted, so far as possible, after the manner of a public school for day boys, and the buildings, which are in progress of erection on a site of fifteen acres on the sea front, have been specially designed for this purpose. Mr. Millward is an old pupil of Nottingham High School and a scholar of Queens' College, Cambridge. He was fourteenth wrangler in 1905, and took a third class in Mech. Sci. Tripos in 1906. Formerly an assistant master at University College School, he has been head master of the Monoux School since 1916.

* * *

MISS MARGARET A. GILLILAND, who died on May 17 last, was for sixteen years the head mistress of the Haberdashers' Aske's Girls' School at Acton. Her academic achievements were brilliant. She was a Fellow of University College, the first woman to be upon its Committee, and a member of the Royal Commission to inquire into the teaching of modern languages. But, for those who knew her as a colleague and a friend, the memory of Miss Gilliland is fragrant by reason of her winsome manner and the way she had with her, rather than for any qualities of mind and brain, however potent. Her ability received almost immediate recognition, for, after only two years as assistant mistress on the staff of Clapham High School, Miss Gilliland went to Acton, and brought to her task an unflinching charm and tact, a sense of humour, and a fervent belief in the dignity and honour of her profession. She worked unceasingly to ensure that, as far as in her lay, the school life of every child under her care should be happy. Miss Gilliland knew each individual child, was the personal friend and confidante of the majority, and her capacity for remembering the details of each one's home life and interests was almost unlimited. But Miss Gilliland was far more than a charming personality; she was a driving force. Her educational aims were high; it was her endeavour to train her girls to take their place as active intelligent citizens of no mean city, though, as the result of her organizing ability, her school was so run that she also obtained a high standard of scholarship. No attempt to portray Miss Gilliland would be honest which failed to mention her steadfast, almost child-like Christian faith, which revealed itself not in words, but in every action of her daily life. She died as she had lived, facing a long illness and its inevitable conclusion, with unflinching courage and a cheerfulness which nothing could daunt.

* * *

THE REV. P. H. KEMPTHORNE, whose death is reported,

(Continued on page 450.)

University Correspondence College.

EXTRACTS FROM PUBLISHED ARTICLES BY GRADUATES IN FIRST CLASS HONOURS.

"I have not the least hesitation in saying that, had it not been for University Correspondence College, I could never have hoped for a degree at all.

"The U.C.C. student is immune from the sorrows that beset the solitary worker, and if he follows intelligently the advice of his tutors he will assuredly conquer every difficulty.

"Nor is it possible to overrate the value of the Notes which accompany each Lesson. At the Examination I met another postulant for B.A., one who knew not the U.C.C. He was sorrowing because of his failure to deal satisfactorily with certain questions bearing upon the *Alexis*, questions of which, to his surprise, I made light. Small credit to me, for my tutor had set forth for me in a few pages all that modern scholarship can tell us on the subject."

"Throughout the course the Notes sent by U.C.C. proved invaluable. Attention was drawn to important movements or events, and a general critical survey of the chief developments was given, so that even before reading the textbook I possessed some acquaintance with the broad issues involved. The Test Papers also were well up to the University standard, and afforded excellent opportunity for practice in answering questions of the type usually set at the Examination. No less helpful were the Tutor's corrections of these Tests, accompanied by model answers."

"Some years ago I was recommended by the son of an eminent classical scholar to employ the services of an institution which he evidently held in the highest esteem. The University Correspondence College accepted

me as a student, and since that time I have looked upon the U.C.C. as my academic solicitor and advisor. Accordingly I enlisted the help of the U.C.C. in my philosophic venture, and under the direction of one of the most sympathetic of tutors I began to see daylight through the labyrinthine forest that stood before me.

"My experience in the Examination was that the U.C.C. course was well planned and adequate in all essential points, and I have no hesitation in saying that the U.C.C. Scheme of Study alone is an admirable guide-book to the B.A. Honours Examination in Philosophy."

"As to my methods of work, are they not written in the Rules and Regulations of the College? My success is due to the fact that I followed as faithfully as I could the advice there given.

"A word to those who, like myself, may have little spare time and who desire to gain a 'First'—it is largely a matter of work and patience. The U.C.C. will help—it is not its fault that every student does not obtain First Class Honours.

"My opinion of the U.C.C. Honours Course in Chemistry is that the knowledge gained, quite apart from any question of success, is worth many times the fee."

The writers of the foregoing extracts were winners of prizes awarded by University Correspondence College.

A full Prospectus of the College may be obtained, post free, on application to the Secretary, No. 24 Burlington House, Cambridge.

MESSRS. LONGMANS, GREEN & CO.

have pleasure in announcing

A New and Thoroughly Revised Edition of LONGMANS' GEOGRAPHICAL SERIES. Book II. The World for Junior Students.

This New Edition has been thoroughly revised and in places rewritten. The Text has been brought into accordance with the decisions of the Peace Treaty, and the Maps have been either revised or redrawn in accordance with the Text.

The book contains 35 Illustrations and 88 Maps, of which 79 are coloured. **Price 4s. 6d.**

The chief alterations are:—

1. **TEXT.**—The Chapters on Germany and Austria-Hungary have been rewritten, and separate sections are now given to—

Germany.	Poland.
Austria.	Czecho-Slovakia.
Hungary.	Yugo-Slavia.

The sections on the Balkan States have also been rewritten so as to show the great changes in Roumania and some of the other States. Throughout the book the Text has been revised as far as it affects former German Colonial Possessions. All this matter has been rewritten in accordance with the most up-to-date information.

2. **MAPS.**—In many cases it has been necessary only to make alterations in the colour and black-and-white maps as well as in red boundary lines, but in the case of Central Europe new Maps have been constructed.

(a) **Northern Central Europe**, showing Germany, Poland, and Czecho-Slovakia.

(b) **Southern Central Europe**, showing the new boundaries of Austria, Hungary, Roumania, and the Yugo-Slav State.

The Map of the **British Empire** has been also brought into accordance with the decisions of the Peace Treaty.

It is hoped that this New Edition will prove of interest, and, with the view to making the book further known, the Publishers will be pleased to consider applications for specimen copies from the Heads of Schools.

A CAUSAL GEOGRAPHY OF THE BRITISH ISLES. By J. MARTIN, B.Sc., Senior Geography Master, Coopers' Company's School, London. With 110 Maps, Diagrams, and Illustrations. **Price 4s. 6d.**

Longmans' Classbooks of English Literature.

A COMPLETE LIST OF ALL MESSRS. LONGMANS, GREEN, AND CO'S BOOKS OF CHEMISTRY, PHYSICS, AND MATHEMATICS WILL BE SENT POST FREE ON APPLICATION.

LONGMANS, GREEN, AND CO., 39 Paternoster Row, London, E.C.4.

was educated at Uppingham, under Thring, and at St. John's College, Cambridge. He served as assistant master, tutor, and house master for thirty-five years at Wellington College, under Benson, Wickham, and Pollock. He numbered among his pupils Prince Adolphus, now Marquess of Cambridge, and the late Prince Francis, Lord Derby, and Sir Arthur Stanley, Lord Knutsford, Lord Denman, and Sir George Buchanan. On leaving Wellington, in 1903, he was presented with the living of Wick Rissington, from which he resigned in 1917.

* * *

DR. H. F. MORLAND SIMPSON, rector of Aberdeen Grammar School, who died on May 15, was a native of Newcastle-on-Tyne. He was educated at Oundle and Pembroke College, Cambridge, and gained a first class in the Classical Tripos. After ten years' experience as an assistant at Fettes he was appointed to Aberdeen in 1893. Under his guidance the social and physical sides of the school have been greatly developed, the high tradition of scholarship being fully maintained, and in recognition of his services to education the University of Aberdeen, in 1911, conferred upon him the hon. degree of LL.D.

ONLOOKER.

TOPICS AND EVENTS.

EDUCATION AT THE BRITISH ASSOCIATION.—The Education Section of the British Association will meet at Cardiff from August 24 to 28, under the presidency of Sir Robert Blair. Many of the papers to be read will deal with separate aspects of a system of national education, and the President intends to open the way for discussion on a broad basis, taking a wider view even than that comprehended in the Education Act of 1918. Following the President's address, the report of the committee upon "Training in Citizenship" will be presented and discussed. Bishop Welldon, the chairman of the committee, has promised to open the discussion, and other speakers will be Lady Shaw and, it is hoped, General Sir Robert Baden-Powell. An animated discussion is expected upon the supply of teachers, the subject being opened by Mr. Spurley Hey (of Manchester). "The Relation of Schools to Life" is another subject of discussion, Mr. Linecar, Mr. McTavish (Secretary to the W.E.A.), and Mr. Bray (Head of the Welfare Department of the Ministry of Labour) being the invited speakers. This will be followed by a paper by Prof. J. L. Myers (of Oxford), upon "The Place of Geography in a Reformed Classical Education," and Dr. Naesar (of the Anglo-Danish Students' Bureau) will give an account of the Scandinavian proposals for encouraging international post-graduate education. The Education Section and the Psychological Subsection will meet in joint session to consider various aspects of the theory of education, the chief speakers being Prof. Percy Nunn, Dr. Simon (the designer of the "Binet-Simon system of measuring intelligence"), and Dr. C. W. Kimmins. The Rt. Hon. H. A. L. Fisher (President of the Board of Education), Mr. Frank Fletcher (Head Master of Charterhouse), Miss H. M. Wodehouse (of Bristol), and Principal Garnett (of Manchester) will deal respectively with the universities, the public schools, the training colleges, and higher technical schools in a national system of education. Correspondence relating to the work of the Education Section should be addressed to the Recorder, Mr. Douglas Berridge, 1 College Grounds, Malvern.

EDUCATION IN INDUSTRY AND COMMERCE.—On June 2 to 4, the Association for the Advancement of Education in Industry and Commerce held its annual conference in Liverpool and Port Sunlight. Discussion ranged over a wide field: adult education, education for commerce, and the work of day continuation schools. Sir Woodman Burbidge assumed the presidency in succession to Lord Leverhulme, who took the chair at the opening meeting. Following the presidential address, and after the Vice-Chancellor of the University had welcomed the Association, Mr. P. A. Best spoke on a novel and attractive subject, "The Educational Value of a Business to its Personnel and to the Community." Prof. J. Montgomery, Principal of Liverpool School of Commerce, introduced the question of education for commerce, and a paper by Miss G. A. Burlton followed. Exceptional interest was aroused by the addresses of Mr. Albert Mansbridge, Mr. W. R. Rae, and Mr. A. Rowland Entwistle on adult education, from different points

(Continued on page 452.)

FROM Mr. MURRAY'S LIST

Forthcoming Publications.

The Groundwork of English.

A Complete Elementary Course of English. By R. B. MORGAN, M.Litt., Inspector of Schools to the Croydon Education Committee. In Two Parts, with illustrations, 1s. 6d. each.

The book is divided into two parts: the first is intended to be dealt with orally, though many of the exercises are so framed that they can be utilised in connexion with the written work which forms the basis of the second part.

Arithmetical Exercises.

By A. E. LAYNG, M.A.

The exercises are arranged in two courses, and are framed with the object of supplying the pupil with as much practical knowledge as possible, without burdening the mind with information which is likely to be useful to a very few.

Great Britain in the Latest Age.

By F. A. HOWE, B.Sc., and
A. S. TURBERVILLE, M.A., B.Litt.

This book has been written to supply the need of those who want a brief introduction to the study of the general history of Great Britain in the Latest Age. It is hoped that it will be of practical use to those engaged in Secondary and Continuation Schools.

Teachers who are interested in any of the above books are invited to communicate with the publisher, with the object of obtaining a specimen copy when it is published.

New Studies of a Great Inheritance.

Being Lectures on the modern worth of some ancient authors. By Prof. R. S. CONWAY, M.A., Litt.D.

These lectures are designed to represent some of the elements in the work of the great ancient writers, amongst whom the poet Virgil has been given the first place.

Recent Additions to Mr. Murray's List.

Exercises in English Grammar.

By R. B. MORGAN, M.Litt. 1s. 9d.

A volume of exercises numbered to correspond with the sections in a "New English Grammar," which will be found capable of being used with any modern textbook on the subject.

Exercises in English Composition.

By E. E. KITCHENER, M.A. 1s. 9d.

This book has been written to help those teachers who prefer to use no regular textbook in composition. It is a companion book to the author's "English Composition."

Write for a Catalogue.

Easy Exercises in Algebra. Containing 3,500 Original Problems. By W. S. BEARD. 4th Edition. 2s. 3d. With Answers, 2s. 6d.

A Junior Geometry. By NOEL S. LYDON, Owen's School, Islington, London. 9th Edition. 3s.

Housecraft Science (Elementary Experimental Physics). By E. D. GRIFFITHS, B.Sc., F.R.G.S. With many Diagrams. Crown 8vo, 3s. 6d.

A Junior Chemistry. By E. A. TYLER, M.A., F.C.S., Head of Chemical Department, Swansea Technical College. With 78 Illustrations. 11th Edition, revised. 4s.

The Complete School Chemistry. By F. M. OLDHAM, M.A., Senior Chemistry Master, Dulwich College, London. With 125 Illustrations. 14th Edition. 7s. 6d.

The Modern Office. By J. STEPHENSON, M.A., M.Com., B.Sc., Business Training School, Polytechnic, London, W. 2nd Edition. 3s. 6d.

of view. The Staff Training College, Port Sunlight, contributed three short but valuable papers on continuation school work. A visit to Messrs. Johnson Brothers' Dye Works and a long day at Port Sunlight factory and village varied the programme. At the business session Sir Jesse Boot was elected vice-president. Principal H. Schofield (Technical College and Instructional Factory, Loughborough) became chairman of the Executive Committee (in succession to Mr. J. Knox), and Miss G. A. Burlton (Selfridge & Co.) vice-chairman. The treasurer and secretary were re-appointed (Mr. T. S. Ratcliffe, Nottingham, and Mr. R. W. Ferguson, Bournville), while Mr. I. W. Thomas (Harrods, Ltd.) undertook to edit the *Proceedings*. An autumn conference will probably be held in London, and next year's annual meeting in Nottingham, by invitation of the new vice-president.

DALCROZE SUMMER SCHOOL.—The London School of Dalcroze Eurhythmics will hold a summer vacation course for adults at Oxford from August 16 to August 28. It will be under the direction of Miss Ethel Driver, assisted by a staff of teachers trained in the Dalcroze Method. The course will consist of daily lessons in rhythmic movement. Students will be graded in classes as much as possible according to capability. The opening address, on "The Fear of Ideas," will be given on August 16, at 5.30 p.m., by Mr. Frank Roscoe.

SWANLEY HORTICULTURAL COLLEGE.—A meeting was held early in June in London to establish on a national basis the training of women as skilled scientific cultivators. During the war, Swanley Horticultural College did excellent work in increasing every kind of home-grown food, as well as in the preservation of food, and in recognition of this work the Ministry of Agriculture is allotting a Treasury grant of £10,000 for the re-equipment and further development of the college, on condition that the general public contributes an equal sum. Never has the need for remunerative and healthy employment for educated women been greater than to-day, and newly erected and equipped lecture rooms and laboratories at Swanley would assist greatly the means to meet the demand for women workers in agriculture and horticulture. The plans for the new science buildings at Swanley are now ready, and the site is selected; all that remains is for the public to provide the

£10,000 required to secure the Treasury grant, so that the work may be completed. Donations may be sent to Messrs. Child & Co., 1 Fleet Street, London, E.C.4.

REGULATIONS FOR THE TRAINING OF TEACHERS.—The issue in draft (surely long delayed) of these Regulations for 1920 contains some noteworthy changes. A new chapter recognizes courses of training for teachers in continuation schools, to be given in university training departments, or, with special approval, in other training colleges, and to extend, as a rule, over at least a full academic year. A new clause provides temporary increases of grant for needy colleges and hostels—an unsatisfactory hand-to-mouth kind of provision, since it must be awkward to embark upon permanent expenditure on the strength of temporary income. Students in residential training colleges may now take the four years' course, if their degree studies are taken at a neighbouring university college, so that they may get the university atmosphere. The course of professional study followed by four-year students is modified, so that the course may prepare more definitely for secondary-school work—a change long looked for by the university training departments. The two-year course of study is modified, so as to make a considerable amount of specialization possible: a definite departure from the bad tradition that every certificated teacher should be prepared to teach every subject in the curriculum. The clauses relating to building grants are omitted, as the matter is still under consideration, and will be dealt with in separate Regulations.

LIBRARY TALKS TO CHILDREN.—With the object of awakening an interest in the books provided for use in the public libraries of Bristol, a series of half-hour talks to school children are given at the Central Library. A special section of the Reference Library has been set aside for the purposes of this new development. The talks are given weekly, and, for the present, 150 pupils attend each week, and all of them are from central or secondary schools. An inspection of a department or section of the library and its contents precedes each talk. Special lists of books contained in the various libraries on the topics dealt with in the talks have been prepared, and a selection of the books is exhibited in the room during the

The BOARD OF EDUCATION emphasizes the usefulness of local history thus:—"It is essential that in each school attention should be paid to the history of the town and district in which it is situated. All great and important events which have taken place in the neighbourhood will naturally be chosen for more detailed treatment. Several changes, such as the foundation and dissolution of the monasteries, should be illustrated by reference to the effect upon the particular district. . . . There must, in all cases, be included a study of those actually existent historical remains such as castles, city walls, monasteries, which are accessible from the school, and in connexion with this the study of the earlier periods must include some knowledge of the elements of architecture."

Two History Readers which fulfil the above conditions.

The County of the White Rose.

An Introduction to the History and Antiquities of Yorkshire.

By **A. C. PRICE, M.A.**, formerly Scholar of Pembroke College, Oxford; Author of "Leeds and its Neighbourhood," &c.

415 pages. Crown 8vo. With upwards of 70 illustrations and a folding map of the three Ridings. Strongly bound in cloth boards. 2s. 6d. net.

Education says:—"Much History has been made in Yorkshire, and here we get just enough about it to make us want to know more. There are chapters on the Land and its Inhabitants, from the earliest historical times down to modern Yorkshire—castles, abbeys, churches, towns, each in turn are described and illustrated. There are 383 pictures, plans, and maps. The whole book is a treasury of information and most delightful reading."

The Story of the East Riding of Yorkshire.

By **HORACE B. BROWNE, M.A.**

368 pages. Crown 8vo. With 170 illustrations. Bound in Art Cloth Boards. Price 2s. 6d. net.

The School World says:—"Mr. Browne gives scarcely more than a reference to what will be found in the ordinary textbooks, and so saves space for more local details. The story is well told, geology, pre-history, architecture, all coming in for treatment, as well as the more obvious facts of social and political life."

THE HEALTHY LIFE

seeks to give expression to ideas which hold in them the promise of a sweeter and cleaner life for all. Which is one reason why its circle of readers is continually growing.

¶ Send 7d. for the current Number to "The Healthy Life" Book Shop, 41 Margaret Street, London, W.1. The organization of the Book Shop is at your service. Any book will be quickly dispatched to your order.

address. Among the subjects chosen for consideration already are: "Books and How to Use Them," "Trains of Reading," "Introduction to the Literature of Bristol History," "Schools of Other Days," "Classics in Translation," and "The Story of London." This very interesting experiment was well worth arranging, and its results will be watched with much interest.

ROYAL ACADEMY OF MUSIC.—The competition for a number of scholarships will take place at the Royal Academy of Music on or about September 16 next. Among the scholarships are the Maud Mary Gooch Scholarship for organ playing, the Elizabeth Stokes Scholarships for pianists, the John Thomas (Welsh) Scholarship for vocalists and instrumentalists, the John Stokes Open Scholarship for baritone vocalists, the Campbell Clarke Scholarship for female vocalists (mezzo-soprano voices only being eligible), and the Ada Lewis Scholarships. Entry forms may be obtained from the Secretary, Royal Academy of Music, Marylebone Road, N.W.1.

TRINITY COLLEGE, OXFORD.—An examination will commence on December 7 next for the purpose of filling up four open scholarships of the annual value of £80, inclusive of all privileges and allowances. Candidates for these must not be more than nineteen years of age on December 14. Two Open Exhibitions, with the title of Minor Scholarships, and of the annual value of £70, will also be awarded on this examination. There is no limit of age for these. The examination will be held in common with University, Oriel, New, Brasenose, Corpus Christi, and Wadham Colleges, and Christ Church. In awarding one at least of the scholarships or minor scholarships, special importance will be attached to proficiency in modern history. For this purpose, two special papers will be set on English and European History, strictly as alternatives to the Greek and Latin Verse papers. Every scholarship is tenable in the first instance for two years, and will, as a rule, be prolonged for two years more if the President and Fellows are fully satisfied with the industry and good conduct of the scholar.

PRIMARY SCHOOL NOTES.

The Summer School Courses.

THE arrangements for the organization of Vacation Courses during the present summer indicate a great forward movement in the development of what may be regarded as the research work of the teaching profession. Facilities are offered for the study and discussion of practically all subjects which possess interest to students and teachers; and, generally speaking, the centres are fixed in localities where some relief from the stress of study may be obtained by means of outdoor excursions. In addition to courses available at the universities and training colleges, others are organized at Oxford, Eastbourne, Aberystwyth, Scarborough, Ilkley, Southport, and St. Annes. The number of applications for the courses is surprisingly high, and out of all proportion to the available accommodation; and, owing to the keenness of the students in their work, there is some danger that they may return to school duties lacking the physical freshness bestowed by a real holiday. The courses for rural teachers at Oxford include history, geography, and English. The English course will include lectures and tutorial work, and there will be special lectures each afternoon or evening by such authorities as Prof. Gilbert Murray, Mr. G. K. Chesterton, Dr. Bradley, Mr. John Masefield, and Mr. Thomas Seccombe. In addition, there will be combined meetings for all sections, and it is hoped that Mr. H. A. L. Fisher will address the final gathering. The geography and history courses, which will include outdoor work, are similar in scope, and, as the students will have the advantage of a preliminary course of reading, the ultimate benefit to their professional work promises to be substantial.

National Federation of Women Teachers.

THE annual conference of the National Federation of Women Teachers at Bath maintained the tradition of the meeting in its comprehensive discussions of vital points in the national plan of education. Its unanimous opinion that all juvenile employment for profit during the period of school age should be prohibited gave an inspiring lead to those education authorities who are still considering the advisability of formulating by-laws which permit children below the age of fourteen years to engage in work every day in the week, including Sundays. The compulsory establishment of

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the SUMMER VACATION for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the
ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, saves labour, and is easily applied by the unskilled. Not sticky—the ordinary daily dry sweeping alone required.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for
2 to 12 months, according to the traffic, not only **during each sweep-**
ing (without sprinkling of any kind), but **also throughout all the inter-**
vening periods—which is even of **greater hygienic importance.**

"Florigene" has been continuously used for many years on the floors of The Royal Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

St. Anne's Institute, Island Street, Nottingham

nursery schools, and a call for a free primary and secondary school system, were also advocated by the conference. Other resolutions approved by the Federation included a claim that the Federation should be represented on conferences and committees set up in the interests of education, equal pay for men and women teachers, the removal of disabilities connected with the appointment of married women teachers, and a call for a minimum pension of £2 per week for retiring teachers. Miss Hewitt, of East Ham, was elected president, in succession to Miss Dawson.

The National Association of Schoolmasters.

REPORTS from all quarters show that the new association for men teachers is increasing its membership largely. Branches are being established even in county areas where men teachers are in a great minority, and it is significant that the ex-service teachers are particularly enthusiastic as organizers. There appears to be a general feeling of soreness among them that the question of equal pay for men and women teachers should have been forced to an issue at a time when they were absent in the field. One result has been the preparation of independent salary and bonus claims for presentation to local education authorities in various places, and a strong campaign is being quietly carried on against the small margin of difference which at present exists between the salaries of men and women teachers. It is pointed out that the lack of men recruits to the profession is a direct result of the inadequate salaries now obtaining. And, since the whole-hearted co-operation of men teachers is essential for such recruitment, it is clear that education committees will soon have the opportunity of viewing the position from a new standpoint.

The Conference of Head Teachers.

AN unusual feature of the annual conference of the National Association of Head Teachers held at York was the charge made by the local inspector of the Board of Education, in welcoming the representatives, that they had deliberately kept young people from entering the profession. The incoming president, Mr. Farthing (of London), discussed the suggestions made by Mr. Fisher in relation to religious instruction in schools and the possibility of unifying the existing system. While opposing the right of entry to Council schools, Mr. Farthing expressed the feeling that the proposals might be accepted with advantage to the scheme of national education and without any sacrifice of principle by either side in the discussion. The conference expressed its approval of a scheme of primary schools, with sections for secondary education for pupils between the ages of eight and fifteen years; and the establishment of works schools was opposed as being lacking in the essentials of a sound general education owing to their subordination to utilitarian ideals and workshop practice. It was agreed that the conditions of service and salaries in day continuation schools should be similar to those of secondary schools, and that there should be free movement of teachers from one type of school to another. A notable feature of the report of the Council is its strong protest against the non-representation of the Association on the Burnham Committee, and its expression of regret at the inadequate concessions made in the salary scales to the work and status of head teachers. In discussing the training of teachers, the Conference recommended the abolition of the student-teacher year, the linking up of all training colleges with the universities, the extension of the training-college courses to a minimum period of three years, with the condition that the final year should be spent in practical training at suitable schools connected with the college curricula. Mr. Dogherty, of Newcastle, was elected vice-president and Mr. Jackson, of Nottingham, takes the place of Mr. Dogherty as secretary.

National Union of Teachers.

THE growing activity of the National Union of Teachers is illustrated by its well defined movement in the direction of unifying all the sectional activities directly connected with its particular sphere of professional organization; and also in its co-operation with other associations engaged in various departments of social welfare. In addition to its committees which deal with the particular interests of teachers in continuation and other schools, there is an advisory committee for teachers in rural schools, one for uncertificated teachers, and a third for Poor Law teachers. The Examinations Board conducted tests for 10,931 candidates during the spring term, while 129 cases were recently dealt with by the Law Committee. At the present time practically every member of the Executive is serving, on behalf of the Union, upon one or more outside bodies interested in various forms of related work. There is reason to believe that the growing call for teachers as members of committees is due, in part, to their practical experience in methods of organization.

A NEW PRESENTATION OF EDUCATIONAL PROBLEMS.

THE MODERN EDUCATOR'S LIBRARY.

General Editor: PROFESSOR A. A. COCK,

Professor of Education and Philosophy in University College, Southampton.

Index and comprehensive bibliography in every book. Uniform cloth binding. 6s. net each volume.

The MODERN EDUCATOR'S LIBRARY has been designed to give considered expositions of the best theory and practice in English education of to-day. It is planned to cover the principal problems of educational theory in general, of curriculum and organization, of some unexhausted aspects of the history of education, and of special branches of applied education.

Education: Its Data and First Principles. By T. PERCY NUNN, M.A., D.Sc., Professor of Education in the University of London. Second Impression ready.

The Child under Eight. By E. R. MURRAY, Vice-Principal of Maria Grey Training College, and HENRIETTA BROWN-SMITH, L.L.A., Lecturer in Education, Goldsmiths' College, University of London.

Moral and Religious Education. By SOPHIE BRYANT, D.Sc., Litt.D., late Head Mistress of the North London Collegiate School for Girls.

The Teaching of Modern Foreign Languages in School and University. By H. G. ATKINS, M.A., Professor of German in King's College, University of London, and H. L. HUTTON, M.A., Senior Modern Language Master at Merchant Taylors School.

Other volumes in preparation.

THE JOURNAL OF EDUCATION (on first three volumes):—"The first three volumes promise exceedingly well. Every generation needs to have the philosophic basis of the best educational thought and practice restated, and for the present generation Prof. Nunn has performed the task of restatement in a way which we do not hesitate to describe as masterly. A most original and stimulating book which all who pretend to be interested in the root principles of education must read. The ripe wisdom which informs Mrs. Bryant's whole treatment of moral education, Bible teaching, and the presentment of essential religious truth would be hard to match elsewhere. Mrs. Bryant's book is of great value at the present time."

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.1.

BLACKIE & SON'S SELECT LIST.

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. Price 1s. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known Junior School Shakespeare, which omits everything that might be thought undesirable in class reading. Cloth covers, price 7d. each.

THE WARWICK SHAKESPEARE.

General Editor—Prof. C. H. HERFORD, Litt.D.

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. net each.

PREPARATORY COURSE OF LITERARY READING & COMPOSITION.

DAUDET—LE PETIT CHOSE À PARIS.

DAUDET—LETTRES DE MON MOULIN.

BALZAC—UN ÉPISODE SOUS LA TERREUR.

BRUEYS AND PALAPRAT—L'AVOCAT PATELIN.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

PUBLISHED IN TWO VOLUMES.

By **E. J. A. GROVES,**

Lic. ès L., Senior French Master, Bedford Grammar School.

First Year, 2s. 6d. net.

Second Year, 4s. net.

The need of a practical French Course combining the essentials of the "Direct Method" with sound grammatical teaching has long been felt, and has been lately emphasized by the Reports on the *Teaching of French* issued by the Board of Education and the London County Council respectively. The "Direct Method" alone has been found to leave the pupils ill prepared for precise expression or exact renderings in translation, and generally wanting in an exact knowledge of French. Mr. Groves's *Junior French Course*, now issued, undoubtedly demands the consideration of all Modern Language Teachers, for it will be found to combine all that is useful of the "Direct Method" with systematized grammatical instruction, largely by process of induction.

BLACKIE'S LONGER FRENCH TEXTS.

From modern French Literature. A series of continuous Readings from Modern French Authors. Printed in large type, with brief Notes, Questionnaire, Phrase-list, and Vocabulary. Each volume contains about sixty pages, and is furnished with a vocabulary and other teaching aids. The texts chosen are either complete short books or are skillfully abridged from longer works. Cloth covers, 1s. each.

Over 60 celebrated French Authors are represented in this series, such as **About, Bossuet, Daudet, Montaigne, Balzac, Boileau, Dumas, Racine, Beranger, Corneille, La Fontaine, Voltaire, &c., &c., &c.**

BLACKIE'S LITTLE FRENCH CLASSICS

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo, 7d. each.

Characteristic selections from well-known French writers, of sufficient length to be interesting in themselves, as well as representative, as far as possible, of the work of the several authors. Each book consists of from 40 to 64 pages, including a biographical and critical note, text, and explanatory notes. Certain volumes are issued with vocabulary, and a number are provided with questionnaire. Price, with a few exceptions, cloth, 7d. each; with Vocabulary, 8d. each.

Authors represented in this series: **About, Hugo, Mérimée, Dumas, Feytaud, Daudet, Souvestre, Verne, &c., &c.**

BLACKIE'S FRENCH PLAYS.

Carefully edited and presented in readable and serviceable form, these plays will be found admirably suited to the needs of the classroom. The series includes examples of all styles, from the classic tragedies of Racine to the sparkling comedies of Labiche. In blue cloth covers, 1s. each.

AUGIER AND SANDEAU—LA PIERRE DE TOUCHE. H. W. PRESTON, M.A., Devon County Council Staff Instructor in Modern Languages. (With or without Vocabulary.)

AUGIER AND SANDEAU—LE GENDRE DE MONSIEUR POIRIER. H. W. PRESTON, M.A.

BEAUMARCHAIS—LE BARBIER DE SEVILLE. W. G. HARTOG, B.A., University College, London.

BOUILLY—L'ABBÉ DE L'ÉPÉE. W. G. HARTOG, B.A.

BRUEYS AND PALAPRAT—LE GROS-DEUR. MARGUERITE D. M. GOLDSCHILD, B.A.

DELAVIGNE—LOUIS XI. MARGUERITE D. M. GOLDSCHILD, B.A.

MOLIÈRE—MONSIEUR DE POURCEAUGNAC. SYDNEY H. MOORE, Eltham College, Kent. With Exercises.

MOLIÈRE—L'AVARE. G. H. CLARKE, M.A., Officier d'Académie.

MOLIÈRE—LE BOURGEOIS GENTIL-HOMME. Professor MAURICE GEROTHWOHL, Ph.D., Litt.D.

MOLIÈRE—LES FEMMES SAVANTES. G. H. CLARKE, M.A., Officier d'Académie.

MOLIÈRE—LES PRÉCIEUSES RIDICULES. G. H. CLARKE, M.A.

MUSSET—FANTASIO, ETC. W. F. P. PRIOR, of Cheltenham College.

THE PROVISION OF CONTINUATION SCHOOL EDUCATION.

By C. WILLIAMS.

I.

SIR MICHAEL E. SADLER predicted, a good many years ago, that some form of compulsion to attend day or evening continuation classes would be found desirable, not so much in the interests of picked individuals as in that of the rank and file. He said: "It will be best introduced by slow instalments on a principle of local option. Those cities or districts which find local opinion ripe for the change should be empowered by law to make attendance compulsory at continuation schools within such limits as may seem to be expedient." After discussing different methods of organization, he wisely concluded by saying: "The educational success of any of these plans will depend upon reforms being made in the adverse conditions under which teachers and pupils in the elementary day schools have now, too often, to do their work. The root of the matter lies in the reform of the elementary school."

The Order recently made by the Board of Education, appointing May 1 for the operation of Sections 11 and 16 of the Act of 1918, provides the machinery for the enforcement of attendance at continuation schools, and for the punishment of those who illegally employ children and young persons. But these sections will remain inoperative until, in any particular administrative area, a day is appointed for the adoption of Section 10, under which all young persons of fourteen years of age are compelled to continue their education.

Mr. Fisher has expressed the hope that the section may be brought into operation in the autumn of 1921. Meanwhile, Local Education Authorities are considering ways and means and a limited number of experimental schools have been established.

The Kent Education Committee, after conference with

representatives of numerous education authorities, have adopted a series of interesting recommendations. It is proposed that the system of day continuation schools, on a compulsory basis, shall be introduced gradually throughout the county as buildings and teachers become available—the urban areas being dealt with first and the rural areas subsequently. Every endeavour shall be made, it is stated, to open schools in the course of 1921. It is understood that the London County Authority, where there are 70,000 young persons, favour January 1, 1921, as the day to be appointed, and are taking steps to secure the services of qualified principals for about twenty schools. The Kent Committee have decided to ask the Board of Education to fix an appointed day in respect of the young persons residing in their area, who work in London, which shall be the same as the appointed day for young persons living in London.

In Warwickshire schools have been started at Stratford-on-Avon and Rugby, and also at Kineton, a village in an agricultural district. The students, it is said, "have, of course, joined the classes voluntarily, but it is confidently believed that the tone and spirit already secured will be maintained when the boys and girls come in who have to attend compulsorily."

No official information is as yet available regarding the number of continuation schools organized by various authorities throughout the country on a voluntary basis. In many of the large towns, no doubt, more particularly in connexion with some particular industry, useful beginnings have been made. But it may be taken for granted that the isolated and tentative efforts made by different authorities are, in relation to the general question, a negligible quantity.

In the county of Northumberland it is estimated that there are about 16,000 children between the ages of fourteen and sixteen, 13,000 in the urban, and 3,000 in the rural districts. The Committee are doubtful whether the institutions should be organized to continue the curriculum of the elementary school and also whether any attempt should be made (except incidentally or under the special circumstances of certain districts) to render the training they are to afford vocational. It is suggested that—just as girls, whatever their occupations and interests may be, must be potentially home-makers and mothers—the boy, whatever his employment or aptitude, will, in due course, become the citizen. The continuation school, therefore, broadly considered, will probably serve the best purpose if its aim is primarily to influence conduct and develop character. To provide and equip the buildings required for the urban districts, an expenditure of at least £250,000 will be required and an annual charge of £100,000 for the purpose of maintenance. In regard to the rural districts, owing to geographical conditions, it would be impracticable for pupils to travel in sufficient numbers to justify the establishment of special centres. It is recommended, therefore, that facilities should be offered, by means of supplementary classes, at existing elementary schools. Three "experimental" schools are in progress in Northumberland: one in connexion with a shipyard, one at a steel works, and the third at a colliery. For the special purposes for which they have been established they appear to be entirely satisfactory, but cannot be regarded as affording any information likely to be of much value for general purposes.

II.

The President of the Board of Education believes that the development of continuation classes for adolescents is one of the most important educational reforms ever put before the country. It is, but success or failure will depend partly upon the condition of the material with which the schools are called upon to deal ("the root of the matter lies in the reform of the elementary school") and largely upon the sufficiency or otherwise of the machinery available for dealing with it. The machinery cannot be provided "on the cheap." It would be inexpedient, as many authorities recognize, to embark upon a large expenditure for new buildings before experience shows precisely what is required, but suitable accommodation of some sort must be secured. There must be also an adequate

supply of well qualified teachers and supervisors. Sir Michael E. Sadler, as noted above, favoured the introduction of the system by slow instalments. It was wise counsel. The success of day continuation classes organized by benevolent employers in connexion with particular industries or similar enterprises arranged by authorities experimentally for selected students, is an indication of possibilities. But there is a wide difference between the task of dealing with the willing few and persuading or coercing the reluctant many.

After the appointed day, in any area, something must be done for every young person who reaches fourteen years of age and whose education is not otherwise continued. The difficulties, if not insuperable, will be formidable. It is not the development of an existing institution, a new member grafted upon an established growth. Had this been the case, the appointed day might have been anticipated with less misgiving. If, for instance, a beginning had been made with supplementary classes in connexion with primary schools or the system of evening classes extended, with an obligation upon young persons to attend, the supply and organization of the facilities would not have been impracticable, nor would the change from the point of view of the parent, the employer, and the young person have been so revolutionary. As the Act stands, however, the continuation school is to be an independent addition to the agencies hitherto responsible for the supply of education. "The further it is possible to break away from the traditional conception and nomenclature of a school," it is said, "the better."

It is not surprising that so progressive an authority as the West Riding of Yorkshire Education Committee should have adopted a recommendation proposing, as an alternative to compulsory attendance at day continuation schools, the provision of advanced instruction in central schools or classes at which attendance should be obligatory for all children up to fifteen years of age, and later to sixteen. This is, perhaps, a solution of the perplexing problem which is educationally sound. Whether it would be economical financially depends upon the extent to which the claims put forward for compensation in respect of wages that might have been earned by persons compelled to attend school beyond the age of fourteen are to be satisfied. The wages demanded by co-operative employes for juveniles of fourteen years of age is 20s. a week for boys and 15s. a week for girls. A boy of the same age occupied in mining earns 35s. a week. Is the country prepared to pay not only the heavy additional cost of further education, but a subsidy to the parent for the maintenance of the young person whose earning capacity is curtailed? We must not forget the instruction of the Labour Party to its constituents to "see that your local education authority uses its power to provide maintenance allowances for young persons whenever desirable."

III.

The question of fixing the "appointed day," therefore, must be as perplexing to the President as that of the future of non-provided schools; in many ways it is of more importance. A non-provided school is the survival of a vested interest, and, as nearly everyone knows, the majority of parents care very little whether the elementary school attended by their children is denominational or undenominational in character. If they do care, they are protected by the conscience clause. On the other hand, of course, in addition to the legal representatives of the vested interest, who may be determined to maintain their privileges, there is an uninfluential body of opinion that would preserve the religious impulse in educational institutions, and who believe that moral development can be secured only on a basis of dogmatic religious teaching. The controversy is old and the arguments familiar. When it is settled—as we think must be the case if there is to be a productive organization of educational resources—it will not occasion any particular disturbance of habit or outlook.

The inauguration of compulsory part-time schooling for all young persons between the ages of fourteen and sixteen is, however, a different matter. It concerns everybody, and to a very definite degree further curtails the liberty of the parent,

of the employer, and of the young person. If those in authority hesitate to appoint a day for the general introduction of a change so momentous, it is not surprising. To create the machinery necessary to give practical effect to the change would be sufficiently difficult under normal conditions; at present, the conditions are the reverse of normal; they are assuredly much less favourable than it was anticipated they would be when the Act of 1918 became law. What is the position in nearly every administrative area? The supply of new school accommodation has been arrested for five years, and there are serious arrears; even repairs and renovations are long overdue, and, while the cost of building is about three times the pre-war rate, it is only with great difficulty that tenders can be secured and contracts completed. The supply of teachers is entirely insufficient for the system of education as it stands, and additional training colleges are urgently needed. In the interests of the health and physical welfare of the children, nursery schools, dispensaries, and clinics ought to be established, and so far very little attempt has been made to supply suitable schools for the education of defective children.

If to all these outstanding liabilities are added the statutory obligation to secure adequate and suitable provision by means of central schools, central or special classes, or otherwise, for including in the curriculum practical instruction suitable to the ages, abilities, and requirements of the children and of organizing advanced instruction for older or more intelligent children, it must be obvious that even a "benevolent, intelligent, and scientific educationist in Utopia" might hesitate to augment the burden. It is, however, competent for the Board not only to appoint different days for different provisions of the Act, but also "for different areas or parts of areas, and for different persons or classes of persons." Possibly, therefore, a way may be found to introduce the new educational development by slow instalments.

CORRESPONDENCE.

THE SECOND UNIVERSITY FOR LONDON.

To the Editors of The Journal of Education and School World.

SIRS,—On June 4, the students of the Imperial College of Science held a meeting in support of the proposal to amend its charter so that it may have the power of granting degrees. Lord Morris was in the chair, and Mr. H. G. Wells made a witty speech, in which he brought forward the old contention that a scientist was as cultured as a humanist. The present university has never denied this, and we do not think that is the reason why it desires to keep the Imperial College within its fold. It is naturally fearful that, if one constituent college breaks away, there may soon be five or six universities in London, each granting degrees, perhaps of very different value.

It should be perfectly easy for the Imperial College to alter its Matriculation Examination so as to bring it up to university standard. Then, if the professors were given a more reasonable amount of autonomy, all would be well. It is curious, however, to see a usually so well informed paper as the *Times* saying: "The machinery [of the university] is too cumbrous, and too much dominated by the external, or degree-by-examination side, which is incongruous with the aims and methods of a real teaching university." Considering all the ink that has been shed on behalf of that very right, and considering the high standard of the London external degree, it is strange that any leader-writer should be so reactionary. Unless the capital of the Empire can have a university open to all those who can pass its tests, the cause of higher education will receive a bad set-back.—Yours, &c.,

EXAMINER.

LIBRARY OF THE UNIVERSITY OF NANCY.

To the Editors of The Journal of Education and School World.

SIRS,—At the end of the war, on October 31, 1918, the library of the University of Nancy was destroyed by an incendiary bomb, and the English section, in particular, suffered heavily. Not a single volume remains of the works of such standard English authors as Carlyle, Dickens, Meredith, Scott, Matthew Arnold, Robert and Elizabeth Browning, Fielding, Smollett, Richardson, Jane Austen, Swift, Pope. Efforts are being made by the University of London to assist the University of Nancy in re-establishing its library after the ravages of the war. Already about five hundred volumes have been collected for this purpose, and an appeal is now made to all who are in a position to contribute books to send them to the undersigned, who is in charge of the work. Gifts of money for the purchase of books will also be gratefully received.—Your obedient servant,

REGINALD A. RYE,
Goldsmiths' Librarian, University of London.

WOMEN'S HOLIDAY FUND.

To the Editors of the Journal of Education and School World.

SIRS,—Will you allow us once again to appeal in your columns for the Women's Holiday Fund? The object of this Society, which began its work in 1895, and whose activities are not so well known as they deserve to be, is to help the London working woman to have a week or a fortnight's holiday by the sea or in the country.

No doubt it will be thought by some that, in view of the higher wages, such help is no longer needed. This is certainly not the case. There are many, it is true, who can now enjoy a holiday, the full cost of which they are, for the first time, able to afford, but hundreds and hundreds, having spent their weekly money on the bare necessities of life, have no margin left for such a luxury as a holiday. Help is badly needed—for the lonely woman dependent on her own exertions for her livelihood, for the mother of a large family whose perplexities and cares increase as prices mount steadily upwards, and for the tired woman with her little baby, who is told by the doctor that all she needs is rest and change.

Some are being sent away this year who have never had a holiday in their lives before—two of them are over sixty years old!—and they are now looking forward to it as a new and exciting experience.

All applicants pay as much as they can towards their expenses, which are this year very heavy, but the Society has to meet about two-thirds of the total cost. We feel sure that, if all holiday-makers will only allow their imagination full play and will picture to themselves what it means not to have a holiday every year or never to have one, they cannot help responding to this appeal, but will gladly put their hands into their pockets and send us shillings or pounds to enable us to bring a little brightness and sunshine into some rather drab but very uncomplaining and unselfish lives.

Donations will be gratefully acknowledged by The Secretary of the Women's Holiday Fund, 76 Denison House, 296 Vauxhall Bridge Road, S.W.1.

"A SCHOOL LABORATORY LIBRARY."

To the Editors of The Journal of Education and School World.

SIRS,—In answer to "Science Master's" inquiry in your June issue, for a list of volumes dealing in a popular but accurate way with subjects of general scientific interest, may I call his attention to a list published in December by the Association of Science Teachers?

The books enumerated in this list were carefully selected from among modern and standard books and include those for use in class, for reference by both pupils and teachers and for general school libraries, and a special point was made of histories of the sciences and of biographies of famous men of science. Botany, Chemistry, Geology, and Physics have been dealt with at present, but the Association hopes to publish in the autumn a supplement bringing the existing list up to date and also including Zoology and Natural History.

The Book List (1s. 2d. post free) may be obtained from Miss F. Storr, 12 Angell Park Gardens, S.W.9.—I am, yours, &c.,

EMILY WILSON
(Association of Science Teachers).

THE INTERNATIONAL STUDENTS' BUREAU.

To the Editors of *The Journal of Education and School World*.

SIRS,—While the material available to-day for the student in every branch of knowledge shows, in volume and accuracy, an immense advance on that of past times, the methods and the apparatus for its assimilation are often quite appallingly crude, cumbersome, and ineffective. In consequence, much time spent in study is wasted, and information gained in reading and in classes is not preserved in any serviceable form.

To grapple with this difficulty, the International Students' Bureau has been established by Mr. Victor Russell. It is, in large measure, the outcome of his own experience, and has for its aim the co-ordinating of all research bearing on the best methods of study. It aims, further, at giving practical form to the conclusions of experimental psychology, designing and providing the educational apparatus and devices which these conclusions show to be needful for efficiency.

Though still in its early stages, the Bureau has won the cordial approval and co-operation of a wide circle of educationists, both in this and other countries, and has produced appliances of first-rate educational value, some of which are now being used with success in a number of schools and colleges.

The headquarters of the Bureau are at 56 Russell Square, where visitors are always welcomed and shown the whole purpose and work of the institution. The results of psychological research are brought into service in numerous directions, prominent among which is the application of the unit principle to various problems of learning. This finds practical expression in a coherent system of note-taking and filing, which adapts loose-leaf methods in every particular to the work of students, and is based upon a scheme for international standardization, both of sizes and gauges—a most important reform. The Bureau has organized a publication and supply department, which arranges for the production of the devices and materials designed, in order that everything making for educational efficiency may be placed within reach of all.

The basis of the movement must be a wide co-operation of experts in every line of study. To this end it seeks to gain and maintain contact with all who are sympathetic with its purpose. Such a scheme cannot be confined to any one country, and arrangements are already in progress for the opening of branches in various European and Oriental centres. Both in aim and achievement the work of the Bureau is worthy of the enthusiastic support of educationists. That it has something of considerable value to contribute is recognized by all who realize the meaning of its work.—I am, &c.,

MALCOLM M. THOMSON.

AN APPEAL FROM HUNGARY.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—A former student of mine, teacher at a girls' high school in Budapest, has sent me a letter, in which he speaks in moving terms of the distress in his country. I venture to ask you to find space in your valued journal for the following extract in the hope that some of your readers may give much needed help:—

"Now that war is over, and the Treaty will be signed by Hungary, it can be hoped that the connexion of good old times will be taken up between England and Hungary, especially as there was no hatred against England in our country. English citizens enjoyed the greatest freedom even in the bloodiest days of the raging war. . . . We Hungarian teachers are in a miserable state. Prices are sixty-seven times as much as in 1914, and our income is only the double of the former income. My payment, e.g., is 900 kronen a month. (A pound is 830 kronen now instead of 24 kronen.) Need I tell you more?"

"The greatest task of our renovation awaits the teachers; the work of them is led by 'The Hungarian National Confederation of Secondary-school Teachers.' In the name of this Confederation I write to you, dear Sir.

"The maintainers of our schools—the Government, the cities, and churches—are entirely ruined and are struggling for bare existence. Thus, our Confederation is unable to provide the material means necessary for the success of our work. We do not need much, only a small amount, easily dispensable in more fortunate countries.

"We appeal to our colleagues, to our lucky English friends, to help our Confederation, our fund, with their pennies. Help and you save our future generation, culture, and civilization.

"We ask our English colleagues to send their contributions to the following address:—'National Hungarian Confederation of Secondary-school Teachers, Budapest IV, Piarista utca 3.'—Yours faithfully,

WALTER RIPMAN.

45 Ladbroke Grove, London, W.11.

FOREIGN AND DOMINION NOTES.

FRANCE.

Let it not be thought that we are hostile to classical studies—no more hostile to them, we, than to the solar system. But in discharge of our duty we report a general tendency to reweigh them. The *Revue Universitaire*, stout upholder of classicism, heads its May number (xxix, 5) with an article on "L'enseignement du latin," by Prof. René Waltz, of the University of Lyon. He argues that the number of pupils who take up Latin should be reduced; that the instruction, which has suffered in rigour and in precision under the influence of the Direct Method, should be improved; that the teachers of Latin should be specialists—"latinistes de goût, de vocation et de métier." It is the first contention that is relevant here. What should be the extent of the reduction? Prof. Waltz is for "l'élimination des inaptes," and he declares that three out of every four who learn Latin in French schools are quite unfit for studies of the kind. What proportion of the boys who learn Latin in our English schools have the due natural aptitude for it? It is a question that it were hard to answer. At a time when the sciences were too little developed to be taught in schools, and when the internationalism of Latin left modern languages to the vulgar, Latin and Greek were chosen as the best disciplines for the human intellect. Then it was discovered that the human intellect did not exist as a unity capable of general treatment. Psychology should enable us to select more nicely the disciplines appropriate to each individual mind. It will disappoint us if Latin and Greek are not found fit for the brightest intellects.

It was thought at one time that technology would decide the war, and in November 1915 the Direction des Interventions centralized the labours of some ten sections. Technical triumphs have resulted in quickened zeal for technical education. The universities are yielding to the new demand; and at Bordeaux, for example, there have been instituted a school of radiotelegraphy, a *brevet d'électricien radiotélégraphiste*, and a *diplôme d'ingénieur radiotélégraphiste*. The Law of July 25, 1919, often called from its chief author the *loi Astier*, foresees schools of technical instruction, public or private, and not obligatory; and obligatory vocational courses for all apprentices and other employés under eighteen years of age. Of great economic importance, the law will have the limits and mode of its application fixed by means of administrative decrees. Before these are formulated, all the parties interested are being consulted by means of a *questionnaire* (text in *Bulletin administratif du Ministère de l'Instruction publique*, No. 2421). Two general principles seem to be accepted already. (i) For the great mass of workmen apprenticeship should be in the workshop or dockyard, this apprenticeship being reinforced by vocational courses. (ii) For certain vocations the necessary preliminary training can be done in the school, which should be enabled to turn out efficient recruits for service in manufactory or workshop. One of the questions circulated relates to that important matter—the employment of the leisure that comes from shortened hours of labour.

GERMANY.

There is some reason to believe that culture and the intellectual life in Germany are being crippled. Books are dear: a little volume of Reclam costs 1.20 marks, and for any large scientific work a price is asked that few can pay. *Privatdozenten* and "extraordinary" (*ausserordentliche*) professors mourn that they cannot clothe and feed themselves. With paper scarce and the hope of sale small, publishers will not undertake serious works. Even where State aid is continued in support of learning, the value of the allotted sum is one-tenth of what it was. For the most part, it is denied: *die Goldesforten sind verammelt*. Thus, when, as we reported, the academies appealed to the National Assembly for a grant in aid of learning, their appeal was rejected.

Amid financial embarrassments and political confusion, Germany finds heart to discuss the training of teachers. An aim of the new democracy is *Einheitlichkeit des Lehrerstandes*—homogeneity among teachers; the gulf between *Oberlehrer* and *Volkschullehrer*, between secondary and primary teacher, is to be filled. The Constitution (art. 143, sec. 2) lays down that the training of all teachers is to follow the principles which prevail for higher education in general, and that it shall be uniform for the whole *Reich*, or Empire. Accordingly, all teachers will be educated in a nine-class secondary school. They will pass thence to a *Hochschule*. It is debated whether the *Hochschule* should be an existing university or a special pedagogic academy to be called into being.

In the former case it is feared that the universities would be overcrowded (Leipzig, for example, would receive an addition of some 1,500 students); in the latter case, great expenditure were necessary, and the separation of the teachers would affect their social education. Time will be required to reach the stage of universally determinative action. Meanwhile it is agreed that the German teacher must henceforth be the apostle of *Wissenschaft*, the one authority that remains firm in the general disorder.

UNITED STATES.

America is suffering from a lack of teachers. Look at the rural schools as depicted in a Report recently made by Prof. Judd, of Chicago University. "One million pupils in the rural schools of this country at the present time are taught by young girls who have themselves had no more than an eighth-grade training. One hundred thousand of the rural teachers of this country are sixteen, seventeen, and eighteen years of age. More than half the rural teachers are less than twenty-one. It should be borne in mind that the rural teachers have to work for the most part without supervision, and that they teach about 60 per cent. of the pupils of the United States." As to the schools in general, an inquiry pursued by the Bureau of Education showed that in January 1920 more than 18,000 posts were vacant in the public schools of the country. For want of teachers many schools were closed—in Texas, 2,000; in Virginia, 1,500; and in Alabama, 450. It is true that in many districts the difficulty was overcome by consolidating schools; yet a certain number of children have at present to forgo that education which Americans deem their inalienable right. Teachers need training, and the diversion of the young to more lucrative callings will tend to deplete the schools of the future. For, indeed, this "shortage of teachers" is a recurrence of that old shortage of willingness to pay men and women to teach. But, for the divinely called, teaching has its peculiar joys; and wise voices in the United States proclaim to the young that salary is not the whole of life. As other attractions to draw them are proposed an increased independence of thought and action, a greater share in the control of the school, a louder voice in the choosing of methods and matter. Yet perhaps it were well to begin by loosening the purse-strings.

Through the Eyes.

Visual education is being brought more and more into prominence. In the United States a strong Society for Visual Education has been incorporated, its seat being Chicago, where, too, is published *Visual Education* as the organ of the movement. The journal (1, 2) reasons thus: "The greater part of education is not deliberate or intentional. It is a slow process, but constant and inevitable. Every conscious moment, from the first cry to the last breath, performs its share in working the final miracle, the development of an individual personality. Every experience modifies, develops, educates the rational being that receives it. Experiences can come only through the senses, and the visual sense is admittedly the most constantly used. If man, then, derives all material for growth solely through his senses, he owes the greater part of his present personality to his eyes. Therefore, belief in visual education is merely an acknowledgment of the supremacy of our supreme faculty. Natural education uses it to the full. Formal education must do the same." What instruments can it use? The pageant must have intellectual content. Lantern projections must be made truly educative. Through the window of the stereoscope the child must look on pictures which give strong outlines to vague conceptions, reality to imagination. Statistics weary the young; they become interesting so soon as they are projected on the screen in the form of graphs. It is geography, above all, that visual education can subserve. In his presidential address to the Royal Geographical Society, Sir Francis Younghusband urged that it was within the scope of geography to observe beauty in natural features, and to compare the peculiar beauties of different features with one another. Indeed, he even contended that this would become its chief function. We have heard much of the effect of climate on race; it is time to give the Seeable its place in the development of man, which can be done only through education to see.

It is sought to "unify the educational interests" of the United States—to give them, as it were, cohesion about a centre. Out of the emergency council which was called together by the institutions of higher education when America went into the War there

An "American Council on Education."

has grown a new organization, called the "American Council on Education." Sixteen great associations are represented on it, among them being the Association of American Universities, the Society for the Promotion of Engineering Education, and the National Research Council. Then there are "associate members," representing certain bodies having interests related to the work of

the Council; and there are "institutional members," universities, colleges, and technical schools which contribute a regular sum to the treasury of the Council. And its functions? It has digested the seventy educational Bills now before Congress. It will promote international relations in education. It has a standing Committee on Education for Citizenship, and another standing Committee on the Training of Women for Public Service. Its general aim will be to attain orderliness and uniformity through co-operative effort; it will seek, for example, to bring about a uniform treatment by American universities of the holders of foreign degrees.

Commercial education continues to thrive. The Bankers Trust Company demand "business missionaries" (we say commercial travellers), skilled in foreign tongues. Both divisions of the New York University School of Commerce are overcrowded. The commercial classes in Columbia University have three times their usual enrolment. English traders must look for brisk competition from America. Yet no commercial rivalry shall disturb spiritual harmony.

CANADA.

It is pleasant to observe that Canada regards practice in teaching as necessary to the making of a competent inspector. *The School* (Toronto, VIII, 9) collects particulars. Ontario requires of a candidate for the inspectorate seven years' successful experience as a teacher, of which at least five must have been in the public schools. In Quebec the inspector *in spe* must have taught for full five years; New Brunswick is content with three. In Nova Scotia the Superintendent of Education nominates as inspector the most efficient principal of the public schools in the inspectorial division. British Columbia will have none as inspectors except those who have done excellent service in the public or high schools of the province. Inspectors in Alberta must have had long and successful experience in Alberta schools; whilst Saskatchewan likewise insists on conspicuous success in the classroom as a condition of promotion from it. There was a time in England—has it passed?—when men with high honours went from Oxford or Cambridge to inspect schools utterly unlike those in which they themselves had been taught—and it was a folly or a crime to send them on such a business. *Absent studia in mores*; but they take long to make an inspector, and teachers in the past have suffered much from the fumbling incapacity of raw learning.

From New Brunswick good progress in respect of vocational education is reported. The Act of 1918 has been amended so as to give increased grants for vocational instruction; and in districts having a population of less than 2,000 the Government will now pay 75 per cent. of the teachers' salaries. The first annual report of the Vocational Board unfolds great plans for the future. A summer school for teachers and directors is to be held in July and August.

CAPE OF GOOD HOPE.

The *Education Gazette* (XIX, 26) reports extensions in connexion with the use of Afrikaans. Hitherto pupil teachers have been allowed to answer questions either in English or in Dutch or in

Afrikaans; but the language and literature papers have been only in English and in Dutch. This year, however, Afrikaans will be accepted as an alternative to Dutch as regards language papers in all years; and third year senior candidates may offer the history of the Afrikaans language and literature instead of the history of English or Dutch literature since 1880. Examination papers will be supplied in English, Dutch, or Afrikaans, as desired. The recognition of the Afrikaans language and literature as a fit subject of study is wholly commendable. Lately prizes were offered for the best national school song celebrating the past trials and present political unity of South Africa, and competitors were allowed to write in English, Dutch, or Afrikaans. The winners of both the first and the second prize wrote English. It will be a fair prognostic of that racial concord which is all that South Africa needs for her prosperity when the same theme is triumphantly treated in Afrikaans.

INDIA.

It is being seen more and more clearly that the Report of the Calcutta University Commission will have potent influence on the whole university problem throughout India. At a recent meeting of a committee to consider the reconstitution of the Allahabad University, Sir Harcourt Butler said: "Our ultimate

Higher Education—University and Medical.

ideal in the United Provinces should be to have unitary teaching and residential universities at Allahabad, Lucknow, Benares, Agra, and Aligarh. It may be, before long, that Cawnpore also will be included in this list. In order to ensure and carry out the recommendations of the Sadler Commission we shall have to face big changes. The existing institutions have done great work, but we must be prepared to sacrifice some of their present advantages for the larger educational life that is to come." We hope that it will be remembered how the impulse towards that new educational life came, in large measure, from Leeds. In connexion with higher education in India we may record briefly that medical education is being extended. In Madras the Government has decided to open a second medical college in the Presidency, whilst the Maharaja Bahadur of Darbhanga has given five lakhs of rupees for the establishment of a medical college at Patna.

UNIVERSITIES AND SCHOOLS.

WALES.

The half-yearly meeting of the Central Welsh Board was held at Barmouth, on May 28, when several important questions affecting the future of the Board were discussed. The Executive Committee in their estimates for the year 1920-21 disclosed the serious position of the Board's finances, as there is an estimated deficit of £5135, which is practically one-half of the total annual income of the Board. It is, therefore, a matter of great urgency that some means be discovered to improve its financial status, or it will be difficult for the Board to continue their work on the present scale. This unfortunate position is due entirely to increases in the fees of examiners and the rising cost of conducting examinations generally, and more particularly to the requirements of the Examinations Council in regard to the Senior Examination of the Board. Recognition of this examination has unfortunately laid upon the Central Welsh Board further responsibilities which will involve considerable expense, and it is therefore difficult to understand why the Board of Education have chosen to pay over to the Central Welsh Board only 7s. 6d. per pupil out of the total grant of £2, and most educationists will be disposed to agree with the contention of the Executive Committee that "it is only just that the local authorities should transfer a large part, if not the whole, of the examination grant, which they never expected to receive, and is partly required to supplement the inadequate income of the Board." But even if this were done the income would not be sufficient to place the Board's income on a secure footing, and it appears that this can only be accomplished by an increased Treasury contribution, as well as by an amending act empowering the Board to make increased levies on local education authorities. It is evident, therefore, that the question of finance must be faced firmly and without delay.

At the special session of the Board a useful discussion on the position of Welsh in the school curriculum was initiated by papers read by Mr. S. J. Evans, of Llangefni School, and by Major Edgar Jones, of Barry School. Mr. Evans is the head master of a school where the great majority of the pupils are, at entrance, practically monoglot Welsh-speaking pupils, while in Major Edgar Jones's district but a small percentage can speak the native language. The problem was therefore necessarily attacked from two entirely different points of view. In the Board's annual report there is also a full consideration of this question. Objection is specially taken to the practice obtaining in certain schools of making Welsh and French alternative subjects, for Welsh is a necessity in more cases for culture and business after leaving school than is French. In recent years, on the other hand, even a smattering of French was found exceedingly useful by thousands of pupils who had passed through the secondary schools of Wales, while for more advanced students the relations between Welsh literature and French literature are beginning to attract attention. There seems, therefore, to be no educational reason for making these two languages alternative. The Board make one or two tentative suggestions for meeting the difficulty, but they do not seem to be really satisfied with them, because they conclude their report by an appeal for a thorough reconsideration of language teaching in Wales, and a closer study of the problem of bilingualism in other countries.

The first meeting of the Court of Governors of this College was held on June 7, when the Council was elected. **Swansea University College.** Mr. F. W. Gilbertson was elected president, Mr. Ivor H. Gwynne and Mr. Roger Beck as vice-presidents, and Mr. W. T. Farr as treasurer. The Corpor-

ation have placed at the disposal of the College about forty-five acres in the grounds of Singleton Abbey, and it is proposed to open the Arts Section in the Abbey as soon as the necessary alterations can be effected. It is not, however, expected that it will be possible to start the Arts side until October, 1921, though provision will be made for some lectures almost immediately. For the purposes of science and technical work the premises of the present Technical College will be utilized, and, as there is already there a small nucleus of students qualified to proceed with university courses, definite progress should be possible in this direction at the commencement of the next session. The financial problem is, however, somewhat serious, and therefore great importance is attached to the decisions of the Treasury Committee on University Grants who met the Council to discuss this matter. Sir William McCormick and Sir Dugald Clark gave a sympathetic hearing to the case submitted to them by Dr. Sibly, the principal, and by the president. The probable cost, it was stated, of running the University for the first year was £17,000, and if the departments in the Faculty of Arts were added they must expect it to increase to £25,000 or £30,000, to meet which sum the College could only rely on about £5,000 or £6,000 per annum. Sir Wm. McCormick, in reply, pointed out that they had no university grants left, except for liabilities under the Prime Minister's pound for pound scheme. Further, when the committee was appointed, the Swansea University College was not in existence, so that the only way of providing the necessary funds, apparently, was to make a special appeal to the Treasury. Sir Wm. McCormick further suggested that until their plans were complete the Education Committee should relieve them of the maintenance of the Technical College building. It was only when they had become a permanent and successful institution that it was likely that the Treasury would come to their rescue, and therefore it was incumbent upon the Council to proceed as rapidly as possible with the establishment of the College. However, the chairman had no doubt that he would be able to persuade the Treasury to offer at least some help to meet the expense of the initial stages. A vigorous campaign will be instituted locally to raise further funds, and it is hoped that the appeals will be generously responded to in order that the development of the College may not be retarded.

The University Senate has approved a recommendation of the Secondary Schools Joint Committee that a candidate not taking Latin may take Welsh in place of French or German with dynamics or its equivalent, though the recommendation cannot become operative until it has been adopted by the University Court.

We learn that the dispute between the counties of Glamorgan and Monmouth over the maintenance of the Lewis School, Pengam, and the Girls' Intermediate School, Hengoed, has been adjusted, though the terms of agreement have not been disclosed.

Pengam Schools. Mr. E. Drew, Assistant Registrar at the University College, Cardiff, has been appointed as the first Registrar of the new University College, Swansea.

Appointment.

SCOTLAND.

The Sectional Congress held by the Educational Institute at Edinburgh, on June 5 and 6, was a striking success. Throughout the proceedings the meetings were well attended, some of them to overflowing, and debate was keen and earnest. If refutation was needed of the gibe that teachers turn out in big numbers only to discuss salaries, it was forthcoming in the sixteen meetings of the Congress. There are still a good many Scottish teachers who would like more money than they are getting, but one would never have suspected it from anything said or done at Edinburgh. Everybody seemed too much occupied with education to have time to think about such mundane matters!

The Congress opened with a conference on the training of teachers, with Dr. Boyd, the president-elect, in the chair. The meeting had before it a series of proposals for the reform of the present system, which had been drawn up by a committee of the Institute in conjunction with the teacher members of the four Provincial Committees. These proposals were decidedly revolutionary, though, as a matter of fact, most of them were set forth explicitly or implicitly in the Reform Committee's report. They suggested the abolition of the junior student and the postponement of entry into training till after the Leaving Certificate, and they denounced all special maintenance allowances given as bribes and involving obligations not imposed on entrants to other professions. They called for an end to be made to the two-years' course and proposed

(Continued on page 468.)

Complete List, including the Higher School Certificate Examination, free on application.

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C. 2.

that every teacher in training, whether for the General Certificate or for special subjects, should spend at least three years in acquiring a degree or an equivalent diploma, and proceed in the following year to specific professional training. Another point worthy of note was the insistence on greater freedom and greater leisure for both lecturers and students as a means of changing the spirit of the training colleges. With most of this programme the Conference was in substantial agreement. Specially interesting was the emphatic pronouncement of the teachers of domestic science, manual training, and art in favour of fixing a high preliminary qualification and raising the standard of the training to a graduate level. The only point on which there was any serious division of opinion concerned the age of recruitment. A surprisingly large number of speakers wanted to get boy and girl candidates started to some practical teaching work alongside their studies for the Leaving Certificate, though protests against premature training were not wanting. One was rather reminded at times of the stock arguments for half-time schooling. It remains to be seen what the judgment of the profession is on this matter. It will probably be found that teachers as a whole are in no hurry to rush their pupils into training.

A large audience assembled in the hall of Moray House on the Saturday morning. The attraction was a double one. Sir Donald Maclean, who enjoys the esteem of Scotsmen without respect to

Music in the Schools.

party, gave an address that began with the rather obvious and ended on a fine strain of idealism. It was in effect a call to teachers to rise to the possibilities of their high calling in the making of a new world. Then followed a wonderful address on "Music in the Schools" by Mr. Hugh S. Robertson, of Glasgow. It was rich in practical hints, backed with the authority of one of the best conductors in Scotland; and through it all a sparkling humour and an incidental philosophy of life which made it a delight even for those in no way interested in questions of the technique of musical teaching. And how can one do justice to the performance of the children's choir which was present to illustrate the address? The choir was one of the best of those splendid co-operative choirs which the musical festivals have encouraged and developed, and to most of those present its singing under the leadership of a lady teacher came as a revelation of what music can mean. Its execution of a wide range of songs was almost uncanny in its excellence. Many teachers were left asking themselves what they had in their teaching repertoire that could lay hold on the souls of their young charges as music so obviously did in this case.

In all, fourteen sections met in the afternoon to discuss the papers which had appeared in the *Educational Journal* a week before. The first group included art, classics, educational beginnings,

The Sections.

geography, handwork, history, and mathematics. The second group, meeting at a later hour, included domestic science, elementary work, English, modern languages, physical education, science, and special schools. It is impossible to say more about them than that they all dealt with definite practical problems, that they were all well attended, and that they all reported a good discussion. Considerable doubt was felt beforehand in some quarters regarding the wisdom of holding a congress of this type, but the consistent success of the meetings has amply justified the experiment. It may be taken for granted that an annual Sectional Congress will from this time forward be a regular part of the Institute's activities.

At the opening meeting of the Congress a resolution deploring the delay in putting into operation those sections of the Education Act relating to the extension of the school age and the institution of day continuation classes was passed with

Rural Continuation Education.

unanimity. In spite of a widespread dissatisfaction with the failure of the Government to fix an appointed day for the lengthening of school life, there is no evidence that anything is being done in this direction. The schools which must be built are not being built, and the teachers who must be trained are not being trained. The signs are rather more promising in the case of the continuation schools. The Department have just issued a circular urging the authorities not to await the introduction of compulsion but to prepare the way by taking action on voluntary lines. The whole question of the future organization of the schools, they are informed, has been referred to the National Advisory Council for investigation and report. Meanwhile they can do much that will make the later steps easier. So far as urban areas are concerned, the tradition already established is sufficient guide in most cases. The rural problem is admittedly more difficult. But the Department have been in consultation with the Board of Agriculture for Scotland, and have various suggestions to make to ensure that

(Continued on page 470.)

MCDUGALL'S

A SCHOOL ATLAS—REVISED TO 1920

GINN & COMPANY

PLEASE NOTE NEW ADDRESS:

7 QUEEN SQUARE, SOUTHAMPTON ROW, LONDON, W.C.1.

The new premises, which are within easy reach of the British Museum, University College, The London Day Training College, The College of Preceptors, &c., include a reading room wherein are exhibited copies of all Ginn and Company's publications. Members of the teaching profession and others interested are cordially invited to call and inspect these. The publishers are always glad to forward books on approval to teachers.

instruction in agricultural subjects shall be both practically and theoretically sound. In particular they indicate that the services of the staffs of the three agricultural colleges will be at the disposal of the authorities either for the purposes of consultation or for the purposes of instruction. It is a good omen for the success of these plans for the extension of continuation education in rural areas that the farmers seem to be beginning to take an interest in the matter themselves. The Highland Society has had a conference on the whole question of agricultural education, and has reached much the same conclusions as those implied in the Departmental Circular.

A draft minute of the Committee of Council on Education in regard to grants to be paid to education authorities for the coming year prepares the way for a change almost as far reaching as the change from payment by results to payment by attendance. The basis of grant is to be the needs of the authorities as measured by the number of pupils and of teachers. The main grant of not less than four million pounds is to be distributed among the education authorities as regards one half proportionately according to the number of pupils in each area and as regards the remaining half proportionately according to the number of teachers. The remainder of the grant is to be disbursed in such ways as to meet special conditions. There will be a grant based on expenditure and valuation, a grant in respect of small schools, additional grants for the Highland counties, and (most notable of all) a grant of £75 in respect of each fully qualified teacher in excess of the number of teachers required to staff the schools on the standard of thirty-six pupils per teacher, which is the present average number of pupils per teacher. With the present scheme will disappear the worrying preoccupation with attendance which tended to convert a high average of attendance into one of the ends of educational administration instead of keeping it a mere means to scholastic efficiency. But the Department do not wholly give up their powers of control. They retain the right to reduce the figure of average enrolment in any case where the percentage of average attendance falls appreciably below the standard of average attendance in the same district. In more serious cases where an authority is at fault in regard to regularity of attendance, efficiency of instruction, and sufficiency of educational provision, the grant may be reduced as seems good to the

Department. If, however, the grant is reduced by more than £500 or by the amount that would be produced by a rate of one penny in the pound, the reasons for deduction must be reported to Parliament by the Department. Regarded as a whole, the scheme is wisely conceived. It is a tribute to the faith which the Department have in the new authorities.

IRELAND.

The crisis in Irish education still continues. How serious it is may be seen from three facts which have marked the past month. First, the Intermediate Board have issued in the public press the following resolution passed by them unanimously at their meeting on May 26:—"That, in view of the present crisis in Irish secondary education arising from the inability of the schools to provide for teachers a salary even approaching the necessary minimum, and the consequent danger of a general failure in the supply of secondary teachers in Ireland, the Board urge insistently upon the Government the pressing necessity of an immediate additional grant to enable the schools to augment the salaries of assistant teachers. Further, the Board hold it just, as well as pressingly necessary, that the sums announced in Parliament to be available for Irish education as the equivalent of the additional grants voted for education in Great Britain during the past two years and the current year, should forthwith be applied to Irish educational purposes, without prejudice to future legislation." In a memorandum accompanying this resolution the Board point out that, according to the last report of the Teachers' Salaries Grant, of 1,349 lay teachers only a hundred were receiving £200 or upwards per annum, and of these thirty-one were heads of schools, while about 30 per cent. of all the teachers were receiving less than £100 per annum. The teachers are in a state of the direst poverty and are quite unable to make ends meet on their inadequate salaries, while the schools cannot get fresh teachers and, in many cases, cannot even retain the services of their present teachers, although, in order to raise salaries, many of them have run into debt. Since 1918 secondary education has not received one penny as the corresponding equivalent of the large increases made for secondary education in England, although it was categorically promised. The sum now due is £140,000 a year.

(Continued on page 471.)

CHAMBERS'S LIST

38 SOHO SQUARE, LONDON, W.1.
339 HIGH STREET, EDINBURGH.

MACHINE DRAWING AND SKETCHING

By JOHN H. DALE, A.M.I.M.E. Quad. Hons., Bronze Medallist, Winner of King's Prize in Machine Drawing, formerly Lecturer in Engineering at the Darlington Technical College, now Head of Engineering Dept., Technical Institute, Sheerness. 3s. 6d. net.

The book is intended for the use of students of about the fourth and fifth years of a Technical Course. It contains 84 machine drawing examples, most of which are presented in the pictorial. Each example is complete in itself and, with the necessary homework, is estimated to occupy one class-night. There are also 200 sketches of machine details and 190 questions on sketching, numerical calculations, and workshop practice.

CHAMBERS'S PERIODIC HISTORIES

Thoroughly up to date.

In this series due prominence is given to the development of social life; the progress in arts and crafts; the advancement of learning; the great struggles for religious and political liberty; the growth of the constitution.

"It furnishes all that the schoolboy wants, and deserves the same popularity that the larger work has obtained. It is a thoroughly sound and scholarly dictionary."—*The Journal of Education*.

GASC'S LITTLE GEM DICTIONARY. By MARC CEPPI.

Narrow 8vo. 137th Thousand. Cloth, 2s. net.

Carefully adapted from M. Gasc's large 8vo Dictionary, which is generally acknowledged to be the best English Lexicon of the French Language. Issued in very handy form, and will be found particularly suitable for use in Junior Classes.

M. Gasc's French Dictionaries are widely recognized as having no equal in their own field.

G. BELL AND SONS, Ltd., York House, Portugal St., W.C. 2.

The second fact is the serious unrest among the secondary teachers culminating in a strike in a large number of schools. The unrest was shown in all schools, both Catholic and Protestant, particularly in the former. The Association of Assistant Masters, a Catholic body, affiliated itself with the Transport Union and made certain demands on the head masters. At the last moment a strike was declared off, except in the Christian Brothers' schools and some others, but in most of the Catholic schools an agreement was reached that registered assistant masters should receive £235 for the year, and unregistered assistants £35 increase on present salaries. It cannot be said that this is an adequate wage for a fully qualified full-time teacher, and the settlement is probably but temporary. In the Christian Brothers' schools the strike lasted for three weeks and was then settled on the same terms. The Christian Brothers stated that they had no funds to provide increases, and in the end this statement was accepted by the assistants, but the authorities promised to appeal to the parents and those interested in the schools to make up the necessary amount. The Protestant assistants put forward a request for an increase of 75 to 100 per cent. on 1915 salaries, and in most Protestant schools have received substantial increases. But, as the Intermediate Board have stated, many teachers have left Ireland and others are leaving this summer, and Irish education, whatever the Government may do now, has received a serious blow, and quite unnecessarily, because the Government, with its eyes open and after repeated warnings, continued to postpone a decision.

Even at the time of writing no decision has been made known, but the third fact is that the new Chief Secretary has expressed sympathy with the secondary teachers and a desire to do something for education. He has received deputations in reference to the Education Bill and the state of the teaching profession, and has declared that the only word to describe the condition of secondary assistant teachers is "pitiable." He has affirmed his determination to do his best, whether the Bill passes or not, to improve their condition by a Government grant, and everyone in Ireland has been eagerly waiting to hear the amount and the method of distribution. Time was of the essence of the problem, but has been neglected; and many schools, probably a majority, afraid to risk the expenses of the coming session on their present income, have decided to raise their school fees. In Ireland, where education is the more needed, fees will be at least double what they are in the corresponding secondary schools under the Board of Education in England.

What about the Education Bill? Nothing official has been stated. The Chief Secretary has said that the Government will not attempt to pass a contentious Bill. Therefore the present Bill will have to be altered. Will it be? Statements on good authority have been made that the Roman Catholic bishops have agreed to modify their uncompromising attitude towards the Bill, while, on the other hand, the Government no longer maintain the rigid determination of Mr. Macpherson to pass the Bill as it is, or not at all. It is stated that the compromise chiefly affects the composition of the proposed new Department of three members, one the Chief Secretary, the second the Vice-President of the Department of Agriculture and Technical Instruction, and the third an expert member to be nominated by the Lord-Lieutenant, and in place of this should be substituted a single Board similar to the present National and Intermediate Boards, on which all the different religious and educational interests of Ireland could be fairly represented. If this be so, the present Bill would require to be withdrawn and a new Bill substituted; but being an agreed Bill it could be passed quickly and without difficulty.

On Trinity Monday a new Fellow, Mr. C. H. Rowe, mathematical student, was elected for Trinity College. His election makes a definite break with the past. The old examination for fellowship, suspended during the war, has now been abandoned for good, and fellows are to be elected on a new principle. The examination system practically limited the choice to classical and mathematical men, but with the new system a wider choice is possible. It may be that it will exclude some who would become scholars of the highest rank, but it should ensure that the fellows will all be competent teachers. The proposal is to appoint, according to the needs of the College, a number of lecturers to hold office for three years. Their salaries will not be large, but after two years they will be eligible for fellowship, and from their number the fellows are to be chosen. There will still be an examination, but other factors will be considered in the election. As the lecturers under this scheme will go out of office, unless elected to the fellowship,

(Continued on page 476.)

THE EFFICIENT AND SUCCESSFUL CORRESPONDENCE COLLEGE.
(FOUNDED 1889.)

THE NORMAL CONVERTS YOUR STUDY INTO A UNIVERSITY.

Founded nearly thirty years ago by teachers for teachers, the Normal stands to-day a monument to the fact that at its inception it was based upon right principles and built on sound methods. The Normal has stood the test of time, and is firmly established as the most reliable Correspondence College. The keystone of the Normal is the concentration of the efforts of most highly qualified and experienced Tutors on the requirements of the individual student. Thus the Normal converts your study into a University.

after three years, there will always be a fresh supply of candidates from which to choose. The scheme is original and seems likely to work well. In addition to the fellow a large number of new scholars were elected in classics, modern languages, mathematics, and experimental science. It is noteworthy that only one scholarship was given for mathematics.

Resignation of Mr. Gill. Mr T. P. Gill, who has been Secretary of the Department of Agriculture and Technical Instruction since it was founded over twenty years ago, has intimated that he is about to resign. There is no

doubt as to the effectiveness of the Department's work in Ireland in promoting the teaching of experimental and technical science all over the country in schools of every kind, and Mr. Gill's name will always be honourably connected with this far-reaching development, and, although the full effects of it will not be seen for some years, enough has already become apparent to form a very striking memorial to his work, which is still growing. At the sixteenth annual congress of the Irish Technical Instruction Association, at Larne last month, he stated that a greater number of pupils had entered technical schools in Ireland this year than ever before. At present there were 60,000 students, or 10,000 more than last year.

Albert Agricultural College. The Department has issued its prospectus of the Albert Agricultural College, Glasnevin, for the session 1920-21. It provides courses of instruction for farmers and for gardeners, including a course

for farm apprentices. The session extends over ten months, commencing in October and ending in August. Students must be between seventeen and thirty years of age, and must qualify for admission by passing an entrance examination. The fees are: for farmers' sons, £15; for others, £50. Farm apprentices are admitted without fees. The Department also offers a limited number of scholarships for young men who desire to acquire a thorough knowledge of technical agriculture, and one or more scholarships for students specializing in horticulture, forestry, or creamery management. Each scholarship includes free admission to the Royal College of Science and free board and residence at the Albert Agricultural College. Scholarships are, in the first instance, for one year, but may be extended for two, three, or four years.

The Lord-Lieutenant has approved of some additional regulations for the Register of Intermediate School

The Register. Teachers in Ireland. For three years from August of this year the certificate in the Theory

and Practice of Education of the Royal College of Science for Ireland, and the certificate in the Practice and Theory of Education of the Clongowes Wood College, Co. Kildare, will be accepted as approved qualifications as training in teaching; and the first-named may be accepted as an approved qualification before August 1. As regards the specified number of hours of actual teaching required under the temporary conditions of registration, a less number than three hundred hours per year may be accepted provided that the applicant has taught for the total number of required hours within a period extending over not more than five consecutive years. This only holds good up to July 31 of this year. The Intermediate Board are also given power to allow a certain relaxation in the number of weeks and hours of teaching in case of epidemics.

National University of Ireland. The National University of Ireland has issued a notice that candidates for matriculation wishing to matriculate on the results of the Senior Grade Examination of the Intermediate Board, held in the latter half of June, should enter provisionally for the Autumn Matriculation, pending the publication of the results of the Intermediate Examinations. The latest day for entry is August 12 (or with late fee August 19). No student can begin his course of lectures leading to degrees in the University until he has completed his matriculation, nor will he be admitted to any recognized college of the University until he has done so. Students who wish to be excused from matriculation on the results of outside examinations should apply to the Registrar of the University for Certificates of Matriculation.

SCHOOLS.

SEDBERGH SCHOOL.—The following scholarship awards have been made:—To a scholarship of £90—C. G. Trapnell (Messrs. Clarke & Conway, Matlock). To the Bernard Wilson scholarship—A. H. Laurie (Messrs. Campbell & Reece, Westgate-on-Sea). To scholarships of £70—S. H. Brookfield (Mr. Hawthorn, Parkfield, Liverpool), H. M. Lattimer (Mr. Lattimer, Barnet), H. Luson (Mr. Duckworth, Weston-super-Mare). To a honorary scholarship—D. M. Campbell (Mr. Gardiner, Moffat). To a scholarship of £50—T. S. M. White (Mr. Carey, Kilkree). To scholarships of £30—T. M. Chadwick (Messrs. Lynam, Oxford), C. W. R. LEEDS and GLASGOW.

Important Notice Concerning School Maps.

As a result of extensive experiments during the last seven years we have succeeded in producing School Maps that are a vast improvement on all that have gone before, not only as regards a far more attractive method of presenting information, but we are fitting them with a patent adjustment that makes their use a pleasure and increases their life a hundredfold.

These School Maps will be ready in time for the Autumn term, and, as we are expecting a huge demand, we are printing large editions to enable us to supply these new and improved maps at a very much lower price than that ruling for School Maps at present.

The Maps will be issued in two sizes, 42"×32" and 64"×42" respectively. Prospectus containing further particulars and prices will be available shortly.

We have no hesitation in saying that these Maps will revolutionize the School Map trade, and you will be well advised not to commit yourself to any other School Maps until you have seen ours. Specimen copies will be sent on approval, carriage paid, and to secure early specimens school authorities and masters are invited to apply at once, stating at the same time the name of the countries or continents, and of which of the above sizes copies on approval will be required.

A great variety of School Atlases and Globes are also in preparation.

All inquiries to be addressed to—

"GEOGRAPHIA" Ltd., 55 Fleet St., London, E.C.4.

THE "NEW ERA" GLOBES.

These are small rubber Globes suitable for distribution round the class. Cheap, durable, and attractively coloured, they aim at supplying a long-felt want. A series is being prepared, including Globes showing Orographical Features, Political Divisions, Temperature, Rainfall, Vegetation, and Routes of Explorers. All particulars to be obtained from—

Miss E. M. WALTERS, F.R.G.S.,
71 and 84 Goldstone Villas, HOVE.

Particulars of this year's

SUMMER SCHOOLS

will be found on pages 427, 432, 433, and 434.

All Persons interested in Phonetics are recommended to join the
INTERNATIONAL PHONETIC ASSOCIATION.

Subscription 8s. per annum. Entrance fee 4s.

Members receive free of charge *Le Maître Phonétique*, the official organ of the Association (Editor: P. Passy, 20 Madeleine, Bourg-la-Reine, Seine, France; Assistant Editor: D. Jones, University College, London, W.C.1)

New Members receive in return for the Entrance fee: *The Principles of the I.P.A., What is Phonetics?* by H. E. Palmer, and *La Phonétique appliquée à l'Enseignement de la Lecture*, by P. Passy. — List of other publications and prices of back numbers of *Le Maître Phonétique* (from 1899) on application.

 The "New World" Series.—The Way of Poetry. By J. Drinkwater. *Collins*. 2s. 6d. net.

MISS CLARISSE SPEED, special visiting lecturer in music to the London County Council evening institutes, has arranged to give a series of lecture-concerts specially designed for London schools, training colleges, and evening institutes. The first is to take place on Saturday afternoon, November 27, in the Kingsway Hall.

CAMBRIDGE DEGREE IN HORTICULTURE.—One of the problems at present confronting the Ministry of Agriculture is the provision of advice and supervision for the smallholder. This problem has become more acute now that so many of the men settling on the land are lacking, either partly or altogether, in knowledge of the theory and practice of horticulture. A man who is to organize the horticultural instruction of a county should have a knowledge of the scientific side of the subject as well as of its practical side. Hitherto such knowledge has not been easily obtainable. While we have excellent schools of agriculture in various parts of the country, we have at present no school definitely devoted to the study of commercial horticulture. In view of the rapidly increasing importance of horticulture in this country, the prospective fruit farmer or market gardener should be able to obtain instruction in his subject as scientific and comprehensive as that which can be obtained by the prospective agriculturist. In order that such instruction may be available, the Ministry of Agriculture have made it possible for the University of Cambridge to establish a degree in horticulture and a post-graduate diploma. The course for the degree will extend over three years, and will consist of instruction in the theory and practice of commercial fruit and vegetable growing, the practical side of the subject being treated no less fully than its theoretical aspect. Both the courses mentioned above will commence in October next, and information concerning them can be obtained from the Secretary, School of Agriculture, Cambridge.

BELL'S LATEST MATHEMATICAL BOOKS.

ELEMENTARY ALGEBRA, Part I. [Now ready.]

By CLEMENT V. DURELL, M.A., Senior Mathematics Master, Winchester College; and G. W. PALMER, M.A., late Master of the Royal Mathematical School, Christ's Hospital. With Introduction and Full Answers. 4s. 6d. Without Introduction and with Answers only where intermediate work is required. 3s. 6d. Answers separately. 1s.

[Cambridge Mathematical Series.]

The authors have assumed that discussions in the text are rarely of value to the ordinary boy, and cannot replace oral instructions. In the text will therefore be found only a few simple cautions, some definite rules, and a number of illustrative examples. The first part covers the usual course up to and including quadratic equations.

BUSINESS ARITHMETIC. A First Year Course.

[Now ready.]

By C. PENDLEBURY, M.A., F.R.A.S., formerly Senior Mathematics Master at St. Paul's School; and W. S. BEARD. Crown 8vo. With or without Answers. 3s. 6d.

Suitable for students who may be preparing for a business career.

ARITHMETIC, Part II.

[Now ready.]

By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Crown 8vo. 3s. 6d. Part I (now in its Third Edition). 3s. 6d.

[Bell's Mathematical Series.]

This book covers the ground required for the new combined syllabus of the School Certificate and Army Examinations, and deals in some detail with Mensuration and Logarithms. There is a large selection of Revision Papers dealing with the various subjects in turn.

A FIRST COURSE IN THE CALCULUS, Part II.

[Ready shortly.]

By W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. 5s. Or, complete with Answers, 8s. 6d. Now ready, Part I, Second Edition. 4s.

[Bell's Mathematical Series.]

Part II deals with the processes of Integration in their application to Areas, Volumes, Centres of Gravity, Moments of Inertia, and Centres of Pressure.

A CONCISE GEOMETRY.

[Ready shortly.]

By CLEMENT V. DURELL, M.A. Crown 8vo. 4s. 6d.

[Cambridge Mathematical Series.]

In this new book the number of propositions is limited to the smallest amount consistent with the requirements of the average examination. The propositions are printed consecutively, but the proofing of the theorems has been reduced to a minimum. There are a large number of rider examples and constructive exercises grouped according to the blocks of propositions.

AN ELEMENTARY TREATISE ON DIFFERENTIAL EQUATIONS, and their application.

By H. T. H. PIAGGIO, M.A., D.Sc., Professor of Mathematics, University College, Nottingham.

[Now ready. Demy 8vo. 12s. net.]

The earlier chapters contain a simple account of ordinary and partial differential equations, suitable for those with no previous knowledge of the subject, while the later chapters cover the course for the Cambridge Mathematical Tripos, Part II, Schedule A, and the London B.Sc. Honours.

PRIZE COMPETITIONS.

THE prize for the June competition is awarded to "Newman Nogs"; *proxime accessit*, "F.W.M."

The winner of the May competition is Miss E. M. T. Parsons, Notting Hill High School, W.11.

Extracts from Montesquieu's "Esprit des Lois."

By NEWMAN NOGS.

A new disease has pervaded Europe; it has seized upon our princes, and is compelling them to maintain an inordinate number of troops. It is liable to paroxysms, and inevitably spreads its contagion, for, no sooner does one State increase what it calls its troops, than the others straightway increase theirs, so that the only result attained thereby is universal ruin. Every monarch keeps as many standing armies as he would have if his subjects were in danger of being exterminated; and this tense condition of general hostility goes by the name of peace. Accordingly Europe is in such a crippled state that private individuals who happened to be in a similar position to that of the three wealthiest powers in this part of the world would not have sufficient for their subsistence.

Among the Chinese races village folk behave as ceremoniously to one another as those in an exalted station; such a custom is well adapted to engender a kindly disposition, to maintain a spirit of harmony and discipline among the lower classes, and to eliminate all such blemishes as are inherent in a churlish nature. Indeed, is not emancipation from the conventions of civilized society an attempt to find a means of giving freer scope to one's bad qualities? Good breeding is of more account in this respect than polished manners. The latter humour the vices of others, while the former prevents us from making our own too conspicuous; it is, as it were, a barrier that men erect one against another to preclude them from exercising a pernicious influence.

Vanity is as good a motive force for a government as pride is a dangerous one. To prove that, one has merely to picture to oneself the innumerable benefits which spring from vanity. From it arise wealth, industry, the arts, the fashions, good taste and manners, and, on the other hand, the countless ills which owe their origin to the pride of certain nations: idleness, poverty, general neglect, the destruction of nations that fortune has placed in their power as well as of their own. Idleness is the result of pride; work is a consequence of vanity; the pride of a Spaniard will make him refuse to work; the vanity of a Frenchman will make him able to work better than the rest.

Female society corrupts the manners, but promotes good taste; the desire to excel one's neighbours in attractiveness is the origin of finery; and the desire to excel oneself in attractiveness is the origin of fashion. Fashion is a matter of importance; by bringing your mind to regard things in a frivolous aspect, you immeasurably increase the branches of your commerce.

The extracts from Montesquieu contained some *pontes asinorum*, over which even the elect did not always pass successfully. *La civilité* is "ceremoniousness" or "observance of etiquette"; *politesse*, "politeness" or "the desire to please." *Sommier*, in his dictionary of French synonyms, defines the words thus: "*La civilité* consiste dans un cérémonial de convention; *la politesse* consiste non seulement à ne rien faire et à ne rien dire qui puisse déplaire aux autres, mais encore à dire et à faire ce qui leur plaise," and he adds that, while an uneducated man may observe *civilité*, *politesse* is the monopoly of good breeding. Between "courtesy" and "politeness," the favourite pair of words, we are not clear that there is a substantial distinction. *L'industrie*, in spite of the almost universal opinion of the competitors, prize-winner included, we take to mean "manufactures" or, more widely, "production" or "productivity." *L'abandon de tout* is "general neglect," "universal negligence." The last fence was the worst; only a minority saw the meaning of "*l'envie de plaire plus que soi-même*." Perhaps the neatest rendering for the sentence which we had was "The desire to surpass others is the origin of finery, and the desire to surpass one's self is the origin of fashions." The idea, of course, is that, when the fashion changes, the individual changes. "The desire to please more than one's self" was very common. Do the words possess any meaning? For the last sentence we suggest a free rendering: "Fix your mind on frivolities and your business will throw out new shoots every day."

The student of Montesquieu has to be continually reading

between the lines. In the last extract he is satirizing the women of his day. To understand his poor opinion of them, one must remember that the "Esprit des Lois" was published in the middle of the eighteenth century, when French aristocratic society was at its worst. In the third extract he is contrasting France and Spain, and half congratulating, half ridiculing, his fellow-countrymen. It is a little difficult to understand the reference to the "trois puissances les plus opulentes" in the first passage. In 1750 Great Britain, Holland, and France were the richest countries in Europe, but neither of the two former was overburdened with military establishments.

We classify the 94 versions received as follows:—

Class I.—(a) Newman Noggs, F.W.M., Emile, Brawney, Esse quam videri, Shax, Homunculus, Margot, Cicestrian.

(b) Q.C., Frog, Hillbrow, Nibbidard, Bésigue, Para, Plover, Galloise, Primrose, Spion Kop, Menhir, Nihil, Karenza, Undismayed, Imo, W.G., Kerenhappuch.

Class II.—Mrs. Gilbey, Zephyr, Mike, Constance, Sylvette, Erindale, Puella, Dizzy, Leander, Chingleput, Fifi, Goo McTort, Tregorrick, 13, Studiosus, W.D.M., Cuckoo, Tredawl, Gadfly, Tudor, Noémi, Hippodamia, Max, Borderer, F.M.P., Purbeck, Will o' the Wisp, Hong Kong, Imrie, Yorkshire Lassie, Midner, Jane, Mariposa, Saton, Jolande, Lois, L.S., Jemima, A.P., Straford.

Class III.—Job, Eschscholtzia, Asterium, Shah, Rippingale, Grammar, John, Desmond, Neptune, Horace, C.L.C., Opal, A.J.N., Trèfle, Mimi, Coney Hatch, D.I.M., Keziah, Ray, M.K.R., Jumbo, Grain of Dust, Archaic, Jeannette.

Class IV.—F.W.B., Jeanne d'Arc, T.S.U.P., Cosima.

A Prize of Two Guineas is offered for the best translation of the following extracts from one of Paul-Louis Courier's letters, written in 1806, when he was serving with the French Army in Italy:—

Pour peu qu'il vous souviennne, madame, du moindre de vos serveurs, vous ne serez pas fâchée, j'imagine, d'apprendre que je

suis vivant à Reggio, en Calabre, au bout de l'Italie, plus loin que je ne fus jamais de Paris et de vous, madame. Pour vous écrire, depuis six mois que je roule ce projet dans ma tête, je n'ai pas faute de matière, mais de temps et de repos. Car nous triomphons en courant, et ne nous sommes encore arrêtés qu'ici, où terre nous a manqué. Voilà, ce me semble, un royaume assez lestement conquis, et vous devez être contente de nous. Mais moi, je ne suis pas satisfait. Toute l'Italie n'est rien pour moi, si je n'y joins la Sicile. Ce que j'en dis, c'est pour soutenir mon caractère de conquérant; car entre nous, je me soucie peu que la Sicile paie ses taxes à Joseph ou à Ferdinand. Là-dessus, j'entrerais facilement en composition, pourvu qu'il me fût permis de la parcourir à mon aise; mais en être venu si près, et n'y pouvoir mettre le pied, n'est-ce pas pour enrager? Nous la voyons en vérité, comme des Tuileries vous voyez le faubourg Saint-Germain; le canal n'est ma foi guère plus large, et, pour le passer, cependant nous sommes en peine. Croiriez-vous que ce peu d'eau salée nous arrête? . . . Mais pas une seule barque, et voilà l'embarras. Il nous en vient, dit-on; tant que j'aurai cet espoir, ne croyez pas, madame, que je tourne jamais un regard en arrière, vers les lieux où vous habitez, quoiqu'ils me plaisent fort. Je veux voir la patrie de Proserpine, et savoir un peu pourquoi le diable a pris femme en ce pays-là. Je ne balance point, madame, entre Syracuse et Paris; tout badaud que je suis, je préfère Aréthuse à la fontaine des Innocents.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than once during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on July 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

Posts Wanted—continued.

These School and Teachers' Advertisements are continued from page 485.

FRENCH MISTRESS requires post in September. Brevet supérieur. Diplôme de fin d'Etudes Secondaires. Five years' experience of French teaching in English Schools. Direct Method; Phonetics. Excellent testimonials and references. Mlle Ducons, Caledonia, Cooden, Bexhill-on-Sea, Sussex.

ART MISTRESS (experienced) requires post. Art Master's Certificate (Drawing, Painting, Design, &c.). Embroidery, Wood-carving, Needlework, Stencilling, &c. Preparation for Royal Drawing Society's Examinations, Cambridge Locals, &c. Address—ART, 14 Albert Street, Shrewsbury.

Posts Vacant—continued.

TO THOSE INTERESTED IN THE SOCIAL AND EDUCATIONAL PROBLEMS OF TO-DAY.

KENT EDUCATION COMMITTEE.

The services are required by the Kent Education Committee of Men and Women of good education as TEACHERS in Day Continuation Schools. These schools will be centres of many-sided interest. Their aim will be to provide the means for the working boys and girls who attend them to obtain a fuller measure of education, both in their individual and their social capacity. These young persons will be engaged in a variety of occupations, and consequently experience gained in social work, or in occupations or professions affording an insight into the problems which affect young wage-earners, will be of great value to teachers in Day Continuation Schools.

The Kent Education Committee offer a limited number of Exhibitions to enable men and women to be trained for service in Day Continuation Schools. Successful applicants will be required to undergo a year's course of training, during which they will receive a substantial maintenance allowance, in addition to the fees of the institution in which they are trained.

Applicants should not, generally speaking, be less than 25 years of age. Forms of application (to be returned by July 5th), with the conditions of appointment, may be obtained by sending a stamped addressed foolscap envelope to

E. SALTER DAVIES,

Sessions House, Maidstone, Director of Education.

KENT EDUCATION COMMITTEE.

Messrs. GRIFFITHS, POWELL & SMITH,

Educational Agents (Estd. 1833),
12 & 13 HENRIETTA STREET, COVENT GARDEN, LONDON, W.C.2.

Telegraphic Address:
 Scholasque, Westrand,
 London.

SCHOOL TRANSFER DEPARTMENT.

Telephone:
 Gerrard 7021.

Schools transferred and valued. No charge whatever will be made to vendors of Schools or School Partnerships by Messrs. GRIFFITHS, POWELL & SMITH unless a sale is effected or agreed upon. No commission charge whatever made to Purchasers of Schools or School Partnerships.

Applications from intending purchasers are solicited for the following properties:

GIRLS'.

Sussex (Seaside).—Transfer or Partnership. High-class Boarding and Day School for Girls with Kindergarten Department. Established since 1883 and conducted by vendor 6 years. Gross receipts past year £2,500. Net profits past year £725. Rent of very fine house standing in its own grounds, garden, net ball and play ground, held on lease, £410. Number of Boarders 9, paying 96 to 111 guineas per annum. Number of Day Pupils 21, paying £4. 4s. to £8. 8s. per term, without extras. Price for goodwill, £1,500. School furniture at valuation. Half share could be had for about £750.—No. 7,129.

West of England.—High-class Boarding and Day School for Girls. Established and conducted by vendor 13 years. Gross receipts past year, £2,000. There are 17 Boarders paying from 60 to 75 guineas per annum, according to age, and 30 Day Pupils, paying 4 to 5 and 7 guineas per term. Rent of one house, £35. Price for goodwill by arrangement.—No. 7,126.

Channel Islands.—Boarding and Day School for Girls. Gross receipts past year, £500. Net profits past year, £280. Rent of very fine house, with large and well ventilated rooms, 1 year of lease to run, but could be renewed for 3 years on same terms, £60. There is 1 Boarder paying £2

per week and 60 Day Pupils paying from £1. 10s. to £3. Price for goodwill, £350. School furniture, £50; part of household furniture, £150.—No. 7,131.

Sussex (Seaside).—Girls' Boarding and Day School. Established and conducted by vendor 32 years. Gross receipts for past year £1,800. Number of Boarders 24, paying £60 per year, and 24 Day Pupils, paying £15 per year. Goodwill by arrangement. School furniture at valuation. Rent of house, including taxes, £146. We have known the school for several years.—No. 7,118.

Lancashire (Seaside).—High-class Boarding and Day School for Girls and Small Boys. Established 30 years and conducted by vendor 10 years. Gross receipts for past year, £2,329. 14s. 8d. Net profits past year, £526. 4s. 9d. Number of Boarders 17 and 43 Day Pupils, bringing in about £500 per term. Rent of large house, containing 11 bed rooms, 11 sitting and school rooms, 2 bath rooms, kitchen, &c., £130. Held on 12 years' lease ending September, 1920. Price for goodwill about £1,000. School furniture £350. Household furniture at valuation. There is a hostel next door which is also for disposal. Vendor states that she paid £650 for goodwill 10 years ago. On accounts examined by a well-known chartered accountant then, there were only 27 pupils paying about £340 per term.—No. 7,137.

BOYS.

Kent.—Boys' Boarding and Day School. Established many years. Gross receipts past year, £4,000. Number of Boarders, 70, terms average 50 guineas per annum. Number of Day Pupils, 10, terms average 21 guineas per annum. Extras about £300 per annum. Rent £80 per annum—11 years of lease still to run. Price for goodwill, £1,350. Household, private, and school furniture, £2,000. Total for the whole place, £3,350—£2,000 to be paid down and the balance by instalments.—No. 8,049.

London, S.W.—A client of ours who has an old-established School in a good residential neighbourhood in the south-west of London is prepared to sell to a suitable purchaser. The School appears to be a most successful one, and we should say a genuine investment. We understand there are 110 Pupils, of whom 17 are Boarders. The latter pay 63 guineas per annum, and the Day Pupils about £12 per annum. Rent of good house, £95 per annum, held on 12 years' lease with break at every 3 years. Very considerate landlord. Price for goodwill, £1,500. School furniture at valuation, or freehold of house, goodwill, and furniture, about £3,000.—No. 8,039.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—

GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 and 13 Henrietta Street, Covent Garden, London, W.C.2.

Posts Vacant—continued.

SCHOOL COURSES AND READERS

IN

FRENCH

PUBLISHED AT THE

University Tutorial Press.

The Matriculation French Course. By ERNEST WEEKLEY, M.A., Professor of French at University College, Nottingham. *Third Edition.* 5s.

This work includes accidence, elementary syntax, exercises, and passages for translation into French. Exercises and continuous passages for translation into French are provided.

"The rules are well expressed, the exercises appropriate, the matter accurate and well arranged."—*Guardian*.

Senior French Course. By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. 5s.

The text is substantially that of Professor Weekley's *Matriculation French Course*, but the exercises and passages for translation into French are different.

"A model of clearness and simplicity."—*The Journal of Education*.

New Junior French Course. By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 4s.

A year's Course in Reading, Grammar, and Translation into French, with material for oral practice.

Preliminary French Course. By H. J. CHAYTOR, M.A., Fellow of St. Catharine's College, Cambridge, late Head Master of Plymouth College, and H. E. TRUELOVE, B.A., Modern Language Master at Plymouth College. *Second Edition.* 2s. 3d.

A beginner's course leading up to the *New Junior French Course*. Contains grammar and translation from and into French, with provision for oral work.

"An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the direct method."—*Athenaeum*.

School Certificate Practice in French. By H. J. CHAYTOR, M.A. 2s.

Contains material in unseen, set composition, and free composition for a weekly test of the work of forms preparing for School Certificate examinations.

French Essays, Matriculation. By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A., late Examiner in French at the University of London. 2s. 3d.

A carefully graduated course in Free Composition in French suitable for examinations of the standard of London Matriculation.

"A serviceable book which will contribute its share to the improvement of this important part of the French teacher's work."—*School World*.

Direct French Course. By H. J. CHAYTOR, M.A. 2s. 3d. With Vocabulary French-English, 3s. Vocabulary (separately), 1s. net.

The book is intended primarily for those who pass from elementary to secondary schools at the age of 12 or 13 with absolutely no knowledge of French, but it has been found to be a most suitable book for beginners generally.

"Those who have not yet been convinced of the advantage of the direct method might be induced to change their opinions on the matter by a study of Mr. Chaytor's 'Direct French Course.'"—*Secondary Education*.

For other announcements of the University Tutorial Press, see pp. 461, 497, 512.

Complete Educational Catalogue, and separate Catalogue of Class Books in French, post free on application.

University Tutorial Press, Ltd.,

HIGH STREET, NEW OXFORD STREET, LONDON, W.C.2.

London: Printed by C. F. HODGSON & SON, Newton Street, Kingsway, W.C.2, and Published for the Proprietors by Mr. WILLIAM RICE, 3 Ludgate Broadway, E.C.4.

Second Year Direct French Course. By G. A. ROBERTS, M.A., and H. J. CHAYTOR, M.A. With Vocabulary French-English, and numerous illustrations. 3s.

A Second Year's Course following on Mr. Chaytor's "Direct French Course." It is based entirely on the direct method. The reading matter deals not only with French life, but with such things as central and local government, the army, education, &c.

"Well conceived as a whole and carefully carried out."—*The Times*.

Groundwork of French Composition. By Professor ERNEST WEEKLEY, M.A. 3s.

An introductory book containing the main rules of French syntax as they affect composition, general hints on the turning of English into French, and a number of extracts.

"The author's works have done much to raise the standard in French scholarship throughout the country."—*Secondary School Journal*.

Class Work in French Composition. By Professor ERNEST WEEKLEY, M.A. 3s.

This book, which consists of passages graduated in order of difficulty, is essentially for class work under the supervision of a teacher. Complete vocabularies in order of the text are provided.

"A useful series of continuous English passages for translation into French prose."—*School Guardian*.

Senior French Reader. By R. F. JAMES, B.A. With Introduction, Notes, and Vocabulary. 4s.

This reader consists of extracts in prose and verse long enough to be of sustained interest and representative of the best French writers of the last century.

"This is a splendid reader: one feels that a real peep into good French literature has been obtained."—*Schoolmaster*.

Senior French Unseens. By L. J. GARDINER, M.A., late French Mistress, Perse High School for Girls, Cambridge. 1s. 9d.

"We have no hesitation in recommending this book."—*Secondary Education*.

New Junior French Reader. By J. P. R. MARICHAL, L. ès L., late Lecturer in French at Queen's University, Ontario, and L. J. GARDINER, M.A., late French Mistress, Perse High School for Girls, Cambridge. 3s.

For use in junior forms. Provision is made for oral practice, and a number of passages are given for retranslation into French.

"The co-operation of a French and an English editor has produced the happiest results."—*The Journal of Education*.

The Matriculation French Reader. By J. A. PERRET, late Examiner at the University of London. With Notes and Vocabulary. 4s.

The Notes contain comments on grammatical and linguistic points, and renderings to show the difference between French and English idiom.

"We can recommend this reader without reserve."—*School World*.

-5961

Supplement to THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 612.

JULY 1, 1920.

A SELECTION OF CLASS BOOKS ON ENGLISH, GEOGRAPHY, and HISTORY FOR SECONDARY SCHOOLS.

English.

Preliminary English Course. By A. M. WALMSLEY, M.A., late Senior English Master, Middlesbrough Boys' High School. **2s. 3d.**

A beginner's course in grammar and composition based mainly on inductive methods.

"The author has kept in view the real aim of grammar, namely the production of good English."—*Athenæum*.

Junior English Grammar with Parsing and Analysis.

By A. M. WALMSLEY, M.A. *Second Edition, Revised.* **2s. 3d.**
The recommendations of the Joint Committee on Grammatical Terminology have been completely adopted throughout.

"The work of a teacher who knows the value of compromise between the new and the old methods."—*Journal of the Assistant Masters' Association*.

Junior Course of English Composition. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. **2s. 3d.**

This book provides a progressive course of work suitable for pupils between the ages of twelve and fifteen. It deals especially with those difficulties over which young learners most frequently stumble.

"Examples and illustrations are plentiful, and have been compiled with an eye to their utility as well as their literary merit."—*Educational News*.

Senior Course of English Composition. By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. *Second Edition.* **4s.**

A progressive course dealing with such points as the experience of the author has found to be most useful to pupils of the ages fifteen to eighteen.

"A useful handbook . . . lucid and thoughtful, and deserves popularity."—*Cambridge Review*.

The Matriculation English Course. By W. H. LOW M.A., and JOHN BRIGGS, M.A. *Third Edition.* **5s.**

A graduated course in English grammar, composition, and précis-writing with numerous examples for exercise.

"Admirably fulfils its purpose. The chapters on précis-writing and indexing are excellent."—*Westminster Review*.

An Anthology of English Verse. For use in Schools and Colleges. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. *Second Edition, Revised and Enlarged.* **4s.**

A selection of the best in all branches of English poetry except the dramatic, from Wyatt to Swinburne.

"The book shows a sound and catholic taste."—*Cambridge Review*.

"It is a charming and truly representative collection."—*Guardian*.

An Anthology of English Prose. For use in Schools and Colleges. By S. E. GOGGIN, M.A., and A. R. WEEKES, M.A. **4s.**

Illustrates the development of our prose in scope and subject, and in point of style, and gives such an idea of the work of our great writers as shall incite the student to read them for himself.

"This anthology of English prose is compiled with abundant good sense. Within its limits the choice of writers could not well be bettered. . . . A very useful book."—*Saturday Review*.

The Tutorial History of English Literature. By A. J. WYATT, M.A. *Third Edition*, continued to the present time. **4s.**

The chief feature of this book is that it devotes attention mainly to the important aspects of the work of the chief English authors while tracing the development of our literature.

"The book is undoubtedly the best school history of literature that has yet come under our notice."—*Guardian*.

Geography and History.

Textbook of Geography. By G. C. FRY, M.Sc. *Second Edition, Revised and Enlarged.* **6s. 6d.**

For use in middle and upper forms. Stress is laid on the inter-connection of Physical, Political, and Economic Geography.

"The compilation is by no means one of mere geographical facts; the 'why' and the 'wherefore' are everywhere in evidence."—*Schoolmaster*.

Principles of Physical Geography. Adapted from the *Textbook of Geography*. By G. C. FRY, M.Sc. **2s. 3d.**

"In this serviceable volume Mr. Fry prepares the way clearly and fully for the study of economic and regional geography."—*Educational News*.

Junior Geography. By G. C. FRY, M.Sc. *Second Edition.* **4s.**

A new edition, including outlines of Physical as well as Regional Geography, brought as far as possible up to date to include the changes effected by the Peace Treaties of 1919.

"A concise book of geography on modern lines. The diagrams convey definite visual instruction directly illustrating the text."—*Education*.

Preliminary Geography. By E. G. HODGKINSON, B.A., F.R.G.S., Assistant Master, Crewe County School. *Second Edition.* **2s. 3d.**

A book for beginners, containing elementary physical geography, an outline of the geography of the World, and the geography of the British Isles in detail.

"An admirable textbook, clear, direct, and well suited to the needs of pupils for whom it is intended."—*Literary World*.

Preliminary History of England. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A. With numerous Illustrations. **3s.**

For pupils of the ages of ten to thirteen. Stress is laid on social and economic conditions and on constitutional developments.

"It deals with English history clearly and convincingly. Its illustrations are good and, particularly in military matters, well chosen."—*Secondary School Journal*.

School History of England. By M. E. CARTER, Honour School of Modern History, Oxford. **5s.**

Suitable for use in middle forms of schools.

"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.

Social History of England, A. By FREDERICK BRADSHAW, D.Sc., M.A. **6s.**

"An exceedingly interesting and valuable little book . . . a book of high authority and serviceableness."—*The Journal of Education*.

Government of the United Kingdom, its Colonies and Dependencies. By A. E. HOGAN, LL.D., B.A. *Fourth Edition, Revised and Enlarged.* [In the press.]

An elementary account of the British Constitution suitable for upper schools.

"The account of the present-day institutions of the British Empire is good and clear."—*School World*.

Children's Era Handbook.

"Makers of To-morrow."

THE SCHOOLMASTER says: "The 'makers of to-morrow' are the children of 'to-day,' so that the publication of this most remarkable book, which treats of every phase of young life from the view-point of the parent, pastor, teacher, and social reformer, marks an era in the life of the nation—the 'Children's Era.'"

THE CHILD says: "The book is unique and provides a treasure-house, armamentarium, and workshop, where reliable weapons, effective tools, and all other requisites for successful work in the great cause of child welfare can be found."

OTHER PRESS AND PUBLIC NOTICES:
"Epoch-making." "An Encyclopædia." "Invaluable." "Unique."
"Among the 'great' books on my shelves."

"Makers of To-morrow."

Edited by T. VIVIAN REES. 173 pages. 4 beautiful Illustrations.
Published by the NATIONAL SUNDAY SCHOOL UNION, 57 Ludgate Hill,
London, E.C.4, at 1s. 6d., cost price.
Obtainable through all Booksellers.

LA PETITE REVUE
POUR TOUS CEUX QUI AIMENT LE FRANÇAIS

(Relliance Press, London.)

Vol. V begins 15th Sept.

Parcels, post free, **three** times a term at the rate of 6d. per pupil, and pro rata. *Supported by many educationists.*

March and May out of print.

Order for 16th June and 15th July.

BOYS and GIRLS ENJOY L.P.R.

Specimens free, and "Opinions."

REVIEWS AND MINOR NOTICES.

THE DEVELOPMENT OF BOTANY. *Outlines of the History of Botany.*

By Prof. R. J. HARVEY-GIBSON. (10s. net. Black.)

Students of botany will be grateful to Prof. Harvey-Gibson for this admirable account of the development of their science. It consists of a course of lectures delivered to third-year students of the University of Liverpool, and owes much of its force and vivacity to the retention of the style of the lecture room. Approximately one-half of the book is devoted to pre-Darwinian botany, and naturally is concerned mainly with the epoch-making work of Theophrastus, Hales, Ray, Linnaeus, Ingen-Housz, and other great investigators. After 1859, the progress of the science—enormously stimulated by the discoveries of Darwin and Hofmeister—was continuous, and its history is one of ideas rather than of men. Throughout the volume the author shows a judicial temper which will do much to keep the reader's views in correct perspective. The impartiality with which he considers both sides of unsettled controversies is conspicuous; an excellent example is his summary of the conflicting theories regarding the evolution of the sporophyte generation.

He does not hesitate, however, to state his views with vigour when he disagrees with commonly received opinion. He gives repeated instances of the inaccuracy of Sachs' "History of Botany," so long accepted as authoritative, but points out that, "whatever we may think of him [Sachs] as a historian, we must assign to him the place of honour as the first since De Saussure to revive the experimental side of plant physiology, and submit the phenomena of living nature to critical laboratory investigation and analysis." Prof. Harvey-Gibson's statement that the attitude of mind of Linnaeus was utterly unscientific will doubtless come as a shock to many readers; but he justifies his heterodoxy. Again, there are "very few botanists who have not succumbed to the authority of Engler's great name in taxonomy," but the author has "no hesitation in prophesying that in years to come botanists will regard Engler's system as having done as much to retard the attainment of a true phylogenetic classification of angiosperms as Linnaeus's sexual system retarded a natural classification, as it was then understood, in the eighteenth century." The views of Hallier and Lotsy on this question are stated with marked approval. The author is, indeed, as ready with praise of good work as with condemnation of departures from scientific method.

From a book so good throughout it is not easy to select parts for special commendation. The main lines of research in the physiology, morphology, and evolution of plants are all clearly traced, and the significance of every great advance explained. Only geographical distribution and ecology seem to us to have received less than their due share of attention. The author's avowed object in these lectures was, in Prof. Libby's words, "to place the student in the current of scientific thought, and to show science as the constant pursuit of truth rather than the formulation of truth long revealed." He is to be congratulated on having succeeded in his aim.

GUILD SOCIALISM.

- (1) *A Guildsman's Interpretation of History.* By A. J. PENTY. (12s. 6d. net. Allen & Unwin.) (2) *Social Theory.* By G. D. H. COLE. (5s. net. Methuen.) (3) *Chaos and Order in Industry.* By G. D. H. COLE. (7s. 6d. net. Methuen.)

These three books, all of which belong to the same school of thought, are propagandist and partisan rather than scientific. They show how history, political philosophy, and economics can respectively be reduced to the service of a sect. Their common obsession is that curious and pathetic reversion to medievalism known as Guild Socialism. The object of their common hostility is the State which, though they profess that they do not wish to destroy it, they desire to reduce to impotence in the sphere of industry.

Mr. Penty's book—the most considerable which he has yet

written—is obviously the fruit of much reading. It is well and carefully put together, and it expresses a view of the evolution of modern society which, for all its perversity, deserves to be considered and refuted. It eulogizes and idealizes the middle ages and attributes the woes of the modern world largely to the formation of capitalist society on the basis of revived Roman Law. Mr. Penty's spiritual environment is that of the Peasants' Revolt of 1381. His remark (page 295) that "the lawyers have been at the bottom of every rising since Roman Law was revived," is one which might have been attributed to John Ball.

Mr. Cole's two books show that he has travelled far on the road towards anarchy since he edited Rousseau with enthusiasm and spoke with respect of Mr. Bernard Bosanquet.

He is struggling to find some place of rest and repose on the steep decline which leads from the Fabian Socialism of his early days and the Syndicalism near which he has arrived in his descent towards the abyss. Just as Rousseau had set himself an insoluble problem when he tried to reconcile sovereign authority with unrestricted personal freedom, so has Mr. Cole involved himself in hopeless contradiction when he tries to co-ordinate the State with other societies, and to leave the community without any exponent at all of its general will.

Mr. Cole is greatly over-writing himself just now. The present volumes lack style and distinction and show many signs of haste.

CLASSICS.

"The Origins of Architecture."—*Hellenic Architecture: its Genesis and Growth*. By E. BELL. (7s. 6d. net. Bell.)

Mr. Bell apologizes in his preface for adding one more to the many books on classical architecture, but pleads that an attempt, such as his, to epitomize the knowledge which recent archaeological research has given us of the prehistoric and Achaean periods, may "help to fill a lacuna in the history of early classic art." This Mr. Bell certainly does in a very lucid summary of what can be established about prehistoric Greece and in his whole treatment of Cretan architecture as showing a development of the architectural use of columns. The Mycenaean period, as reflected in literature by Homer, is exemplified by the palace of Tiryns, Mycenae, and the Treasury of Atreus, and a link is found between Achaean civilization and classical Greek architecture in the temple of Hera at Olympia. So far as textbooks are concerned, this is comparatively new ground, but, even in regard to the later periods, Mr. Bell has no need to apologize for his work. It is without doubt the most useful compendium that we have seen, and treats the rise and development of the three classical orders with a masterly command of detail which could hardly be excelled. And the influence of Egyptian stone architecture upon the development of the Doric order, like that of Western Asia on the Ionic, is a point not generally appreciated apart from the readers of the publications of different learned societies. All of the illustrations—of which there is a great number—are unusually good, and we heartily recommend the book.

Douglas's Aeneid. By L. M. WATT. (14s. net. Cambridge University Press.)

This book is of far more than mere bibliographical interest. One chapter, it is true, is concerned entirely with manuscripts and readings, and three lengthy appendixes, covering some sixty pages, set forth the chief variants; but, as the preface informs us, the book is "an attempt to elucidate Gawain Douglas's work, and to place it in its proper setting, as a literary document." In this Mr. Watt has succeeded in a measure far greater than the uncouthness of his author's language might have led one to expect. Of his two introductory chapters, the first, on "The Man and his Fame," shows Douglas in relation to contemporaries, such as Polydore Virgil and others, while the second, "On the Man and his Work," treats of an interesting aspect of the Renaissance as "a quest after the wisdom of the past to enrich and enlighten the present," which "passed on to an elevation of the vernacular as a literary medium" (page 26), a chapter in which all students of the Renaissance will be peculiarly interested. The third chapter, on "The Translation, its Method and Result," brings Mr. Watt to the heart of his subject, and he is to be congratulated upon the skill with which he has shown, by apt quotations, how the plangent tenderness of Virgil is more readily represented in Scots than in English. Reference should also be made to his excellent remarks on the art of translating (pages 77 ff.), and to his insistence upon the real feeling for Nature which Douglas shows in the Prologues inserted between the different books of his translation.

But he is not blind to his author's faults, and appraises him with just critical acumen when he sums him up in the concise remark that "the humanist is too frequently lost in the medievalist." We should add that the chapter on "Language and Influences" (pages 149-176) will be of unusual interest to philologists.

"Scriptorum Classicorum Bibliotheca Oxoniensis."—(1) *Titii Livii ab Urbe Condita*. By Prof. C. F. WALTERS and Prof. R. S. CONWAY. Tomus II, Libri VI-X. (5s. net.) (2) *Xenophontis: Opera Omnia*. Tomus V. Edited by E. C. MARCHANT. (5s. net.) (3) *Phaedri: Fabulae Aesopiae cum Nicolai Perotti Prologo et Decem Novis Fabulis*. Edited by J. P. POSTGATE. (4s. 6d. net.) (Clarendon Press.)

Three new texts in this series is indeed a plethora of riches! As schoolmasters we are all too much inclined to take our plain texts for granted, but when new ones are published it is a fit occasion for us to reflect and be duly grateful for the existence of scholars who are both capable and willing to do the (often dreary and always laborious) spade-work of critical emendation and collation of MSS. which is the prerequisite of our own work as classical teachers. It would be an impertinence here to dwell upon the competence of the present editors for their respective work. Profs. Conway and Walters have done a great deal of original research, as is well known to readers of the *Classical Quarterly*, and have gained the gratitude of all patriotic scholars for being the first Englishmen to give us a critical text of Livy. We welcome this second volume of their labours, which is fully worthy of its predecessor reviewed in these columns some years ago. Mr. Marchant, too, is to be congratulated upon the completion of his task. It has been no mean one, and, thanks to him, the Oxford text of Xenophon—an author of whom he has made a lifelong study—is now complete. Last, but not least, Prof. Postgate gives us a much needed text of Phaedrus in the same series. Though Phaedrus is not an author much read in schools, as scholars more than as schoolmasters, we want a trustworthy text of him.

EDUCATION.

A Memoir of the Right Honourable Sir William Anson, Baronet. Edited by Bishop H. HENSLEY HENSON. (12s. 6d. net. Clarendon Press.)

This volume has a formidable beginning, with its genealogical tables setting forth the Anson Pedigree, the Pack Pedigree, the Beresford Descent, and the Dickenson Pedigree. The ceremonial attitude, however, is not maintained, and we soon get down to the real subject. The book lacks unity, and the editor confesses that it has been impossible to avoid a certain amount of repetition in a work to which so many different people have contributed by dealing with the same material, though from different points of view. One is tempted to say that the best of the volume is made up of the subject's own letters and the tantalizing fragment of autobiography; but this would be unfair to the editor, who has succeeded in getting together a mass of most interesting matter. His great merit is the fine tone he maintains in dealing with subjects of the most controversial character. Our readers will be interested mainly in that period of Anson's life which was spent at the Education Office. Sir William confessed "that though all teachers were probably 'faddists' in that each man believed in his own method, yet that it was possible to learn how to teach." But it is Bishop Henson, not Sir William, who is so concerned about "the sensitive professionalism of the teachers," and who tells us that "the school is but one of the three great educational instruments, and not the most important. Both the home and the Church are far more potent as educating influences." But we pardon this depreciation, since the Bishop, after all, is enthusiastic about Sir William's own "real passion for the practice of teaching." We welcome this book as a well merited tribute to one of the few genuine forerunners of our present Minister of Education. There is no index.

An Adventure in Working-class Education. By A. MANSBRIDGE. (6s. net. Longmans.)

Mr. Mansbridge here writes vigorously and modestly on a subject on which he is the highest authority. He gives an admirable account of the origin and history of the Workers' Educational Association, and interprets its aims and ideals in a way that cannot fail to do good. For there is much misunderstanding even yet about what the Association really stands for. On one point it would be well to have more light than is supplied by this volume—that is, the actual relation between the Labour Party and the Association. How far does Mr. Mansbridge's organization represent the attitude of labour to education? It is sometimes said that the Association is made up merely of the *élite* of the working classes, and that the great body of the wage-earners are totally indifferent, if not hostile, to education. If this be so, it is all the more important that the Workers' Educational Association should be encouraged. No better service could be rendered to the cause

of education than to publish such an account as this. If it does not represent what labour as a whole wants, it represents what the best of labour does want and what all the rest of labour should want. Mr. Mansbridge's easy intimate style creates just the sort of atmosphere that is most effective in dealing with his subject.

Science and Life: Aberdeen Addresses. By FREDERICK SODDY. (10s. 6d. net. Murray.)

In these outspoken and stimulating essays and addresses, Prof. Soddy ranges over a wide field, but in all of them he emphasizes the fact that the development—even the survival—of what is best in civilization depends on our power to understand and control inanimate nature. The book as a whole is a well timed and eloquent vindication of science, and a protest against a system which leaves the administration of modern States to those who have been so trained on medieval lines that they are hopelessly out of touch with their environment, because they are unable to realize that "the world of men has changed more in essential respects in the last century than in the whole previous period of recorded history." Prof. Soddy exposes a glaring example of official indifference or hostility to science in the diversion of the funds of the Carnegie Trust from the main purpose for which they were given—the furtherance of scientific research. On the other hand, his hopeful speculations on the limitless possibilities for human benefit which lie in the stores of atomic energy yet to be unlocked by physicists will fascinate and inspire the least imaginative of readers. Two scientific papers are included. One of these, on "The Evolution of Matter," provides the general reader with the best popular account we have seen of radioactivity, in the investigation of which Prof. Soddy took a leading part. The book should be read and pondered by all our statesmen, educationists, and students.

The Problem of National Education in India. By L. RAI. (6s. net. Allen & Unwin.)

Mr. Rai approaches his subject in a thoroughly modern spirit. He has no sympathy with the movement backwards towards the old civilization and literature of India. He looks forward to a new development on western lines. The book is not written for experts in education, but is meant for the lay reader. This accounts for the rather lavish quotations from, and expositions of, the works of present-day English and American educationists. But the work is more than a compilation, for it has a distinct value to English readers as being an exemplification of the reaction of an enthusiastic Indian to all the educational influences of the West. He is loyal to our Government, but he maintains that the loyalty of India "must be rational, reasoned, and sincere," and to this end we must see to it that India remains "a part of the British Commonwealth on terms of equality with the other parts of the Empire." Mr. Rai demands vocational education for his country, and in his final two chapters provides us with a quite unusual combination of eastern ideals and western methods.

National Union of Teachers War Record, 1914-1919. (2s. 6d. net.)

The N.U.T. has every reason to be proud of this "Short Account of Duty and Work accomplished during the War," both from the nature of the matter dealt with and from the manner in which it has been treated. The seven chapters give an account of the doings of the Union in all the activities of the war and the war time, and make it quite clear that the organization deserved well of its members during those trying years. It is pleasant to find that the Union was as zealous for the interests of the children as for those of its own members. As was only to be expected, the women's share in war work has been fully recognized. A list is given of the teachers who joined the forces; another of those who were honoured for gallant service; and a third of those who fell. A handsome volume, whose value will increase with the years.

A Guide to the History of Education. By J. W. ADAMSON. (8d. net. S.P.C.K.)

In 45 well printed pages, Prof. Adamson presents to the world his views on the study of his specialty. It is doubtful whether the ordinary reader will be able to avail himself of the guidance offered, for the ideal held up is a somewhat lofty one, and when the novice does get a page to himself at the end, he will hardly regard his treatment as genial. On the other hand, those who have some acquaintance with the subject will find here much valuable help, from one who has the right to speak with authority. What Prof. Adamson recommends here he has put into practice in his admirable "A Short History of Education."

The New Children: Talks with Dr. Maria Montessori. By S. RADICE (Mrs. A. H. Radice). (4s. net. Hodder & Stoughton.)

If the Montessori propaganda had done nothing else (and we are very far from asserting that such is the case), it would have deserved well of this country for having stirred the rather stagnant waters of serious educational thought, as distinguished from mere multiplication

of schools. Mrs. Radice here makes a lively and readable addition to the growing Montessori literature, but, as her attitude is entirely that of the admiring and loving disciple, the reader must be prepared for exposition rather than criticism. And the exposition is popular and sketchy, nowhere going far below the surface; witness, for example, the unsatisfying chapter which bears the alluring title, "Montessori and Bergson." She leaves us, in fact, strongly echoing her own desire that a writer should arise "who can re-think Dr. Montessori in English, as Dr. Wildon Carr has done for Bergson." Much misunderstanding might then be cleared up. Meanwhile we have an uneasy suspicion, which Mrs. Radice says nothing to allay, that Dr. Montessori is unsound on the subject of imagination, and that she has not really tackled the profoundly important question of play. On the other hand, her powerful plea for the sacredness of the individual is precisely what democracy needs, if in the deepest sense it is to win the war, especially in view of the growing activity of the State in regard to education. On that ground we welcome Mrs. Radice's attempt to popularize Montessori.

The Classroom Republic. By E. A. CRADDOCK. (2s. 6d. net. Black.)

The experiments in school discipline connected with the names of Messrs. MacMunn and J. H. Simpson, and now with that of Mr. Craddock, though doubtless regarded as oddities by the average schoolmaster, are, at any rate, in some sort of correspondence with the modern care for self-determination as opposed to submission to authority. It has usually been held that school is, on the whole, the place for the latter, and college for the former—a view which would have more to say for itself if everyone went to college. The trend of these experiments is to break down this distinction, the school teacher delegating his disciplinary powers to the boys, as the college tutor delegates it to the students. Mr. Craddock's experiment was tried with a class of fourth-form boys of average age thirteen, and his "classroom republic," after two years of existence, was so far successful that he would no more think of going back to the old way than he would think of re-establishing trial by ordeal. He would not, that is to say, go back to the usual position in which discipline is a sort of "duel of wits" between master and boy. Mr. Craddock's personal experience of the "classroom republic" will, we hope, receive the close attention of his fellow teachers. His later chapters on the "school republic" are more in the nature of an interesting speculation.

Psychology and Folk-lore. By Dr. R. R. MARETT. (7s. 6d. Methuen.)

The eleven articles in this book have no organic connexion with each other, though they all deal with different aspects of anthropology. Dr. Marett has adopted the objectionable plan of naming his book after the title of the first article. There is the further objection that many of the articles were prepared originally as addresses to associations, and are reproduced here exactly as they were delivered. He has "changed nothing, not even suppressing a few passages of an occasional character." Further, he is unrepentant, and tells us that "anyone with imagination can make the necessary allowance." Readers deficient in this type of imagination may be pardoned for preferring a book that is an organized whole and is written *ad hoc*. The individual contributions are admirable in themselves, as was to be expected from their distinguished author. The reader feels that he is in the hands of a master, and cannot but admit that, fragmentary as is the text, it fully justifies the high claims made for his study by the author in his final section dealing with the relation between anthropology and university education.

ENGLISH.

A History of Modern Colloquial English.

By Prof. H. C. WYLD. (21s. net. T. Fisher Unwin.)

Another valuable addition to Prof. Wyld's contributions to the study of English; while appealing especially to the advanced student, it should prove of deep interest to the general reader. The amount of care and research of which every page bears evidence should make the book the standard one for many years to come. We are shown how London English naturally came to be adopted as Court English and so Standard English; that this London English, at first a form of Southern English, had come by Chaucer's time to be mainly an East Midland form with well marked Kentish influences. The idea that Chaucer "created" modern Standard English, in the sense that he combined forms from various dialects and imposed this composite language on his own and future generations, is shown to be quite incorrect. He used the Court Speech of his day, enlarging and enriching it, and fixing a model for literary use. From this time onward there is a Standard English to which all educated men gradually conform, though dialect forms occur from time to time, but ever more rarely, in the literature. In

(Continued on page 504.)

KINGS TREASURIES

General Editor - - -

- A New Series of English Literature for all Grades from Preparatory School to Upper Form. Standard Texts and Volumes by Modern Authors such as Conrad, Hardy, Tolstoy, Newbolt, Quiller-Couch, W. H. Hudson, Rupert Brooke, Walter de la Mare, and all the Modern Poets; Stopford Brooke, Anatole France, &c., &c. Several Anthologies of a fresh and interesting kind.
- The Kings' Treasuries are cloth-bound with gilt title, pocket size, and very light to handle, clearly printed, and tastefully decorated. Some volumes are illustrated, and all contain frontispiece portraits.

PRICES: 1s. 9d. net per volume -

*The Volumes marked thus * are now ready for the inspection of Teachers.
All the Twenty-five Volumes will be on sale by July 25th.*

- *PROSE AND POETRY.** By Sir HENRY NEWBOLT. Selected by the Author. 256 pp. 1s. 9d. net. Containing selected poems from the various volumes of verse, and prose passages dealing with subjects which appeal to young people.
- *TALES FROM TOLSTOY.** Selected Translations from the *Parables and Tales*. 192 pp. 1s. 6d. net. Containing eight stories of varying length, a Memoir of the Author, and a chapter entitled "Thoughts and Questions after Reading the Stories."
- *MODERN POETRY.** 192 pp. Edited by GUY N. POCKOCK, M.A., Royal Naval College, Dartmouth. 1s. 9d. net. Containing poems by Alfred Noyes, Rudyard Kipling, Rupert Brooke, John Masefield, R. L. Stevenson, W. E. Henley, Sir H. Newbolt, Robert Bridges, W. B. Yeats, Ralph Hodgson, Thomas Hardy, Julian Grenfell, John Drinkwater, Walter de la Mare, Francis Thompson, &c.
- *SESAME AND LILIES.** By JOHN RUSKIN. Edited by SYBIL WRAGGE, Armstrong College, Newcastle-on-Tyne. 1s. 6d. net. 192 pp. Short Introduction and footnotes, and a Commentary dealing simply with the Life of Ruskin and his Style of Writing.
- YOUTH, AND GASPARD RUIZ.** By JOSEPH CONRAD. 192 pp. With Portrait of the Author. 1s. 9d. net. The former story is a record of Man's struggle with the Sea. The second tale deals with life in South America. At the end there is an interesting "Conrad Catechism" which has been approved by the author.
- BLACK BEAUTY.** The Autobiography of a Horse. By ANNA SEWELL. With Portrait of the Author. 288 pp. 1s. 9d. net.
- *THE ADVENTURES OF ODYSSEUS.** Retold from Homer in English Prose by F. S. MARVIN, R. J. G. MAYOR, and F. M. STAWELL. Fully Illustrated. 224 pp. 1s. 9d. net.
- FORM-ROOM PLAYS, Junior Book.** Compiled from English Literature by EVELYN SMITH, High School for Girls, Glasgow. 256 pp. 1s. 9d. net. These plays are planned to require the minimum of stage properties and costumes. Also excellent for use as a literary reader.
- *THE HEROES.** By CHARLES KINGSLEY. 224 pp. Edited by E. M. WILMOT-BUXTON. 1s. 6d. net. This edition is complete. Footnotes and a useful Commentary, Exercises, and a Pronouncing Index of Proper Names are provided.
- PARADISE LOST (Abridged).** By JOHN MILTON. 192 pp. Edited by DAVID C. SOMERVILLE, M.A., Tonbridge School. 1s. 9d. net. Containing the whole of Books I and II, and selections from the later Books. With short Introduction, footnotes, Analytical Commentary, and literary exercises of an entirely new type.
- LAMB AND SHAKESPEARE.** Selections from the *Tales and the Plays*. 256 pp. With Portrait of Mary Lamb. 1s. 6d. net.
- *THE DE COVERLEY PAPERS.** Selected from *The Spectator*. 128 pp. With Portrait of Addison. Edited by JOSEPH MEAK, M.A., University College School, Hampstead. 1s. 6d. net.
- A TALE OF TWO CITIES.** By CHARLES DICKENS. 320 pp. With Portrait of the Author. Edited by GRACE TODHUNTER. 1s. 9d. net. A few Notes and Comments required by the historical nature of the story are added as unobtrusively as possible.
- *THE LORE OF THE WANDERER.** An Anthology of the Open Air. 256 pp. By F. W. TICKNER, D.Lit., B.Sc. 1s. 9d. net. Containing Essays by R. L. Stevenson (56 pp.), William Hazlitt, Francis Bacon, J. A. Symonds, Edward Thomas, Richard Jefferies (*The Pageant of Summer*), H. D. Thoreau, &c.
- *KING RICHARD II.** By WILLIAM SHAKESPEARE. 192 pp. Edited by RICHARD WILSON, D.Litt., &c. 1s. 9d. net. With short Introduction and footnotes and a Commentary dealing with the Story and the Idea of the Play, the Characters, and the Writer; exercises and questions and an Acting Appendix by H. B. BROWNE, M.A.
- *ALPHA OF THE PLOUGH.** Selected Essays from *Pebbles on the Shore and Leaves in the Wind*. 128 pp. With a Portrait of the Author. Epilogue by S. E. MALTRY, M.A. 1s. 9d. net. Containing twenty-one Essays from the above well known books.
- ESSAY ON CLIVE.** By LORD MACAULAY. 192 pp. Edited by RICHARD WILSON, D.Litt. 1s. 9d. net. With a short Introduction on the British in India, footnotes, and a Biography of Macaulay, with exercises and questions on the Essay and the Author.
- THE CHEMICAL HISTORY OF A CANDLE.** By MICHAEL FARADAY. 192 pp. Biographical Preface by Professor J. A. THOMSON, Marischal College, Aberdeen. 1s. 6d. net. This book has been written from the notes taken by Sir William Crookes at Faraday's Lectures in the Royal Institution.
- THE LAY OF THE LAST MINSTREL.** By Sir WALTER SCOTT. 192 pp. Edited by H. J. FINDLAY, M.A. 1s. 6d. net.
- *A SHAKESPEARE PROGRESS.** An Anthology from the Works of the Poet. 320 pp. With Portrait of Shakespeare. Compiled by J. M. DENT. 1s. 9d. net. Has a double aim: it endeavours to group together the most interesting and inspiring scenes from the plays, but it also attempts, by a chronological arrangement, to show the progress and development of the poet's mind.
- A CHILD'S BOOK OF SAINTS (Selections)** By WILLIAM CANTON. 128 pp. Portrait of the Author. Illustrated by T. H. ROBINSON. 1s. 6d. net.
- *A WONDER-BOOK FOR BOYS AND GIRLS.** By NATHANIEL HAWTHORNE. 256 pp. Edited by E. M. WILMOT-BUXTON. 1s. 6d. net.
- *BEE: PRINCESS OF THE DWARFS.** By ANATOLE FRANCE. Translated by THOMAS WRIGHT. 160 pp. Line decorations by CHARLES ROBINSON. 1s. 6d. net.
- EVERGREEN STORIES.** By W. M. L. HUTCHINSON. 256 pp. With Portrait of Euripides. 1s. 9d. net. A selection of stories from the earlier classics.
- *TALES FROM ANDERSEN.** A Selection of some of the more poetic stories for rather older pupils. 256 pp. Edited by REED MOORHOUSE. 1s. 6d. net.

A second fifty volumes are in active preparation, and will be ready early in 1921.

SOLE AGENT FOR SCOTLAND:

J. M. DENT & Sons, Limited,

OF LITERATURE

Prof. Sir A. T. Quiller-Couch

¶ The Kings' Treasures are designed to lead the pupil to love literature. Annotation is only used when absolutely necessary, but Exercises and Questions are freely used to draw out the pupil's thought on the subject-matter, and, in some cases, to help him to imitate the style and construction of the author. The texts are in most cases unabridged.

¶ The Editing embodies all the newest ideas on the teaching of English Literature, and is suitable, not only as a help to general reading, but also for the newer type of literature examination.

- and 1s. 6d. net per volume.

The following books will be ready in the Autumn.

FORT AMITY. By A. T. QUILLER-COUCH. 320 pp. With Portrait of the Author. 1s. 9d. net.

SHIPS AND THE SEA. An Anthology in Verse and Prose from English Literature. Compiled by Prof. Sir A. T. QUILLER-COUCH. 256 pp. 1s. 9d. net.

A highly interesting collection of prose and poetry. Beginning with Chaucer's Shipman, the Editor follows both the highways and the byways to find the Mariner, "Ancient" and otherwise, and his selections carry the reader down to present-day writers like Joseph Conrad and John Masefield.

ESSAY ON JOHN HAMPDEN. By LORD MACAULAY. 192 pp. With Portrait of Hampden. Edited by E. J. REES, M.A., Dulwich College. 1s. 9d. net.

This book is planned on similar lines to the *Essay on Clive*.

A CHRISTMAS CAROL. By CHARLES DICKENS. 224 pp. With Portrait of the Author. Illustrated by C. E. BROCK. 1s. 6d. net.

With a suggestive running Commentary designed to help the pupil to estimate its qualities of head and heart, and a Biography of Dickens, suitable for younger readers.

SELECTIONS FROM BURNS. 192 pp. With a portrait of the Poet. Edited by an Inspector of Schools. 1s. 6d. net.

CRANFORD. By Mrs. GASKELL. 256 pp. With Portrait of the Author. Edited by NORMAN HEPPLE, M.A., M.Litt. 1s. 9d. net.

Containing short Introduction, a few footnotes, and a Commentary dealing with the Author's personality and work, as well as the scene of the story, and including a set of questions and literary exercises.

STORIES FROM THE "ILIAD." Retold from Homer by F. S. MARVIN, R. J. MAYOR, and F. M. STAWELL. With Illustrations from Greek vases. 256 pp. With drawing of Achilles. 1s. 9d. net.

SELECTIONS FROM WORDSWORTH. For older Pupils and Adult Schools. 192 pp. With Portrait of the Author. Edited by D. C. SOMERVILLE, M.A., Assistant Master at Tonbridge School, late of Repton School, Derby. 1s. 9d. net.

THE TRAGEDY OF JULIUS CAESAR. By WILLIAM SHAKESPEARE. 192 pp. With Portrait of Caesar. Edited by E. F. HORSLEY, M.A., Bradford Grammar School. With an Acting Appendix by EVELYN SMITH, Glasgow High School for Girls. 1s. 9d. net.

BIRDS IN A VILLAGE. By W. H. HUDSON. 192 pp. With Portrait of the Author. 1s. 9d. net.

A series of delightful Nature Essays. The book also contains a set of questions, with suggestions for Nature study on Hudson's method.

SELECTED ENGLISH LETTERS. 256 pp. With Portrait of Cowper. Edited by JOHN WISHART, M.A. 1s. 9d. net.

Also a short Introduction on the Letter in English Literature, Exercises, Questions, and a useful Bibliography.

THE ANCIENT MARINER AND OTHER POEMS. By S. T. COLERIDGE. 128 pp. With Portrait of the Poet. Edited by W. B. HENDERSON, M.A. 1s. 9d. net.

LONDON IN LITERATURE. An Anthology of Prose and Verse. 320 pp. With Portrait of SAMUEL PEPYS. Edited by A. H. HEADLEY. 1s. 9d. net.

Containing a large number of passages dealing with or referring to London, beginning with extracts from some of the earliest chronicles and ending with passages from present-day writers.

THE SONG OF HIAWATHA. By H. W. LONGFELLOW. 192 pp. With a Portrait of Longfellow. Edited by EDITH KIMPTON, M.A., author of *The Story Thread, Book Ways*, &c. 1s. 6d. net.

SELECTIONS FROM TENNYSON. 256 pp. With Portrait of the Poet. 1s. 6d. net.

LAYS OF ANCIENT ROME. By Lord MACAULAY. 192 pp. With four excellent Maps. Edited by A. E. ROBERTS, M.A., joint author of *The Teaching of English*, &c. 1s. 6d. net.

With Introduction, short footnotes, and Commentary, containing Biography, and Essay on Macaulay as Poet, as well as a complete set of literary exercises.

THE WRECK OF THE "GOLDEN MARY" AND OTHER SHORT STORIES. By CHARLES DICKENS. 256 pp. With Portrait of the Author. 1s. 9d. net.

UNTO THIS LAST. By JOHN RUSKIN. 192 pp. With Portrait. Edited by SUSAN CUNNINGTON. 1s. 9d. net.

HENRY V. By WILLIAM SHAKESPEARE. 224 pp. With Portrait of Henry V. Edited by F. W. TICKNER, D.Lit., B.Sc. With Acting Appendix by H. B. BROWNE, M.A. 1s. 9d. net.

The Editor treats the text on the same lines as *Richard II*.

THE PILGRIM'S PROGRESS. Slightly abridged from Part I of the Allegory by JOHN BUNYAN. Edited by MARGARET A. GILLILAND, M.A., Fellow of University College, London. 1s. 9d. net.

LAMB'S ESSAYS. A Selection. 256 pp. With Portrait of the Author. Edited by ATHELSTAN RIDGWAY, LL.B. 1s. 9d. net.

MACAULAY'S HISTORY. Chapter III. 192 pp. Edited by S. A. WILLIAMS, M.A. (Lond.). 1s. 9d. net.

This chapter is a complete unity in itself, and forms the best possible description of English life at the time of James II.

JACKANAPES, and THE STORY OF A SHORT LIFE. By Mrs. J. H. EWING. 224 pp. 1s. 9d. net.

Two stories which provide excellent material for literary comparison.

SELECTED ENGLISH ESSAYS. 256 pp. With Portrait of Steele. Selected and Edited by GEORGE G. LOANE, M.A., St. Paul's School, author of *Diaconus*, &c. 1s. 9d. net.

SILAS MARNER. By GEORGE ELIOT. 320 pp. With Portrait of the Author. Edited by NORMAN HEPPLE, M.A., M.Litt. 1s. 9d. net.

Unabridged. A few notes are added, as well as a Memoir of the Author, with questions and literary exercises.

Write for detailed prospectus to the Publishers.

THE GRANT EDUCATIONAL CO., LTD., GLASGOW.

Aldine House, Bedford Street, London, W.C.2.

their speech, however, local influences hold their own till very much later; it is refreshing to know that Sir Walter Raleigh spoke with a strong Devonshire accent while writing the accepted Standard English of his time. In this connexion it may be pointed out that Fielding represents Squire Western as speaking broad Somerset. The aim of the book, however, is not to deal with Regional Dialect as such, but to show how at various times among educated people the colloquial speech has differed from the written language. Plays, novels, memoirs, letters, even State papers, are examined for evidence. While students will probably find the earlier chapters the more interesting, the general reader will prefer the later. In spite of very recent developments Prof. Wyld thinks the tendency has been to refine the spoken language and to simplify the written. Certainly the speech and conversation of the beaux and fine ladies of the Stuart period and later could be astonishingly blunt. The concluding chapter shows how quickly the colloquial tongue changes in comparison with the written; we can read seventeenth-century literature without a shock, but imagine us trying to converse with Lord Foppington or Lady Wishfort.

"Handbooks in the Art of Teaching."—*The Early Stages of Spoken and Written English*. By H. O'GRADY and N. CATTY. (3s. 6d. net. Constable.)

This handbook is in two parts (of forty and sixty pages respectively), of which that dealing with "Spoken English" was written by Hardress O'Grady. Owing to the war, publication of the book was postponed, and its appearance renews our sorrow at the untimely death of that enthusiastic teacher. In these pages he writes freshly and engagingly about the importance of the oral aspect of language study, and more particularly of standard speech and the application of phonetics to the acquisition of it. Always he stimulates, and sometimes he arouses doubt and objection; but we are reluctant to criticize a friend who can no longer reply. The second part is entitled "Training in Verbal Expression," and is written by Miss Nancy Catty. It is marked throughout by lucid common sense and the manifest desire to let the child express what he wants to express. "To ask a child to speak or write on a subject in which he has no native interest is, if not cruel, at least waste of time." Miss Catty insists, and it cannot be said too often, that good composition should be fostered by the teachers of every subject in which there is any writing at all. Valuable suggestions are made for the profitable conduct of oral composition lessons, which are treated as the foundation of all work in written composition. Altogether a good little book that every teacher of English will be the better for reading.

Shakespeare's Versification. By M. A. BAYFIELD. (16s. net. Cambridge University Press.)

Mr. Bayfield, formerly head master of Eastbourne College, has made a close study of Shakespeare's metrical methods. Some of his conclusions were published last year in *The Times Literary Supplement*, and caused considerable controversy. Here he sets his theories fully before us. His starting point is that the ordinary iambic scansion is inadequate and unsatisfactory. Then he propounds an entirely new scheme, the chief features of which are the frequent employment of the "resolved foot" and reliance upon a trochaic measure. Two results follow: the discarding of many abbreviations adopted either from the First Folio or to assist scansion, and the need for a revision of the text in the light of this metrical scheme. In the past editors have been guided by the generally accepted views of the metre in making emendations, and if the former go the latter must go with them. The author gives as an appendix one such revised text—that of Antony and Cleopatra. While we are not convinced that Mr. Bayfield's ideas are always sound, the frequent inadequacy of the iambic method, especially in the later plays, is palpable, and the whole book is suggestive and stimulating. Certainly it makes for a more intelligent enunciation of Shakespeare's verse.

"The New Teaching Series."—*English Literature*.

By E. V. DOWNS. (4s. 6d. net. Hodder & Stoughton.)

The sub-title of this book, "The rudiments of its art and craft," is the more correct description of its contents, for it is an elementary treatise on the technique of literature, not an exposition or criticism of our literature itself. As such it deals in turn with metre, figures of speech, and style, and so leads up to the essay which is not too fully considered. The history and technique of the lyric, the novel, the short story, the ballad, and the drama are fully discussed, as are epic and dramatic poetry and fiction generally. There are copious exercises designed to force the reader to apply to literature the critical knowledge which the text supplies, and brief but sufficient bibliographies. The work is sound. It will be of most value to the individual student and, for this reason, a key to the exercises would be most useful; but it is well worth a trial in the upper forms of secondary schools. Lecturers on English literature in evening classes will find it a godsend, for it will supply just the

information which they have to assume in their classes, but the absence of which is often the heaviest handicap they have to overcome.

English Prose Composition. By Capt. W. J. WESTON. (3s. 6d. net. Pitman.)

The writer claims that this book is a help to the writing of English. It is, however, in no sense a classbook, though it should be useful in tutorial teaching. In plan it is a somewhat loosely constructed scheme which deals in turn with words, sentences, and paragraphs leading up to the essay; but it also includes the usual composition work in précis, letter writing, and style. The method is to base all rules on the examination of passages from more or less well known literature, but the author is apt to be wordy in his endeavour to draw his conclusions. The best features are the copious, and often very original, exercises and the variety of illustrations of the points under discussion.

The Children's Poetry Book.

Collected and arranged by R. M. FLETCHER. (3s. Methuen.)

We have here a collection of fairy poems; songs; long story poems, really selections from *Hiawatha* and the like; oral poems, intended to be read aloud by the teacher; and a miscellaneous assortment of patriotic and historic poems, nearly all of them by well known writers. The selection has been fairly well done, but a few of the poems appear to be quite beyond the comprehension of children of an age to appreciate the bulk of those included in the volume.

GEOGRAPHY.

"The Blue Guides."—*England*. Edited by F. MUIRHEAD. (16s. net. Macmillan.)

The editor of this volume is to be congratulated on preparing a guidebook so far in advance of any hitherto produced in this country. The text is well arranged, clearly printed, and singularly free from mistakes. As regards the general plan of the work, it is similar to the Baedeker series of guidebooks, but in many respects it is greatly superior. Judged by its merits alone, this guide ought to supersede those of Baedeker and other writers. This handbook is primarily intended for travellers, and it therefore includes much information (as to railways, distances, hotels, &c.) that would be needed by visitors from America and the Continent. To the English tourist also it will be found invaluable, as it contains a wealth of detailed information about every part of the country. To ensure accuracy, the editor has obtained the assistance of local authorities, and to bring the work thoroughly up to date he has included the latest regulations on motoring and aviation. An article of thirty-four pages on the study of English monuments, by Prof. Baldwin Brown, deserves special mention, as it provides the ordinary reader with food for reflection when visiting the architectural beauties of the country. There are seventy-five maps and plans, prepared by the firm of Bartholomew & Son, to illustrate the text. They are well drawn and effectively coloured. With the help of the maps, the tourist will be able to find his route in any direction, and, from the plans of cities and cathedrals, he will be able by himself to trace the interesting features of which he is in search. A good index, particularly necessary in so detailed a work, is provided at the end of the volume.

Philips' New World Atlas. Edited by G. PHILIP. New edition. (25s. net.)

The "New World Atlas" contains 144 plates and an index of 35,000 names. It has been prepared under the editorship of the head of the London Geographical Institute, and this is a guarantee of accuracy and good workmanship. The maps are all drawn on a large scale, and so, although full of detail, the place names and other features can be clearly seen. The political maps show the regrouping of the peoples of the world under the terms of the Peace, the changed conditions in the Danube and Balkan States being particularly well marked. A most useful map (No. 47) shows the Western theatre of the Great War and the Western front from Verdun to the Sea. A number of historical maps illustrate the development of British India, Canada, and other parts of the British Empire; while a special feature of the work is a series of tourist maps of the English Lake District, the Central Highlands, Central Switzerland, and other interesting areas; in all these, the routes by road, rail, and steamship are distinctly indicated. This atlas, therefore, is essentially a work of reference, and a copy of it should be available in every school and public library. For an atlas such as this, containing the latest information and produced in so excellent a style, the price is very moderate.

The Teaching of Geography to Children. By L. WINCHESTER. (2s. Methuen.)

This little book of fifty pages is a valuable contribution to the works on school method, for it records the ideas and experiences

(Continued on page 506.)

Cambridge University Press

RECENT PUBLICATIONS

The Oedipus Tyrannus of Sophocles.

Translated and explained by J. T. SHEPPARD, M.A., Fellow of King's College, Cambridge. Demy 8vo. 20s net

The purpose of Mr Sheppard's translation is to give a faithful version, which, if it be read in the light of his commentary, will help the reader to see more clearly the qualities of Sophocles. Mr Sheppard's method is the study of the normal Greek ideas, and he hopes to prove that Sophocles, by playing on a set of simple and familiar notions, has created a poem whose meaning is not disputable, and a drama, in which every part contributes to the tragic beauty of the whole.

Discovery in Greek Lands.

A Sketch of the Principal Excavations and Discoveries of the last fifty years. By F. H. MARSHALL, M.A., Lecturer at Birkbeck College, London. Crown 8vo. With 38 illustrations and map. 8s 6d net

The aim of this book is to give the general reader some idea of the additions made by the excavations of the past 50 years to our knowledge of Ancient Greece. It is hoped that this sketch may be of interest to those who are not specialists in the subject, but would like to know something of the progress of discovery in Greece and Greek lands.

Euclid in Greek.

Book I. With introduction and notes by Sir THOMAS L. HEATH, K.C.B., K.C.V.O., F.R.S., Sc.D. Crown 8vo. 10s net

The editor has long been of opinion that, if the study of Greek and Euclid be combined by reading at least part of Euclid in the original, the two elements will help each other enormously. He puts the book forward in the confident belief that many will in this way come to read Euclid with more zest and more profit.

Practical Geometry.

By C. GODFREY, M.V.O., M.A., and A. W. SIDDONS, M.A. Crown 8vo. 5s net; or in 2 parts, 3s net each

A book designed to take the average student through the course indicated by the age of 15. With this object, the usual formal methods of teaching Geometry have been abandoned whenever an informal method seemed educationally preferable. Certain propositions, however, are still presented in the traditional way, the authors believing that the logical attitude towards Geometry must be cultivated, and is cultivated better by a *gradual* progress than by a sudden jump. The exercises are largely of a practical character.

Theoretical Geometry.

By the same authors. Crown 8vo. 3s net

A sequel to *Practical Geometry* for those who continue their mathematical education beyond the age of 15 or 16. This is a succinct formal presentation of the propositions of the Cambridge schedule, designed to knit together the knowledge already acquired.

These two books are also issued bound together in one volume, price 7s net

The Elements of Analytical Conics.

By C. DAVISON, Sc.D. Crown 8vo. 10s net

The range to be covered by an elementary textbook of analytical conics is not as yet defined. The author has excluded the general equation of the second degree and all more advanced branches of the subject. The more important properties of the conic sections are proved analytically, and rectangular coordinates are used for the most part. The exercises in the text are somewhat numerous.

André Maurois. Les Silences du Colonel

Bramble. Edited, with introduction and notes, by E. A. PHILLIPS, B.A., and E. G. LE GRAND, B. ès L., and containing a special preface by M. MAUROIS. Crown 8vo. 5s 6d net

A Junior French Reader.

By Prof. R. L. G. RITCHIE, M.A., and J. M. MOORE, M.A. Crown 8vo. 4s 6d net

This book is intended to provide suitable readings for pupils who have been learning French for two or three years. The passages which it contains are selected from standard authors; they illustrate widely different types of French prose and verse, and they are comparatively easy.

A Manual of the Bengali Language.

By J. D. ANDERSON, Litt.D., Lecturer on Bengali in the University of Cambridge. Crown 8vo. 7s 6d net. Cambridge Guides to Modern Languages

Britain in the Middle Ages.

A History for Beginners. By FLORENCE L. BOWMAN, Lecturer in Education, Homerton College, Cambridge. Crown 8vo. With 28 illustrations. 3s net

The Group Mind.

By W. McDUGALL, F.R.S., Wilde Reader in Mental Philosophy in the University of Oxford. Royal 8vo. 21s net. Cambridge Psychological Library

In this sequel to his *Introduction to Social Psychology*, the author sketches the principles of collective psychology, and applies these principles to the interpretation of national life and character. The work is scientific, rather than philosophical, in that it aims at stating the facts and principles of social life as it is and has been, without expressing an opinion as to what it should be.

The Concept of Nature.

Turner Lectures delivered in Trinity College, Cambridge, November, 1919. By A. N. WHITEHEAD, Sc.D., F.R.S. Demy 8vo. 14s net

This volume forms a companion book to the author's previous work, *An Enquiry concerning the Principles of Natural Knowledge*. The object of both is to lay the basis of a natural philosophy which is the necessary presupposition of a reorganized speculative physics, but the present work keeps closer to certain fields of philosophy and physics to the exclusion of mathematics. While expressing appreciation of the value of Einstein's work on general relativity, Dr Whitehead does not accept all his theories.

Space, Time, and Gravitation.

An outline of the general Relativity Theory. By A. S. EDDINGTON, M.A., M.Sc., F.R.S., Plumian Professor of Astronomy and Experimental Philosophy, Cambridge. Demy 8vo. With a frontispiece. 15s net

By his theory of relativity Albert Einstein has provoked a revolution of thought in physical science, and it is the aim of this book to give an account of the theory without introducing anything very technical in the way of mathematics, physics, or philosophy. The first nine chapters interpret a clear-cut theory, accepted in all its essentials by a large and growing school of physicists; chapters X and XI deal with very recent advances; and the last chapter contains the author's speculations on the meaning of nature.

Advanced Lecture Notes on Light.

By J. R. ECCLES, M.A., Head Master, Gresham's School, Holt. Crown 4to. 7s 6d net

"It deals successively with Rainbows, Magnifying Power, Chromatic Aberration, Spherical Aberration, the Wave Theory of Light, Interference, Diffraction, and the Polarization of Light. The subject is well handled, and the volume will be found most useful by Science Masters and advanced students of the subject."—*The English Mechanic*

The Cambridge British Flora.

By C. E. MOSS, D.Sc., M.A., F.L.S., F.R.G.S., assisted by specialists in certain genera. Illustrated from drawings by E. W. HUNNYBUN. Volume III, *Portulacaceae to Fumariaceae*.

Imperial 4to. With 191 plates. In one volume, canvas back, paper boards, £7. 7s net; quarter morocco, £11 net. Or in two parts (plates and text separately bound), £6. 15s net; quarter morocco, £12 net

The Study of the Weather.

By E. H. CHAPMAN, M.A., D.Sc. Large crown 8vo. With 56 maps and illustrations. **Second Impression.** 4s net. Cambridge Nature Study Series

"For school use this is, without doubt, the best book yet published on the subject."—*The Journal of Education*

Practical Exercises on the Weather

and Climate of the British Isles and North-West Europe. By W. F. STACEY, F.R.G.S., F.R.Met.Soc. Crown 8vo. 2s 6d net

Stories from Spenser.

By MINNA STEELE SMITH, Fellow of Newnham College. Crown 8vo. With 8 pictures. 3s net

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

of an enthusiastic teacher. The author is certainly right in basing the early geography lessons on Nature-study. She does not always make it clear, however, at what age the various points should be taken. In this and other respects a little more elaboration would have been helpful. The reference to projections in the chapter on maps might well be omitted from a book which is intended to be only an approach to the subject.

Nature Test Maps. (Europe, Asia, Africa, North America, and Australia.) (9d. per dozen. Gill.)

These maps, clearly printed from vertical relief maps, will be found useful for pupils studying the physical features of the continents; at the side of each map a space is left for written notes.

Outdoor Geography. By H. HATCH. (3s. net. Blackie.)

This book consists of a large number of practical exercises, and many of them depend on actual observation and field work. The book should therefore prove helpful to teachers who are doing this kind of work. In some cases the exercises can be done quite as well indoors as out of doors—e.g. the questions on the thermometer. It is doubtful whether children can be expected to take observations of the moon and stars, as those suggested on pages 20-26. In finding the north-south line by the method given on page 13, reference should be made to summer time.

The Quest of the Indies. By R. DARK. (6s. net. Blackwell.)

This interesting book describes the exploits of the great navigators who, in trying to find routes to India, discovered the coasts of Africa and America, and finally circumnavigated the world. There are also chapters on the conquest of Mexico and Peru. This is the type of book that boys should be encouraged to read. A copy of it should certainly be placed in every school library, and it might be used with advantage as a reading book in the middle forms of secondary schools. Some excellent plates illustrate the descriptions.

HISTORY.

A History of the United Kingdom, 1707-1919. By R. S. RAIT. (5s. net. Blackie.)

Prof. Rait modestly tells us that the little volume before us is intended to serve as a textbook for Scottish schools. It is admirably fitted for that particular purpose, but it is worthy of much wider use. For its special feature is that it co-ordinates the histories of North and South Britain, and for the first time gives an adequate presentation of the part played by Scotland as a partner with England in the building of the British Empire. Prof. Rait was exceptionally well qualified to make this interesting experiment in co-ordinated history. He is Historiographer Royal for Scotland, and he was formerly a distinguished graduate and lecturer at Oxford. His knowledge both of Scottish and of English history is profound, and he is easily familiar with the European background of insular politics. He brings his narrative down to the Treaty of Versailles, and provides the fullest account of the Great War which has as yet appeared in any textbook. In this last section, and only in this so far as we have discerned, have (as is not surprising) a few slight slips occurred. Conscriptio was introduced 1916, not 1915 (page 265); the present ruler of Egypt is called Sultan, no longer Khedive (page 285); Bulgaria entered the war in October, not September, 1915 (page 289); Sleswig, not Holstein, was made a plebiscite area by the Treaty of Versailles (page 305).

"The New Age History Readers."—Book I: *The Greeks of Old*. (2s.) Book II: *The Romans of Old*. (2s. 2d.) Book III: *Leaders of Men*. (2s. 4d.) Book IV: *The Middle Ages*. (2s. 8d.) (Nelson.)

With commendable enterprise, Messrs. Nelson & Son have resumed the publication, interrupted by the war, of their attractive historical reading books. As was the case with their predecessors, these four volumes are marked by a singular beauty of presentation. Their outstanding feature is undoubtedly the wonderful coloured pictures, which are, for the most part, reproductions of famous and splendid works of art. But apart from these, almost every page is adorned by some pretty engraving or other. The paper, print, and binding are all first-rate. Considering the high quality of the workmanship, the prices charged are, for these days, extraordinarily low. The narratives in the four books are carefully graded. That in Book I is suited to the capacity of quite young children. That in Book IV would appeal to pupils of fourteen, or even more. In most cases the titles of the volumes sufficiently indicate their contents. In the case of the third, however, it may be well to note that the "Leaders of Men" dealt with range from Edwin of Deira to William II of Germany.

"The New Teaching Series."—*Introduction to World History.* By E. H. SHORT. (4s. 6d. net. Hodder & Stoughton.)

This is a curious book. It is evidently the product of extensive reading and elaborate card-indexing. It is written with obvious gusto and with infectious enthusiasm. To one who is familiar

with the outlines of world history, it abounds in suggestions, side-lights, and illustrations. But as an "introduction" it is quite hopeless. It gives no connected story; it observes no sort of proportion; it rambles over politics, religion, literature, art with bewildering inconsequence. Events of epoch-making importance from the creation of man to the present day are dismissed in a line of a tabular summary, while four pages are devoted to Charles Dickens and five to G. F. Watts! A good many of the dates given in the various summaries are doubtfully accurate; but the placing of Cardinal Newman among the notables of the Middle Ages (page 149) takes one's breath away. Another matter also which is seriously open to question is Mr. Short's advice to students. "For preference," he says, "choose books in which you do not examine the facts too closely," and he recommends students, by way of example, to "surrender themselves to the wizard who penned 'The Times of Erasmus' and 'The Dissolution of the Monasteries.'" He could hardly have chosen a more unfortunate example; for, though the wizardry of Froude is undoubted, his inaccuracy is proverbial, and his prejudice in all matters that affected the Catholic Church notorious. MM. Langlois and Seignobos say of him, "il a le génie de l'inexactitude," and add their opinion that this "maladie de l'inexactitude, ou maladie de Froude, doit être considérée comme incompatible avec l'exercice de la profession d'érudit." There is grave danger lest a pupil who takes Mr. Short's book as his first guide to the study of world history will develop an inaccurate, superficial, and unsystematic habit of mind. Mr. Short mentions many good books from which more detailed and scientific information can be obtained. But who is the Sir James Bury whose "larger textbook of Greek history" is recommended?

"The New World History Series."—Book I: To A.D. 1485. By Miss E. E. POWER. (2s. 9d.) Book II: 1485-1688. By Miss M. G. JONES. (3s.) Book III: 1688-1815. By Miss A. GARDNER. (3s. 3d.) Book IV: 1815-1920. By Miss L. HANSON. (3s. 6d.) (Collins.)

These readers deserve, and will no doubt achieve, a large circulation. Edited by Mr. B. L. Manning, Fellow of Jesus College, Cambridge, and author of the well known monograph on "The People's Faith in the time of Wyclif," they have been written by four ladies of high academic attainments and some experience in teaching. The unifying idea of the series is "interest." All the volumes aim at saving history from the reproach of dullness. To accomplish this purpose they omit unnecessary events, reduce dates to a minimum, and devote attention to making the life of each successive period real and intelligible to the reader. In other words, they are social rather than political histories. Their theme is limited to the history of England, and it is perhaps unfortunate that there is nothing in the title to indicate this. In a "World History" series, especially if "New," a teacher might expect something more—if merely a hyphen between "New" and "World."

"Kings and Queens of England."—*Henry V.* By R. B. MOWAT. (10s. 6d. net. Constable.)

It is an argument in defence of the old arrangement of English history into reigns that a modern publisher should have thought it worth while to issue a series of volumes on the kings and queens of England. It is true that the monarchs are judiciously selected, but, even so, it is suggestive that in every case it is easy for the historian to show that the throne was the centre round which revolved the whole machinery of politics. This was, of course, particularly the case in the Middle Ages, and the theme of Mr. Mowat's scholarly monograph is the typical English medieval king. Mr. Mowat's task in writing a life of Henry V has been in one sense an easy one. He has had several recent predecessors—e.g. Mr. A. J. Church, Sir James Ramsay, Mr. C. L. Kingsford, and Mr. J. H. Wylie. The sources have thus been well worked, and not much new material has been available. But in another sense, his task has been one of peculiar difficulty; for controversy has raged concerning both the character and the policy of Henry V, and Mr. Mowat has had to weigh much conflicting evidence. He has done his work well. In a clearly written, carefully balanced, and judicial narrative, he has told his story and expressed his opinions. He has produced a biography which is a really illuminating historical treatise.

MATHEMATICS.

A Treatise on the Mathematical Theory of Elasticity. By Prof. A. E. H. LOVE. Third Edition. (37s. 6d. net. Cambridge University Press.)

The new edition of this work will be heartily welcomed by all mathematical physicists. In the sixteen years which have elapsed since the appearance of the second edition considerable progress has been made in various directions, and the author has endeavoured

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

voured to present a reasonably complete account of the present state of the science from the points of view of the physicist, the engineer, and the mathematician. The most extensive additions are an appendix to Chapters VIII and IX, dealing with Volterra's theory of dislocations, and a new chapter dealing with the equilibrium of thin shells. One of the outstanding merits of the book is that it will act as a powerful stimulus to further research.

Modern Geometry: the Straight Line and Circle.

By C. V. DURELL. (6s. Macmillan.)

This is a revised edition of Part I of "The Course of Plane Geometry for Advanced Students," but such considerable rearrangement has been made that it has been deemed expedient to change the title. The usual effect of revision is expansion, but in the present instance the pruning knife has been wielded with so much effect that a considerable compression is the result. We regret the excision of the historical notes, for, though slight, they served to bring the subject into touch with the humanities. Condensation has, however, been effected chiefly by degrading a number of theorems to the rank of examples and by the use of smaller type. In this way space has been found for some new material, and the collection of examples has also been thoroughly revised. In its new form the book will continue to maintain its reputation as one of the best introductions to modern geometry which can be placed in the hands of students.

MISCELLANEOUS.

Black's Domestic Dictionary. Edited by EDITH A. BROWNE and MYRIAM ROTHSCHILD. (12s. 6d. net.)

This attractively produced book successfully supplies the practical knowledge necessary to run a house with a minimum of discomfort. The methods recommended are simple, sane, and inspired by practical knowledge. We advise those of our many readers who in these strenuous times have to depend upon themselves for necessary domestic services to procure a copy of the dictionary. It will save them much exasperation and much unnecessary labour.

The Public Schools Yearbook, 1920. Edited by H. F. W. DEANE and W. A. BULKELEY EVANS. (10s. 6d. net. The Yearbook Press.)

We welcome the thirty-first annual issue of this "comprehensive guide to public and preparatory schools, universities, professions, all public services throughout the Empire, and business careers"—as it is described in a sub-title. The editors have had at their disposal a mass of trustworthy and official information concerning all openings in professions and business undertakings, and in view of these sources of information they have revised the scope and order of the volume very thoroughly, and now provide assistance in such up-to-date careers as those of aeronautics, cinematography, rubber production, and welfare work. This book may be confidently recommended to parents, schoolmasters, and to boys leaving school, as likely to provide just the information they need.

RELIGIOUS KNOWLEDGE.

A Handbook to the Septuagint. By R. R. OTTLEY. (8s. net. Methuen.)

Mr. Ottley has already laid students of the Septuagint under obligation by former works dealing with the great Greek version of the Bible, and his name is honourably associated with that of the late Dr. Swete on the title-page of the revised edition of the "Introduction to the Greek Bible," issued by the Cambridge Press. In the present "Handbook" he has produced a really popular introduction to the Septuagint, which ought to prove exceedingly useful in bringing a wider circle of readers and students into touch with this branch of study. The student is introduced to a general description of the version, its early history, the problems of textual criticism, the character and method of the translation, the MSS., the history of the books peculiar to the LXX (the "Apocrypha"), and the language and style of the version. All this varied information is set forth in a very attractive and interesting manner; there is nothing heavy or dull in the book. Two concluding chapters deal with the value of the LXX—how to study it, and Books for study and the MSS. A useful glossary for reference completes the volume. When it is remembered that for centuries the LXX with the New Testament in Greek was the Bible of the Christian Church, the importance of such study will be manifest. We cordially commend Mr. Ottley's handbook to all who are interested in Biblical studies.

"The New Testament for Schools."—(1) *The Gospel According to St. Matthew.* (3s.) (2) *The Gospel According to St. Mark.* (2s. 8d.) (3) *The Gospel According to St. Luke.* (3s.) The Text of the Revised Version, with Introductions and Notes, by the Rev. A. R. WHITHAM. (Rivingtons.)

These three volumes on the three Synoptic Gospels have been planned to meet the needs of the "middle and upper forms of

schools." They are provided with short introductions and a full body of notes printed below the text of the R.V. The notes are on a fairly large scale, and embody useful information which, in most cases, has been brought up to date. A useful feature is that at the end of each chapter a series of questions has been printed, which will be a convenience for class work, especially for written work. Some suggestions, with reference to suitable literature, are also given for further study. Perhaps these references might with advantage be modified or enlarged occasionally. It should be added that the text of the R.V. is printed throughout—a great improvement—and some maps are provided.

The least satisfactory part of these volumes is the Introduction prefixed to each. This is decidedly meagre and inadequate. A rather jejune section, devoted to "Palestine and its People," sets forth the usual stereotyped and rather unsympathetic account we are accustomed to read of the Jewish parties, their special views and characteristic positions. This section might well be revised for a future edition, and some guidance ought to be given to the young student on the more important points of chronology, the articulation of the stages of Christ's Ministry, and some discussion of the nature and content of His teaching. No doubt the notes supply partly what is desired, but a conspectus in the Introductions would be helpful.

SCIENCE.

Chemistry for Textile Students. By B. NORTH and N. BLAND. (30s. net. Cambridge University Press.)

The authors have attempted, in the compass of a handy sized volume, to provide technical school students of textile chemistry with a suitable course of study. They point out that, of the great industries in England, the textile trades employ the smallest percentage of trained technologists, and they rightly insist upon the importance of remedying this disastrous state of affairs. It is obviously a necessary part of the training of the skilled textile worker that a thorough grounding in the principles of chemistry and physics shall have been afforded, and the book before us deals very thoroughly with the rudiments of inorganic and organic chemistry, with a natural bias towards those subjects which are likely to interest more immediately the particular student in view. The first part of the course is concerned with elementary notions, and covers the ground commonly undertaken in the first year. The systematic study of the non-metals follows, together with an introduction to alkalinity and acidimetry. In this section is found an excellent account of water softening; and, in fact, throughout the book the student is constantly brought in touch with chemical problems which are likely to be of considerable assistance in his daily activities. A useful introduction to organic chemistry is given, and finally a section on technical textile chemistry which is admirably put together and which forms a fitting climax to the volume. The book is very well produced, and the ample supply of diagrams and tables adds to its usefulness.

The Engines of the Human Body. By Prof. ARTHUR KEITH. (12s. 6d. net. Williams & Norgate.)

It may be doubted whether a more enjoyable account of the working of the human body than this was ever available for the general reader, or even for professional students, for it not only recounts the well known facts with all the skill of one who is at the same time an authority of front rank and a master of exposition, but it also reveals many of the more recent advances made by anatomists and physiologists. These Christmas lectures at the Royal Institution must have been a rare pleasure to their hearers, with all the accompanying attractions of the models of engines, pumps, bellows, telephone exchanges, and, above all, Goliath, the giant model man, which "worked" at Prof. Keith's behest to show the powers of the human body. Those who could not hear the lectures themselves will, however, find much of their charm in this book, written in a similar style and reproducing their substance. The action of the "engines" of the human body is explained by comparing them with the engine of a motor-bicycle or motor-car, and Prof. Keith shows that the analogy is a remarkably close one. For the benefit of those to whom carburetter, sparking plug, inlet and exhaust pipes, and the rest of it are mysteries, a very clear account, with diagrams, of an internal combustion engine is given in Chapter II. The book ought to be in every school and every home. It is beautifully printed and illustrated.

SPANISH.

Spanish Prose and Poetry, Old and New. With Translated Specimens. By IDA FARNELL. (10s. 6d. Clarendon Press.)

It has long been a complaint on the part of Spaniards that English people associate Spain with little beyond bull fights, the Inquisition, and sherry. Even those people in this country who realize that the author of "Don Quixote" was a Spaniard do not

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C. 2.

appreciate that Spanish literature bears comparison with that of any other country, and that to-day her writers, novelists, and critical essayists command attention in lands far distant from Madrid. Is not the most striking novel of the war the work of a Spaniard, the appreciation of whose work in this country was delayed until an English publisher "boomed" it? When one traverses the field of Spanish literature for the first time, one stands amazed at the beauty and virility of the growth of national and distinct species which owe little if anything to exotic influences. Spain is a treasure-house of art, scenery, architecture, and literature, offering a liberal reward to the true seeker after pleasure. Miss Farnell has long since discovered this rich country, and has been captivated by its beauty. The richness and variety of its poetry, the splendour and sonority of its prose, have appealed to her so greatly that she has wished to present them to English readers in the form of translations from various authors, ranging from the Archpriest of Hita to Vicente Blasco Ibañez. We must say that, although her choice of illustrations has been catholic, it is representative of the best in Spanish literature.

To criticize this volume in detail would be a long task and one that would not be quite fair to the authoress, who disarms us by disclaiming any attempt at fine writing. She is too modest, for the translations in prose lose little more than is inevitable, while the poetic examples show that Miss Farnell is no mean poetess. The critical appreciations of the various authors are not the least part of the book, and where excerpts are given the story of the whole poem or novel is added. Juan Ruiz receives very full treatment; "El libro de Buen Amor" is almost as attractive as in the original—and this is high praise. Other early writers, Don Juan Manuel, Francisco Imperial, the Marquis of Santillana, Luis de Leon, and San Juan de la Cruz, are translated with enviable sympathy and skill. The poets of the golden age are not represented to the same degree as the early and late poets. These latter, however, have generous interpretations, and at times the translations attain a superlatively high level. Gaspar Nuñez de Arce, Rubén Darío (the Nicaraguan "Apostle of Beauty"), Espronceda, and Antonio Machado fittingly proclaim the beauty of modern Spanish poetry, the two translations from Machado being as faithful to the originals as a translation could hope to be. The prose selections of the modern school are not, in our opinion, the best. Ibañez could be more fittingly represented than by the excerpt from *La Barraca*, while Galdos is ignored altogether. However, these are but slight criticisms. We have enjoyed this book, and we commend all who would know of what substance is composed a splendid literature, and who cannot approach it in the original language, to this delightful volume.

Cuba y las Costumbres Cubanas. By FRANK C. EWART.
(3s. 6d. net. Ginn.)

The Modern Language Association of America has recommended "that the textbooks of Spanish embrace works dealing with the geography, history, and customs of Spanish America as well as of Spain," and the avowed purpose of the book is to show "what the United States has done for Cuba." Although the vocabulary is elementary, the language is idiomatic, and for those who wish to gain a knowledge of Cuban life and ways this little volume may serve a useful purpose.

A Commercial Spanish Reader. By J. WARREN.
(3s. 6d. Longmans.)

The teacher of Spanish who wishes to give his class an opportunity of acquiring a wide vocabulary of commercial terms will find his needs satisfied in this reader, which surveys the whole world of commerce, from primitive capital to aeronautics. The vocabulary at the end might have been made fuller, and the volume might have gained additional usefulness by occasional annotations, but as a reader pure and simple it should provide good practice for students of Spanish.

UNIVERSITY OF LONDON—APPOINTMENTS BOARD. — The address of the University of London Appointments Board will be in future 46 Russell Square, London, W.C.1, instead of at the Central Offices of the University at South Kensington. All communications should be addressed to the Secretary of the Board at the new address. Interviews will be given by arrangement on Wednesday afternoons.

CAMBRIDGE HIGHER LOCAL EXAMINATION. — Three hundred and seventy-three candidates entered for the Cambridge Higher Local Examination, which began on June 14 at nineteen home centres and four centres in the colonies. For the Certificate of Proficiency in Modern Languages thirteen candidates have entered. The new Regulations for both examinations can now be obtained from the local secretaries or from Mr. J. H. Flather, Syndicate Buildings, Cambridge.

PLACES IN HONOURS.

Prospectus, giving Full Particulars of Courses and Fees, post free to **Private Students**, from the Secretary,

No. 14 BURLINGTON HOUSE, CAMBRIDGE.

THERE IS EVERY INDICATION

that an unusual proportion of Parents will this Summer be seeking information as to SCHOOLS OUTSIDE THEIR OWN KNOWLEDGE OR THAT OF THEIR FRIENDS; and this movement will not be in one direction only, since some people find themselves in a position to afford to spend more on the education of their children.

THE TWENTY-THIRD EDITION OF

PATON'S LIST of SCHOOLS and TUTORS

is now being printed. There is still time to accept a few more advertisements for GIRLS' SCHOOLS Section.

Full particulars on application.

Grateful letters from parents show that we succeed in providing them with what they urgently require. Grateful letters from Principals of Schools prove that in their case also the book is of the greatest value.

J. & J. PATON, EDUCATIONAL AGENTS,

143 CANNON STREET, LONDON, E.C. 4.

Telephone: Central 5053.

A SELECTION OF CLASS BOOKS ON MATHEMATICS, CHEMISTRY, AND PHYSICS FOR SECONDARY SCHOOLS.

Mathematics and Mechanics.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. **3s. 6d.** With Answers. **4s.**
"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association*.

Algebra, School. By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **7s. 6d.**
"The author has brought the work into closer touch with intelligible calculations, and, at the same time, gives a clear account of the elements of algebraic theory."—*Schoolmaster*.

Algebra, School (Matriculation Edition). By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **6s. 6d.**
"As a school textbook this volume has much to recommend it, the examples and test papers being carefully chosen."—*Mathematical Gazette*.

Preliminary Arithmetic. By AUGUSTUS BARRACLOUGH, M.A., Second Master at Bournemouth School. **2s.** With Answers. **2s. 3d.**
"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian*.

Arithmetic, The Junior. By R. H. CHOPE, B.A. With or without Answers. **Third Edition. 4s.**
"No better Arithmetic for school work has come into our hands."—*Educational News*.

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc. This edition of the *School Arithmetic* covers the Senior Locals Syllabus, and is amplified by a large selection of examples arranged in Graduated Examination Papers. **4s. 6d.**
"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World*.

Arithmetic, Rural. By A. G. RUSTON, B.A., B.Sc. **5s.**
"We believe the book will be found just what is required in schools of agriculture."—*Secondary Education*.

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. **4s.**
"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster*.

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. (New and enlarged edition.) **6s.**
"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World*.

School Geometry (Matriculation Edition). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. **5s.**
Covers fully the syllabus for London University Matriculation.

Preliminary Geometry. By F. ROSENBERG, M.A., B.Sc. With or without Answers. **3s.**
"The author's object is, by blending practical and theoretical work at the outset, to avoid the unattractiveness of the purely theoretical textbook and the tendency to loose reasoning of the practical manual. In this he seems to have succeeded."—*The Journal of Education*.

Graphs, Matriculation. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. **1s. 9d.**
"The explanations are remarkably clear."—*Secondary Education*.

Hydrostatics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. **Second Edition. 3s.**
"The diagrams and illustrations are all very practical."—*Schoolmaster*.

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. **4s.**

Mechanics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. **Third Edition. 5s.**
"Affords beginners a thorough grounding in Dynamics and Statics."—*Knowledge*.

Trigonometry, Junior. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. **4s.**
"The examples given are numerous in each chapter, the diagrams and the arrangement practical."—*Secondary Education*.

Botany, Chemistry, Physics, &c.

Botany, Junior. By FRANCIS CAVERS, D.Sc. **4s.**

"Dr. Cavers has achieved a useful little book."—*Journal of Botany*.
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.

Botany, Senior. By FRANCIS CAVERS, D.Sc. **6s. 6d.**
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purposes underlie the manifold variations which plants assume."—*Nature*.

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. **Second Edition. 4s.**
"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine*.

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. **Second Edition. 6s. 6d.**
"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian*.

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. **4s.** Including preparations, experiments on action of heat, quantitative and qualitative analysis.

Chemical Calculations. By H. W. BAUSOR, M.A. **3s.** ADVANCED COURSE. **1s. 9d.**
"The calculations which are inseparable from Chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge*.

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. **3s.**
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **4s. 6d.**
"The information is accurate and up to date."—*The Journal of Education*.

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc. **Sixth Edition, Revised and Enlarged. 4s.**

"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster*.

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. **4s.**
"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. **5s.**
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature*.

Mechanics and Physics (Mechanics, Hydrostatics, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. **2s. 3d.**
"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Educational News*.

Science, Junior Experimental (Physics and Chemistry). By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. **Second Edition. 4s.**
"The explanations are clear, and we can recommend the work heartily."—*Secondary Education*.

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **6s.**
"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature*.

Sound and Light, Junior. By JOHN SATTERLY, D.Sc., M.A. **4s.**
"Reaches a high standard, with plenty of practical work."—*Guardian*.

Joint Agency for Women Teachers

OAKLEY HOUSE,
14, 16, & 18 BLOOMSBURY ST., LONDON, W.C.1.
(Under the management of a Committee appointed by
the Teachers' Guild, College of Preceptors, Head
Mistresses' Association, Association of Assistant
Mistresses, and Welsh County Schools Association.)

This Agency has been established for the purpose
of enabling Teachers to find work WITHOUT
UNNECESSARY COST. All fees have therefore
been calculated on the LOWEST BASIS to cover
the working expenses.

No Registration Fees are charged to Members of
the above Associations, and their commissions are
reduced.

Hours for Interviews (during August)—
11.30 a.m. to 1 p.m., and 3 to 4 p.m.

Saturdays, 11.30 a.m. to 12.30 p.m.

When possible, special appointments should be
arranged.

Registrar—Miss ALICE M. FOUNTAIN.

UNIVERSITY OF ST. ANDREWS. L.L.A. DIPLOMA FOR WOMEN.

THE SCHOLASTIC, CLERICAL & MEDICAL ASSOCIATION, LIMITED.

22 CRAVEN STREET, TRAFALGAR SQUARE LONDON, W.C.2.

Telegraphic Address: "TRIFORM, WESTRAND, LONDON." Telephone No.: Gerrard 1854.

Advice as to Choice of Schools.

A Register of Schools, Private Tutors, &c., is kept at the Offices of the Association, and Parents or Guardians may obtain, without charge, information and advice as to Schools for Boys or Girls (in all parts); Tutors for University, Civil Service, Legal, Medical, Naval or Military Examinations, and as to Educational Establishments of every kind. Prospectuses of Schools, &c., can in most instances be sent to applicants by return of post.

Appointments.

Principals requiring the services of qualified Assistant Masters or Governesses can, on supplying an outline of their requirements, obtain a list of those Candidates on the books of the Association likely to prove suitable.

Assistant Masters or Governesses requiring appointments are invited to make application to the General Manager of the Association. No preliminary fees are charged.

Transfers and Partnerships.

The Association undertakes the negotiation of School Transfers or Partnerships. Terms and particulars on application. All communications on this subject are treated as strictly confidential.

A prospectus, giving the names of the Directors of the Association, sent on application to the General Manager:—

Mr. A. V. STOREY,

22 Craven Street, Trafalgar Square, W.C.2.

MISS DYMHPNA SMITH'S EDUCATIONAL DEPARTMENT, 231 Ebury Street, S.W.1.—Principals needing good ASSISTANT MISTRESSES, now or in the future, should apply The REGISTRAR, as above. Private Governesses also supplied. (Miss Dymphna Smith interviews applicants personally, 11 to 1, or by appointment.)

Speech Training and Elocution.

MISS LAURA SMITHSON, L.R.A.M. Elocution A., Director of Stratford-on-Avon Shakespeare Festival Summer School of Elocution. Recommended by Sir Frank Benson, Miss Lilian Baylis, Ben Greet, Esq., William Poel, Esq. Elocution, Voice Production and Dramatic Training. Pupils prepared for L.R.A.M. Elocution Diploma. Schools near London visited. Stammering and other defects of Speech treated. Address—109 Abbey Road Mansions, N.W.8. North Country towns, including Newcastle-on-Tyne (Conservatoire of Music) visited weekly by Miss IVY SMITHSON.

ELOCUTION, Voice Production, Public Speaking, Reciting, Acting.—Miss ROSE PATRY, 3 Lower Seymour Street, W.1. Teachers and Reciters trained. Classes for adults and children held. Private lessons given. Stammerers treated. Schools visited by Miss PATRY and her assistants. Highest references. Prospectus forwarded. New term September 27.

MUNRO DAVISON

FOR LESSONS IN VOICE-PRODUCTION & SINGING. Professor of Singing, Guildhall School of Music (25 years.)

Vocal Licentiate, R.A.M. and T.C.L., F.R.C.O., &c. The experience of many years in individual Vocal training of teachers connected with Secondary Schools, Training Colleges, &c., has proved to me the value of systematic cultivation of the Singing and Speaking Voice. Singing, apart from providing an attractive recreation, constitutes a valuable aid to the health and nerves, thus materially assisting those engaged in the arduous work of teaching.—M.D. Address: 434 Seven Sisters Road, N.4.

PHYSICAL TRAINING, REMEDIAL GYMNASTICS, &c.

BRISTOL
PHYSICAL TRAINING COLLEGE.
30 APSLEY ROAD, CLIFTON,
BRISTOL.

TRAINING in Swedish and British Gymnastics for public examination. Tennis, Hockey, Cricket under a County player. Swimming, Massage and Remedial Gymnastics under a certificated Masseuse. Anatomy, Physiology, Hygiene.

Dancing, Ballroom and Ballet, Dalcroze Eurhythmics.

Students prepared for the advanced certificate of The English Folk Dance Society.

Residential fees on application to—The Misses JENNINGS, HOLBROW and COLSON.

THE LING ASSOCIATION
(And Affiliated Gymnastic Societies).
FOUNDED 1899.

Hon. Secretary: Miss HANKINSON, 67 Shaftesbury Road, Crouch Hill, London, N. 19.

EXAMINATIONS held for Swedish Gymnastic Teachers' Diploma.

The Association keeps a list of certificated Gymnastic and Games Mistresses—and publishes "Good and Bad School Postures," 7s.; Net Ball Rules, 4d.; Game of Net Ball and How to Play it, 7d.; Rounders Rules, 4d.; Scandinavian Dances, 3d.; Music to Dances, 9d. All post free. For these, and Terms of Membership, Conditions of Examinations, Entrance Forms, Syllabus, &c., apply to the HON. SECRETARY.

THE BERGMAN ÖSTERBERG
PHYSICAL TRAINING COLLEGE, Kingsfield, Dartford Heath, Kent.
See advertisement on page 515.

BEDFORD PHYSICAL TRAINING COLLEGE.
LING'S SWEDISH SYSTEM.

Principal: Miss STANSFELD
(President of the Ling Association of Gymnastic Teachers).

The object of the College is to train Students to enable them to become Teachers of Gymnastics and Games in Schools.

The Course of Training extends over two years, and includes the Theory and Practice of Gymnastics on the Swedish System, Massage and Medical Gymnastics, Anatomy, Physiology and Hygiene, Dancing, Lacrosse, Lawn tennis, Hockey, and Cricket.

An educational centre like Bedford affords special facilities for practice in Teaching and professional coaching in Games. Swimming and Boating in the summer. Fees: £140 per annum.

For Prospectus apply—SECRETARY, 37 Lansdowne Road, Bedford.

CHELSEA
COLLEGE OF PHYSICAL EDUCATION
FOR WOMEN.
(SWEDISH SYSTEM.)

Three Years' Diploma Course of University Standard. The training afforded to students at this College enables them to secure appointments of the Highest Standard. Applications for admission next term should be made now.

Apply for Prospectus to Miss DORETTE WILKIE (Room 85), S.W. Polytechnic Institute, Chelsea, London, S.W. 3
Tel.: Kensington 899.

New Session begins Tuesday, September 28th, 1920.

LIVERPOOL PHYSICAL
TRAINING COLLEGE,
BEDFORD STREET, LIVERPOOL.
LING'S SWEDISH SYSTEM.
Principal: Miss IRENÉ M. MARSH.

For Ladies as Gymnastic and Games Mistresses, and Medical Gymnastic Teachers and Masseuses.

University Tutorial Press.

SELECTED :: EDUCATIONAL :: BOOKS.

Botany and Nature Study.

The Senior Botany. By FRANCIS CAVERS, D.Sc. *Second Edition.* 6s. 6d.

A school course of Botany in which great stress is laid on outdoor and indoor observation and experiment.

Junior Botany. By FRANCIS CAVERS, D.Sc. 4s.

Suitable for use in Junior forms: encourages observation and experiment on living plants, and the study of adaptation to environment.

Textbook of Botany. By J. M. LOWSON, M.A., B.Sc., F.L.S. *Fifth Edition, Revised and Enlarged.* 9s. 6d.

The standard is that usually required for University Intermediate Examinations. The chief aims are simplicity and clearness of statement as regards both facts and principles.

A First Course in Plant and Animal Biology. By W. S. FURNEAUX, 3s.

The object of this book is to provide young beginners with a course of Nature Study closely in touch with scientific methods.

Life Histories of Common Plants. By FRANCIS CAVERS, D.Sc. 4s. 6d.

The greater portion of the work is devoted to detailed instructions for the study, by observation and experiment, of typical plants.

Practical Botany. By FRANCIS CAVERS, D.Sc. *Second Edition.* 6s. 6d.

In addition to the ordinary practical work this book also contains experiments on the Physiology of Plants and their response to external stimuli, and on the Chemistry of Plant Substances.

Languages, History, and Geography.

Junior English Grammar with Parsing and Analysis. By A. M. WALMSLEY, M.A. *Second Edition, Revised and Enlarged.* 3s. 3d.

Based mainly on inductive methods. The recommendations of the Joint Committee on Grammatical Terminology have been completely adopted throughout.

The Matriculation English Course. By W. H. LOW, M.A., and JOHN BRIGGS, M.A., F.Z.S. *Third Edition.* 5s.

A graduated course in English grammar, composition, and précis-writing.

An Anthology of English Verse. For use in Schools and Colleges. With an Introduction and a Glossary. By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. *Second Edition.* 4s.

A selection of the best in all branches of English poetry, except the dramatic, from Wyatt to Swinburne.

The Tutorial History of English Literature. By A. J. WYATT, M.A. *Third Edition, continued to the present time.* 4s.

Attention is devoted to the important aspects of the work of the chief English authors, while tracing the development of our literature.

A Social History of England. By FREDERICK BRADSHAW, D.Sc., M.A. 6s.

An elementary account of the social and economic development of England.

Textbook of Geography. By G. C. FRY, M.Sc. *Second Edition, Revised and Enlarged.* 6s. 6d.

For the middle and upper forms of schools. Stress is laid on the inter-connection of Physical Geography and Political Geography. The present issue indicates territorial changes due to the War.

New Junior French Course. By G. A. ROBERTS, M.A. 4s.

A year's course in Reading, Grammar, and Translation into French, with material for oral practice, for use in the junior and middle forms of schools.

Direct French Course. By H. J. CHAYTOR, M.A. 2s. 3d.

With Vocabulary French-English. 3s.

This book is designed for use by pupils of 12 or 13 years of age who are commencing the study of French.

School Certificate Practice in French. By H. J. CHAYTOR, M.A. 2s.

Provides material for a weekly test in Unseens.

Applied Science.

Engineering Science, A First Course in. (Includes the Elements of Applied Mechanics and Heat.) By P. J. HALER, B.Sc., A.M.I.M.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. 4s.

Adopted by the Air Board for use in the Royal Flying Corps.

This book is intended for students who are taking a Preliminary Technical Course. It deals mainly with Applied Mechanics and Heat treated from an experimental and practical point of view.

Geometry (First Stage), Practical, Plane, and Solid.

By G. F. BURN, A.M.I.Mech.E. *Third Edition.* 3s.

A good introductory course in practical geometry.

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc., D.P.H. *Sixth Edition, Revised and Enlarged.* 4s.

A useful course for beginners in this subject, containing a short account of the elements of Human Physiology.

Hygiene, Second Stage. By A. E. IKIN, B.Sc., LL.D., and R. A. LYSTER, M.D., B.Ch., B.Sc., D.P.H. *Third Edition.* 5s.

An advanced course suitable for senior classes.

Electricity, Technical. By Professor H. T. DAVIDGE, B.Sc., and R. W. HUTCHINSON, M.Sc., A.M.I.E.E. *Third Edition.* 8s. 6d.

Giving a thorough acquaintance with the Elements of Practical Electrical Engineering on Sound Scientific Principles.

Electrical Engineering, Continuous Current. By W. T. MACCALL, M.Sc., A.M.I.E.E. 15s.

The book is intended to supply all that is required in the ordinary three years' day course in Technical Colleges.

Mathematics and Physics.

The School Arithmetic. An edition of *The Tutorial Arithmetic* adapted for school use. By W. P. WORKMAN, M.A., B.Sc. *Second Edition.* (With or without Answers.) 5s.

Those portions of *The Tutorial Arithmetic* dealing with the higher theory and all over-difficult problems are omitted.

Rural Arithmetic. By A. G. RUSTON, B.A., B.Sc., Science Tutor in the Department of Agriculture at the University of Leeds. 5s.

Specially suitable for use in secondary rural schools working under the schemes of the Boards of Education and Agriculture.

School Algebra. By A. G. CRACKNELL, M.A., B.Sc., F.C.P. With or without Answers. 7s. 6d.

A course of Algebra as far as the binomial theorem for positive integral indices, suitable for upper forms.

Preliminary Geometry. By F. ROSENBERG, M.A., B.Sc. With or without Answers. 3s.

This is a textbook for young learners, beginning the study of Geometry between the ages of 11 and 13. From the beginning the author insists on the learner's reasoning from first principles. The language used throughout is simple.

Magnetism and Electricity, Intermediate Textbook of.

By R. W. HUTCHINSON, M.Sc., A.M.I.E.E. 9s. 6d.

A course, both theoretical and practical, up to the standard of University Intermediate Examinations. Embodies the distinctive results of modern research.

Junior Experimental Science. By W. M. HOOTON, M.A., M.Sc., F.I.C. *Second Edition.* 4s.

A two years' course Physics and Chemistry, which students may commence when about 13 years of age.

Senior Chemistry. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSER, M.A. *Second Edition.* 6s. 6d.

A theoretical textbook for Upper Forms of schools, illustrated by a large number of experiments.

Junior Chemistry. By R. H. ADIE, M.A., B.Sc., Lecturer in Chemistry, St. John's College, Cambridge. *Second Edition.* 4s.

A two years' course of work for beginners.

For other announcements of the University Tutorial Press, see pp. 533 and 551.

OCCASIONAL NOTES.

THE London County Council, in their capacity as local education authority for the metropolis, have now completed the preparation of their draft scheme under the Education Act, 1918. As might have been expected, the document is large, extending to more than a hundred foolscap pages, and a number of diagrams and maps help to throw light upon the text. A brief historical and legislative retrospect is followed by an exhaustive account of activities during the period 1904-1920 in the fields of elementary education, secondary and technical education, evening institutes, university education, and special trade investigations. Then follows an account of developments under the Act of 1918, including the steps so far taken by the Council in respect of central schools, the upper classes in elementary schools, nursery schools, school libraries, day continuation schools, and adult education. The Council are alive to the fact that a special responsibility rests upon them in regard to education because London is not only a "locality" whose needs have to be met, but the heart of a world-wide empire, the centre of international finance, and the meeting place of nearly every race and people. In another part of this issue we return to this scheme and deal at greater length with some of its more interesting features.

NEARLY four years have passed since the Consultative Committee published their Interim Report on the provision of scholarships for a university, recommending a generous scheme of national scholarships for the encouragement of science and technology. The Board have now produced their regulations establishing such a scholarship scheme from national funds under Section 44 of the

The Board's
Scheme of
University
Scholarships.

Education Act, 1918 (Grant Regulations, No. 26). One hundred and eighty university scholarships are offered for the coming year; half are to be awarded to girls and half to boys. There is no limitation as to subjects, save that the awards are to be made on the results of the present Second Examination for Higher Certificates, supplemented, when it seems desirable and practicable, by the consideration of the candidate's school record and a personal interview. The amount of the scholarship is to be a sum, not exceeding £80 per annum, towards maintenance, plus a grant in aid of the approved fee. The scholarship is tenable for three years, but may be prolonged for a fourth. The holder must satisfy the Board that he has not sufficient means, either from private sources or from other scholarships, to follow a university course without their assistance. He must also satisfy the examining authority that he is capable of following successfully an Honours Course.

TWO criticisms occur. First, owing to the late date at which the regulations are published, no one has a chance for these National Scholarships who is not already entered for a Higher Certificate Examination. This narrows the field. Secondly, the figure £80 is inadequate for maintenance. Even in the newer universities the cost of board and lodging (not counting vacations) and the necessary books and instruments could not be put at less than £100 per annum at present prices. At Oxford and Cambridge, the ex-service men who received a maintenance grant of £175 per annum are already finding it inadequate. The cost of rooms, of establishment charges, of tuition, have all been raised since the figure was fixed at £175. No arrangement can be finally satisfactory which allows the university student to piece together his maintenance precariously from as many as three or four different sources. As things are, he gets part from his old school, part from his college, part from the local education authority, and adds to these some odd grant from a City company or from some denominational fund. It is high time that the local education authority should make itself responsible for seeing that every student going up to the university from its area had his money made up to an amount which would see him through, without undue stinting or carking care and the need of eking out his resources by casual labour.

BEFORE the next academic year begins there will be an election for a new professor of French at the University of London, in place of M. Gustave Rudler, who has been appointed Marshal Foch Professor at Oxford. This may be regarded as a test election, and will prove if we are going back to the pre-war habit of giving our highest modern language posts to foreigners, however worthy, or of retaining them for our own native scholars. The latter practice has always been followed in other countries, and thus modern-language scholars have been encouraged to fit themselves for posts which reward them for their efforts. In this country there has been little inducement to continue work beyond what is necessary for an appointment in a public school or a minor professorship, often with a mediocre salary. This leads to a low level of attainments. There is a vicious circle, for there are many

Professorships of
Modern
Languages.

who excuse the appointment of a foreigner by pointing to the lack of native talent; and the native talent does not exist because of the fewness of posts open to it. When we restrict the chief professorships to English men or English women, there should be an increase in the number of students of modern languages who will seriously prepare themselves for them. Assistant professorships could always be held by foreigners, who could help in those parts of the subject wherein they are most useful. We are glad to note that the University of London has declared that no foreigner can hold this professorship unless he has such qualifications as would permit him to hold a similar post in his own country.

THE annual report of the Board of Education for 1918-19, which is now available, provides some startling figures as to the size of classes in State-aided secondary schools. The Board's ordinary rule is that classes should not exceed 30 and may not exceed 35, yet on October 1, 1918, there were 2,274 classes in 599 schools with more than 30 pupils, and as many as 144 with more than 35 pupils; more, that is, than during any year of the war. It has sometimes even been necessary, as an emergency measure, to teach two forms together, and thus practically double the normal numbers. This regrettable condition of things is due to the growth in number of pupils in secondary schools at a time when it is impossible to provide a corresponding increase of accommodation. The Board sanction the acquisition of additional temporary premises whenever they provide reasonably satisfactory accommodation, and their occupation does not put too great a strain on the staff of the school. But it is in the direction pointed out in the recent circular of the Board, referred to on page 529, that relief of a permanent kind is to be sought. The attendance should be discouraged of pupils who are not intending to stay at secondary schools until sixteen years of age for the completion of at least a four years' continuous course. The presence of such boys and girls absorbs much needed accommodation, while the benefits they themselves receive are very doubtful.

SOME idea of the degree of importance which is attached to a course of training for teachers in secondary schools by governing bodies and the heads of such schools may be gathered by placing side by side two sets of figures from the recent Report of the Board of Education. On April 2, 1918, the number of full-time teachers employed in the 943 schools then on the Grant List was approximately 12,887—5,631 men and 7,256 women. The number of training colleges recognized for the year 1918-19 as providing courses of training for secondary schools was 19, of which 12 were training departments of universities or of university institutions. The total number of recognized students who followed courses of training in these institutions during the year was 126, of whom 11 were men and 115 women. In urging their claims to be regarded as a profession, teachers should be prepared to answer the objection often urged—for example, by doctors and lawyers—that, in view of the small number of persons who are trained for it, teaching can scarcely be considered as a profession in quite the same sense as medicine and law.

Size of Classes in Secondary Schools

Training of Secondary School Teachers.

THE fourth-year students in the Department of Education at the University of Manchester appear, according to a report in a recent issue of the *Times Educational Supplement*, to have been taking things in hand of late, by initiating reforms of the present methods by which they are trained. What seems to have happened is that the time-honoured methods by which undergraduate instruction is given, streams of talk followed by terminal examinations, have been applied as a matter of course to these students. Whether those methods are good for *any* students in *any* circumstances is a question upon which in these days there can hardly be two opinions, but that they should still prevail in a training college of all places is somewhat surprising. That students generally are over-lectured and over-examined, and that far too little opportunity is given for the play of individuality is, we think, incontestable; and, if these evils exist in training colleges, the students may well exclaim "Physician, heal thyself!", for no training college lecturer would fail to denounce such methods when used in a school. We do not in the least believe that things are worse at Manchester than elsewhere. That the system at Manchester should produce such thoughtful suggestions from the students is proof enough to the contrary. The fact seems to be that university methods require candid criticism quite as much as do school methods, and, in the absence of any other means, it is well that the criticism should be supplied by the students themselves.

AS a step towards educational reconstruction, the Kent Education Committee have adopted the recommendation of their Joint Advisory Committee regarding the curriculum suitable for children up to the age of eleven or twelve years. It is suggested that, in the case of pupils transferred to secondary schools, no school should demand more, and no child should expect to gain admission on less, equipment. No attempt is made, perhaps advisedly, to define the type or scope of religious and moral instruction. It is taken for granted that in all cases adequate arrangements will be made for it. It is also assumed that the merits of good manners, care of person, cleanliness and tidiness, will be recognized in all schools. For the rest of the curriculum, an outline of what is expected has been drawn up, dealing with language (including English literature), and the arts of writing and reading, handicraft (including needlework and drawing), mathematics (including the elementary study of number and space), history, geography, nature study, music, and physical training. If the Kent Education Committee equip the children in their schools with the prescribed foundation of knowledge and culture, they will succeed in doing what our national system has endeavoured to do during the past fifty years.

THE statistics relating to higher elementary schools are of interest. Higher elementary schools are few in number. They are, as their name implies, a natural development of the system of primary education, and, as a rule, they are intended to afford facilities for selected pupils of some promise who desire to prolong their education beyond the age of compulsion. In thirty schools in 1918 there were 3,166 scholars, thirteen and under fourteen years of age; the following year there

The Elementary School.

Higher Elementary Schools.

were 2,218 between the ages of fourteen and fifteen so that about 30 per cent. left when they were legally exempt to do so. Of 2,046 scholars (fourteen and fifteen in 1918) 62 per cent. had left the schools before attaining fifteen years of age. In ordinary public elementary schools in 1917 there were 606,199 children between eleven and twelve; in 1919 there were 404,775 between the ages of thirteen and fourteen, so that over 200,000 left before reaching the age of thirteen; but of these something under 25 per cent. found their way into higher elementary and secondary schools. It seems as though there will be plenty of work for school attendance officers when full effect is given to the Act of 1918.

THE wisdom of the Standing Joint Committee on Teachers' Salaries in attempting to solve the vexatious problem by differentiating between different districts of the country must be regarded with some doubt. It may solve some difficulties only to create many others.

Scales of Salary.

The rate of remuneration for class teachers for the metropolitan area, it is understood, has been settled. But what is the metropolitan area? It is contended, with good reason, that a scale applicable to teachers employed in the County of London should be applicable to teachers in contiguous districts, and if that claim is admitted the authorities of the Home Counties will either have to adopt the metropolitan scale for the whole of their areas, or have different scales for different districts, which must inevitably prove a constant source of difficulty and discontent. The Education Committee of the County Councils' Association is of opinion that it is only practicable for each authority to administer one scale in its area, and the probability is that the policy pursued in the case of the Civil Service and the Police should be adopted in the service of education. That is to say, there should be one scale of salaries applicable, according to qualifications and requirements, for all teachers employed in State-aided schools, whether they teach in the remote village or in the City of London.

ALTHOUGH the staff value of uncertificated and supplementary teachers is so much less than that of their certificated colleagues, they represent 37 per cent. of the women teachers employed in public elementary schools. The number, however, tends to diminish. In 1913-14 there were 71,766 certificated women and 50,121 uncertificated and supplementary (a proportion of 41 per cent.). In 1918-19 the former figure had increased to 78,484, and the latter decreased to 46,014. The idealists demand that only trained and certificated teachers shall serve, and in the past the authorities have done what they could to satisfy the demand by reducing the staff value of the practitioners who are not fully qualified to, in one case, one-third, and in the other a little more than half that of the certificated teacher. It is obvious, however, that under present conditions it is futile to talk about disposing of the services of so-called unqualified teachers, and even under normal conditions it is doubtful whether the country would be justified in meeting the expense of so staffing the numerous small schools in county administrative areas. Therefore, it is natural for uncertificated and supplementary teachers to put forward claims for adequate remuneration. The Lancashire County Council has already departed from the Burnham scale by agreeing

to a maximum of £200 for uncertificated mistresses and £155 for supplementary teachers.

AGRICULTURAL Committees, under the Ministry of Agriculture and Fisheries Act, 1919, are now in process of formation in the different county administrative areas. The duties and responsibilities of these committees are considerable, and very soon, no doubt, new duties and additional responsibilities will be invented for them by one or other of the numerous departments of a tireless Ministry. Meanwhile, the County Council is permitted to determine whether the new committees shall or shall not relieve education committees of agricultural education. Certain county councils already appear inclined to favour the transfer. It is to be lamented, we think, that there should be any necessity for two executive authorities dealing with education in one area. The principle is unsound, and its adoption may lead to undesirable complications. It should be sufficient for education committees, before embarking upon any enterprise directly affecting the agricultural industry, to consult the County Agricultural Committee.

THE report of the Agricultural Instruction Committee for the County of Bucks, with the exception of one or two new departures, might have been compiled a little more than twenty-five years ago. In those far-off days county councils were designing methods of promoting technical instruction in accordance with the Act of 1889 with the proceeds of the Residue Grant. The rural districts of the counties were invaded by lecturers in agriculture, horticulture, and poultry keeping; the itinerant school for butter and cheese making was to teach British farmers to compete with the Dane; manorial trials and demonstrations were designed to prove to the reluctant rural mind the economic values of artificial fertilizers. All these things will be found in the Bucks report. The important new departure is a result of the war rather than of educational development. The Committee have been responsible for placing and training ex-service men under the Officers' Agricultural Training Scheme. Eighty-five applications were received, and twenty-two of these were subsequently withdrawn. Of the remainder, forty-two are in training. Fifty-two farmers offered to take pupils under the scheme, and forty-four were approved. It is stated that, on the whole, the men in training are applying themselves diligently to the work and giving satisfaction to those responsible for their training.

PAY OF ARMY EDUCATIONAL OFFICERS.—The normal annual rates of pay for officers of the Army Educational Corps are as follows:—Second Lieutenant, married, £394; unmarried, £320; after two years' service, £448 and £375 respectively. Lieutenant, married, £448; unmarried, £375; after seven years' service, £503 and £429 respectively. Captain, married, £622; unmarried, £517; after fifteen years' service, £667 and £562. Major, married, £768; unmarried, £684; after five years as such, £868 and £784. Lieutenant-Colonel, married, £1,242; unmarried, £1,184. These rates compare very favourably with those in civil appointments, and, indeed, open out a promising career to the teaching profession. On the formation of the corps, vacancies exist in all these ranks and, though no applicant may confine his application to a particular rank, the Board of Selection will place candidates according to their experience and qualifications in the rank for which they are regarded as being most suitable.

ARMY EDUCATION.

BY Royal Warrant on June 14, the Corps of Army Schoolmasters was disbanded and an "Army Educational Corps" took its place. This is not a matter of mere renaming: the change marks an important advance. The old army schoolmaster was a capital fellow in his way, but it was a somewhat narrow way. It was not merely that he was shut in with all manner of regulations: this he shared with soldiers of all ranks. The trouble was that he was a warrant officer with no prospects. Only in circumstances so exceptional as not to be worth considering could he rise to commissioned rank: so he resigned himself to his fate and concerned himself unwholesomely with problems of status and saluting. The new organization stops all that. To men of ability in the new Educational Corps a commission will come in the ordinary course of promotion. A new army schoolmaster may not carry a marshal's baton in his service kit, but he can now look forward to a possible lieutenant-colonelcy. To be sure, there are only twelve lieutenant-colonels in the corps, but the mere possibility of attaining such a rank transforms the whole position. The establishment approved for 1920-21 is made up of 428 commissioned officers, 297 warrant officers, and 298 sergeants. Of the 1023 that thus make up the personnel of the corps it will be seen that 42 per cent. are commissioned. The change is startling, though no doubt the way has been prepared by the gradual infusion of commissioned rank into the teaching service during war conditions.

Naturally interest will be centred on the possibility of easy passage from the sergeant to the warrant officer group, and from that to commissioned rank. So far as paper regulations go, the provisions of the Army Order appear to be quite satisfactory. In practice, probably the larger number of commissioned posts will fall to officers already commissioned and holding a university degree with honours; but ample provision is made for the commissioning of warrant officers of the Army Educational Corps who pass a qualifying examination. Just as in civilian schools there will always remain a large residuum of teachers who do not rise above journeyman work, so there will always remain a proportion of army schoolmasters who do not rise above warrant rank; but the open career for the really able will revolutionize the standing of the whole teaching body.

As an inevitable consequence, the tradition of the army school will be changed. Hitherto pipe-clay methods dominated. The rigid methods of teaching and discipline that marked the ordinary elementary school in the past flourished with special energy in the schools for army children. Indeed, in the old days the army teachers could almost beat the civilian teachers as tested by the bad standard that then held the field. The new organization will give the army schools a chance of catching up with the newer ideals of the civilian schools. For the new teachers are to be trained, and will thus have a chance of being brought into touch with all the fresh ideas and ideals. Every commissioned member of the Educational Corps who is appointed under the permanent conditions must have had a year's training and have obtained an educational diploma. The details of these courses and the examination connected with them are not yet available, but, from our knowledge of the educational advisers concerned, we can rely upon their being up to date. The Board of Education will see to it that the military education scheme is not permitted to become segregated once again into unintelligent isolation. It is not enough, however, that the commissioned ranks should be kept abreast of educational developments, so the non-commissioned teachers are also to have a two terms' course of training; and, though they are not to be called upon to take a diploma, there is no doubt that the work of the course will be efficiently tested. Further, promotion will lie along the lines that lead to the diploma.

But, important as is the work of training the Army children, the Educational Corps will have the still more serious work of providing suitable education for the soldiers themselves. In relation to the men, the Corps will have two main functions.

First, it must carry on their education in such a way as to increase their efficiency as soldiers. This part of the work will no doubt involve a certain amount of compulsory attendance on suitable classes. But the second function will be to improve the men as human beings and to prepare them for a useful place in civil life when their period of service is completed. This part of training will fall naturally into two parts, a general and a special. In all probability, the general part will be left quite optional. It is doubtful whether men over eighteen in the Army should be compelled to continue their education while civilians of a similar age are set free. With regard to the preparation for civil life, however, things are a little different. This would consist largely of vocational training, the preparation of the men to enter at once on some skilled occupation. A case could be made out for compelling all men who have no skilled occupation to acquire such skill and practical experience as is possible under Army conditions. This could be done towards the end of the service period, and the experience of Army people about the end of the war and during the post-armistice period is such as to warrant the expectation that such a training would be welcomed by the men. In any case, the prospect is full of hope. By the time the Fisher Act is in full operation, the recruits will all have had a good education as they have been able to assimilate, and the new Educational Corps will have material that has been to a certain extent sifted. The trained Army teachers will be thoroughly qualified, first, to estimate the possibilities of each case, and next to suggest the best course. The elasticity of the 14-18 period will be carried forward into military education.

THE DRAFT SCHEME OF THE LONDON COUNTY COUNCIL.

IN another part of this issue we direct attention to the main lines upon which the draft scheme of the London County Council, as required by the Education Act of 1918, has been conceived. For the mass of detail comprised in the scheme there can, of course, be no substitute for the document itself, but we propose to select for comment some of the points in which we think our readers will be specially interested. We may premise that the London authority, like some other large and progressive authorities, had, in a measure, anticipated the developments contemplated by the Act, and that in the devising of a general programme for the next ten years or so such anticipations are naturally taken into account.

The statistics show that the secondary schools of London are, as a whole, extremely full, and that some are seriously over-crowded. The pressure is mainly felt in the residential districts on the South side of the river. It is estimated that the publicly recognized secondary schools in London should provide accommodation on the basis of one per hundred of the population. The proposals for the supply of additional accommodation will increase the boys' places from 18,300 to 21,000, and the girls' places from 18,800 to 20,200. Even so, the figures fall short by about 1,500 and 2,300 respectively of the estimate of one place per hundred of the population. It is explained, however, that the proposals now put forward represent the minima which should be undertaken without delay. As to the private schools, it is clear from the few paragraphs devoted to them that, in one way or another, they will have to submit to inspection with a view to recognition—an arrangement which no good school needs to fear and which a poor school ought to fear.

As regards university education, the Council had, just before the outbreak of war, come to conclusions which were in substantial agreement with those of the Haldane Commission. Among the difficult questions to be dealt with are the relations between the internal and the external sides of the university and the relation to the Senate of the numerous institutions of university rank. As to the latter, the Council

will have to consider whether all applications for grants should be made through the Senate, with reports from the Senate as to the relative urgency of applications. In the view of the Council, a university course for all teachers should be aimed at, and we think the Council will pursue a wise policy if they adhere to their intention of organizing the existing training colleges in such a way as not to hinder their ultimate development into schools of the University.

We directed attention in April last to the provision of day continuation schools in London, and the scheme then commented on now forms part of the general scheme. As a first provision, 22 schools are to be established, each providing 360 places; but, as each pupil will attend only two half-days out of ten, this will allow for an enrolment of 1,800 pupils in each school. These 22 schools are to be opened as soon as possible after January 1, 1921. Manifestly such a scheme will need very careful administration and anxious watching during the early stages of its history. If these schools are to answer their purpose, it must be largely by way of personal influence; but it is clear that no principal of such a school can ever know the vast majority of his pupils. Only careful and skilful organization can overcome this difficulty.

Only a very brief paragraph is devoted to the problem of adult education, but we are glad to see that the Council fully sympathize with the movement and already support it financially. We are glad also to note that the Council are fully appreciative of the report of the Adult Education Committee, presided over by the Master of Balliol.

In the elementary department interesting references are made in the scheme to the future planning of schools. The suggestion is made that, whilst the administrative portions of buildings should be of a permanent character, the classrooms should be of light construction, susceptible of alteration, or even demolition, at a minimum of expenditure. This is a profoundly important matter, since there can be no question that bad methods of organization and teaching are apt to linger simply because existing buildings of solid and expensive structure are hopelessly unadaptable. The question of open-air teaching is an instance in point. To the Council's intentions regarding central schools, the upper classes in ordinary elementary schools, and school libraries, we have recently referred in these columns; and we are glad to note, in addition, that Shakespearean performances, to which the "Old Vic." has given so strong an impetus, are to receive definite financial support. Altogether, the Council are to be congratulated upon having produced a promising scheme, and upon having in some respects given a lead to the rest of the country.

THE MANCHESTER COLLEGE OF TECHNOLOGY.

PRINCIPAL GARNETT has resigned the principalship of the Manchester College of Technology. The questions raised thereby are of more than local importance. The policy of Principal Garnett has been to develop the Manchester Municipal School of Technology (as it was first called) into an institution of university rank. This was the original purpose with which the college was founded. The parallels of Charlottenburg and the Massachusetts Institutions of Technology at Boston were freely quoted at the time, and the Chairman of the Education Committee, with Mr. J. H. Reynolds (the first Principal), appeared before a Committee of the Privy Council in support of a proposal that the new University Charter for Manchester should provide for a Faculty of Technology. This was adopted, and the Principal of the College is *ex officio* the Dean of the Faculty of Technology of the university.

For many years the difficulty was to find a sufficient number of students of matriculation level to man the courses that were provided. Since Principal Garnett came on the scene, however, eight years ago, the number of such students has in-

creased more than sixfold, and the standard of the degree work has risen markedly. Last year there were 560 full-time university students in the College of Technology. Following this policy, Principal Garnett has been able to attract professors of such calibre as Professors Miles Walker and Gerald Stoney to the college. What the higher level has meant to the country during the war is set forth in a special volume of record published at the instance of the War Office. What it means to the great engineering and textile industries centred in Manchester one need not particularize. Manchester, at any rate, does not question it, for, though it has been slow to respond to the appeal of the university, it raised some £120,000 for the College of Technology without any beating of tom-toms. At the same time, the college has provided day apprentice classes, and has no fewer than 4,500 students in attendance in the evening.

Now the Education Committee have decided to curtail the university side of the work by restricting the entry next October to 80 students, plus the scholars elected on the present Higher Certificate Examination. The Principal contends that there is room for 240, and, rather than see the work truncated to which he has applied himself with so much devotion and success, has resigned. The College of Technology is unique in this country as an institution of university standard governed by a local education authority. Such a *dénouement* makes one doubtful as to the capacity of a local authority to undertake such a duty. Indeed, this would seem to be a case which would properly be handled by one of those Provincial councils which were foreshadowed in Mr. Fisher's first Bill, but dropped in the second. An institution which serves a whole district should be managed and supported by the district as a whole. The future of the Manchester College is, indeed, a matter of national concern. Before the war there were only 5,000 full-time students of science and technology in the United Kingdom, as against 17,000 in Germany and 34,000 in the United States. On all sides industry calls out for technical experts and scientific research. One speaker at the City Council stated that a firm of engineers which wanted 130 highly trained men of the kind that could only be supplied by the Manchester College of Technology or from the Imperial College of Science, could not secure more than 28 men sufficiently advanced for the purpose. This shortage of trained men, already making itself felt before the war, accentuated by the loss of so many young university men in the war, will be more serious than ever now as the result of this reversal of policy on the part of the Manchester Education Committee.

But another question is raised, which is no less serious. The whole development of our education is put in the hands of our local authorities. What sort of men are needed to carry it out? Clearly the time calls for purposeful pioneers, men of architectonic gift, the creative ability and directive mind. But such men will not submit to be treated as Principal Garnett has been treated by his local education authority. Because of a letter written to applicants for admission, in which he reflected indirectly on the policy of his Committee, Principal Garnett's conduct was censured as "reprehensible, and an act of disloyalty which must not be repeated." Further, though the Principal expressed his regret, this resolution was communicated to the Press without a word of explanation, without even producing the letter to which it referred. No man of spirit will submit to treatment like that. If local committees want tame rabbits, they may have them; they will get them cheap. But, if they wish for men of spirit, the only men who can serve the national purpose which these local bodies are empowered to carry out, they must at least treat them as Principals, not as subordinates.

CAMBRIDGE LOCAL EXAMINATIONS.—The July Cambridge Local Examinations were held at 255 Centres in the United Kingdom and 15 Centres in the Colonies. The total number of Preliminary, Junior, Senior, and Higher School Certificate candidates is 9,084. The Regulations for 1921 may be obtained from Mr. J. H. Flather, Syndicate Buildings, Cambridge.

PERSONAL PARAGRAPHS.

MR. E. BARKER, Fellow and Tutor of New College, Oxford, whose appointment to the office of Principal of King's College, London, in succession to the late Dr. R. M. Burrows, has received the approval of the King, is an Old Boy of Manchester Grammar School and a native of Cheshire. He entered Balliol as a scholar and took a First in Honour Moderations, a First in Greats, and a First in the School of Modern History. He became Craven Scholar and a Fellow of Merton College. Among his publications are included "Ireland in the Last Fifty Years," "Mothers and Sons in War Time," and "The Future Government of India." He has also been a contributor to the Encyclopædia Britannica and the Cambridge Medieval History.

* * *

THE appointment of Mr. P. J. Hartog, Academic Registrar of London University, as Vice-Chancellor of the new Dacca University in Bengal, is in conformity with the spirit of the recommendations of the Sadler University Commission that the Vice-Chancellor should be an officer of academic standing, distinguished record, and ripe experience—one who would be equal to the heavy responsibility of creating the University as a living reality. Since his appointment as Academic Registrar in 1903, Mr. Hartog has worked unsparingly for London University, and many of the advances made on its teaching side have been due to the policy which he set up. He has been largely responsible for the movement for unification which has characterized the recent development of the University, and he took a leading part in the promotion of the Paris-London Universities Entente of 1906 and 1907. It was his organizing power and enthusiasm which overcame the difficulties met with in the creation of the London School of Oriental Studies. London University can ill afford to lose Mr. Hartog, but his valuable work on the recent Sadler Commission and his sympathetic knowledge of Indian needs, together with his personality and experience, serve to emphasize the foresight shown in appointing him to his new position.

* * *

MR. C. B. HEBERDEN, who has resigned the principalship of Brasenose College, Oxford, after thirty-one years' tenure, received his early education at Harrow, and began his university career at Balliol College in 1869. He took first class in Classical Moderations and also in Lit. Hum. Appointed Fellow and Lecturer of Brasenose in 1872, he became tutor and proctor in 1881, vice-principal in 1883, and principal in 1889. He was formerly a member of the Hebdomadal Council, and from 1910 to 1913 he filled with distinction the position of Vice-Chancellor.

* * *

THE impending resignation of the Rev. Owen Prys from the principalship of the Theological College, Aberystwyth, announced in the press, will be received with general regret. During his thirty years' tenure as principal he has been mainly responsible for many changes. The college was transferred from Trefecca to Aberystwyth with the view of securing the advantages arising from close proximity to a university college, and the creation of the theological faculty contributed largely to the advances made in the post-graduate work of Welsh theological colleges.

* * *

THE REV. W. HOLLOWELL, head master of Calday Grange Grammar School, West Kirby, since 1891, has resigned his position to take up the living of Christ Church, Higher Bebington, in the gift of the Dean and Chapter of Chester Cathedral. Mr. Hollowell was educated at Owens College, Manchester, and Trinity College, Dublin, and was formerly a member of the staff at Warrington Grammar School.

* * *

MISS STEPHEN is resigning the principalship of Newnham College in October next. The Governing Body have appointed

as her successor Miss B. A. Clough, a niece of Miss A. J. Clough, first principal of the college, who was a sister of the poet, Arthur Hugh Clough. Miss Clough has been tutor-in-charge of Clough Hall since 1896, and vice-principal of the college since 1917.

* * *

MISS E. M. TALBOT has been appointed Principal of Cherwell Hall Secondary Training College for Women, Oxford. Miss Talbot took the Final Honours School of Natural Science, Oxford, Class I, and the Oxford Diploma in the Theory and Practice of Education with distinction. Since 1919 she has been tutor to the women students under the Delegacy for the Training of Teachers in the University of Oxford.

* * *

DR. GODFREY H. THOMSON has been selected by the Council of Armstrong College, Newcastle-on-Tyne, to occupy the Chair of Education, rendered vacant by the resignation of Prof. Mark Wright. Dr. Thomson, who is a D.Sc. of Durham and Ph.D. of Strasburg, had a distinguished career at the University of Durham. He entered with the Senior Entrance Exhibition, and obtained the Junior Pemberton Scholarship at the end of his first year, the Charles Mather Scholarship in his second year, and the Pemberton Fellowship on the completion of his third year. He has had a considerable experience in teaching, and has been on the staff of the Teachers' Training Department at Armstrong College since 1906. He has contributed largely to scientific and educational literature, and has conducted valuable research work.

* * *

THE Council of the Teachers' Guild have appointed as their new general secretary Captain A. J. H. McCleesh, head master of the Royal Hibernian School, Dublin, and inspector of Army schools. Captain McCleesh is taking up his duties this month; and he has also been appointed secretary to the Conference of Educational Associations, which will hold its next meeting in January at University College, London.

* * *

MR. J. JAMES, who is to be the first director of education under the Barnsley Education Committee, has held the office of secretary and director of education for Cardiganshire for the last twelve years. Mr. James is an old boy of Llanarth School, Cardigan, and a former student of Aberystwyth College. He graduated B.A. London (Hons. English) in 1895, and M.A. (Classics) in 1900, and he has had experience in teaching at Beaumaris County School and Barry County School.

* * *

THE REV. A. D. CLARKE, sixth form master of Birkenhead School and formerly of Merton College, Oxford, has been appointed principal of Bolton Church Institute School. Mr. Clarke, who is a gold medallist of Christ's Hospital and a prizeman of Merton College, Oxford, took second class Classical Moderations 1901, and third class Lit. Hum. 1903. He was formerly on the staff of Dane Court Preparatory School, Parkstone, and previously an assistant at Leigh Grammar School.

* * *

DR. W. EDKINS, head master of the High Pavement Secondary School, Nottingham, since 1918, has been appointed head master of the Accrington Secondary School.

* * *

THE KING has approved the appointment of Mr. William Graham, M.P., to be a member of the Cambridge Committee of the Royal Commission on Oxford and Cambridge, in the room of the Right Hon. Arthur Henderson, M.P., resigned.

* * *

THE EARL OF SELBORNE has been elected by the Fellows of Winchester College to be Warden of the College, in succession to Mr. J. P. Smith, who has retired, after holding office for the usual period of five years.

ONLOOKER.

TOPICS AND EVENTS.

REMOVAL OF BOARD OF EDUCATION OFFICES TO WHITEHALL.—The official address of the Board of Education is again Whitehall, London, S.W.1. The official telephone number is Victoria 9800. The Medical Branch of the Board is at Cleveland House, 19 St. James's Square, S.W.1. The Pensions Branch is at the Science Museum, Imperial Institute Road, South Kensington, S.W.7. The Examinations Section of the Board is housed at 49 Cromwell Road, South Kensington, S.W.7. The office of Special Inquiries and Reports and the Library will remain for the present at the Victoria and Albert Museum. With these exceptions, the whole of the Board's administrative staff is housed in King Charles's Street, Whitehall.

REGULATIONS FOR SECONDARY SCHOOLS.—The Board of Education have decided to make no change this year in the regulations for secondary schools. The regulations in force for the school year 1919-20 are therefore continued for the school year 1920-21. They recognize that certain provisions of the regulations may call for reconsideration at an early date, but this cannot advantageously be undertaken until the Board have before them the recommendations of the Committees on the Teaching of Classics, on the Teaching of the English Language and Literature, and on Scholarships and Free Places. The Board, however, call the serious attention of local education authorities and school governing bodies to the great waste of public money and educational effort involved in the withdrawal from secondary schools of so many pupils before they reach the age of sixteen—that is to say, before they reach the age at which the distinctive influence of the secondary school takes full effect upon the pupil. Now that the schools are crowded, and numbers of children have to be refused admission, the mischief of premature withdrawal is aggravated; for those who leave early are not only themselves failing to take advantage of the opportunities which the schools offer, but are keeping out others who might do so. The Board aim at securing that a much larger number of children shall be enabled to receive full-time education after the age of fourteen, and believe that the provisions of the Education Act of 1918 will greatly facilitate the attainment of this object; but it is not the policy of the Board that the secondary school should be diverted from its proper function, and they cannot acquiesce in a continuance of the waste of the available accommodation in secondary schools, the rapid augmentation of which in present circumstances is peculiarly difficult. The Board give notice of their intention to take steps in the regulations for 1921-22 to make their grant dependent upon the school-life of the pupils extending at least to the age of sixteen, except where adequate reason can in individual cases be shown for earlier withdrawal, and they will be glad to learn in due course what steps local education authorities and school governing bodies have taken, or are proposing to take, to comply with this condition.

THE ESPERANTO CONGRESS AT THE HAGUE.—The International Esperanto Congress will take place at The Hague from August 8 to 15, and a successful and important meeting appears to be assured. As evidence of the interest now being taken in the international language, it may be mentioned that the Secretariat of the League of Nations is sending an official delegate to The Hague Congress to report upon the suitability of Esperanto for international purposes. Among the ordinary members of the Congress some twenty countries will be represented. The British Esperanto Association, 17 Hart Street, London, W.C.1, will give further particulars to inquirers.

THE UNITY HISTORY SCHOOLS.—The Schools arranged by Mr. F. S. Marvin, Staff Inspector of the Board of Education, will be held again this year at Woodbrooke, from August 14 to 23. The subject will be "The Path to Peace," and will form a historical introduction to the League of Nations. The general idea is to present the earlier steps of a process which, in our time, has culminated in the inauguration of the League by the recent Peace Treaty. All inquiries should be sent to the Hon. Sec., Mr. Edwin Gilbert, 78 Mutley Plain, Plymouth.

THE SELBORNE HOLIDAY PROGRAMME.—The Selborne Society's Ramble Section (83 Avenue Chambers, W.C.1) announces its holiday programme, which comprises (a) a week on the Thames by private launch (August 16 to 21), preceded by a visit to Oxford, (b) a motor tour to Wiltshire, Dorset, and Hampshire (September 6 to 11). Full descriptive accounts will be given, permission having been obtained to visit many places not usually accessible, and all arrangements will be made for those attending. These tours are

being held during school holidays, to enable teachers to attend, and special consideration will be given to their requirements.

CENTRAL SCHOOL OF SPEECH-TRAINING.—The Dramatic Examinations of the Central School of Speech-training and Dramatic Art were held in July for the first time, under the direction of the Council of the Actors' Association. The examiners were Miss Helen Haye, Mr. Fisher White (appointed by the Actors' Association), Miss Lena Ashwell, and Mr. Lewis Casson; and on the final day, when the programme consisted entirely of Shakespearean selection, Mr. Ben Greet. The only prize given in the school, the Gold Medal, was won by Miss Margaritha van Holsteyn.

THE MEETING OF PROFESSORS OF ENGLISH.—The University of London is to be congratulated on the enterprise which made possible the valuable conference between American and British Professors of English last month. The Government, the British Academy, the Lord Mayor, and many learned associations all assisted in providing opportunities for the delegates to come into contact with kindred minds and to see places and objects of interest to scholars. The social functions were, however, only an addition to the serious work of the conference which met for five sessions. Points of immediate importance and special interest were discussed. American teachers gave the results of their experience and told their English colleagues of the development of English studies in the universities of the United States. English scholars and teachers presented the British point of view, and gave an account of the activities of some of the learned societies working for the common object of furthering scholarship and widening knowledge. Perhaps the most striking fact which emerged was that, whilst the bulk of English speakers seemed to regard the classics as the pivot of humanistic studies, the American delegates pointed out that in the United States the study of English had taken this central position. In America they believe that English should be a compulsory subject in every university course, and one delegate was able to speak of the valuable work in English which was being carried on in a large School of Technology. Valuable information was given concerning the School of Play-writing at Harvard University by its originator and director, Prof. G. P. Baker, and the School of Journalism at Columbia University by Prof. J. W. Cunliffe. That the work of the conference should have permanence, a joint Anglo-American Committee of ten was set up to act as a clearing house for research and to serve as a link between English scholars on both sides of the Atlantic. It was obvious that, whilst the points of view of English and American teachers of English are in many respects much closer than one might have expected, there is much that each group can teach the other. Ideas were exchanged in private as well as in public, and every delegate came away with the assurance that whenever he crossed the Atlantic he would be welcomed by friends in his own profession.

INTERNATIONAL FEDERATION OF UNIVERSITY WOMEN.—Representatives of nearly all the civilized countries of the world attended the first Conference of the International Federation of University Women which was held, from July 12 to 14, at Bedford College. The United States and Canada were particularly strongly represented. It is only within the last few months that the idea of a world-wide league of educated women has become known in other countries, but the general response has been prompt. The speeches and discussions at the meetings were characterized throughout not only by lively intelligence and apprehension of the various subjects under consideration, but also by an unmistakably sincere desire that nothing should be allowed to hinder the growth of international relations that could be prevented by the exercise of good feeling and good sense. The aims of the Federation were admirably outlined by the President, Prof. Caroline Spurgeon, of Bedford College, in her opening speech, and she was ably supported by Dean Virginia Gildersleeve, of Barnard College, New York. Lord Grey of Fallodon, who is thoroughly in sympathy with the objects of the Federation, gave an address on the same occasion on "The Value of Knowledge in International Relations." Reports on the systems of higher education for women prevalent in the countries represented were made and the constitution and by-laws of the Federation considered and adopted. The central office is established at 50 Russell Square, W.C.1, and the Secretary will be glad to supply information as to the schemes for international scholarships, interchange of lecturers and teachers, and the organization of hospitality for foreign students in each country to any interested inquirers. The President of the Federation, Prof. Spurgeon, is herself going to America this autumn as an "exchange" professor to lecture at Barnard College, and during the

spring three representatives of the British Federation of University Women (Prof. Spurgeon, Prof. Winifred Cullis, and Dr. Smedley MacLean) visited the States as the guests of the Association of Collegiate Alumnae and spoke on the work of the International Federation in the universities and women's colleges. The next Conference of the Federation is to be held in 1922 at whatever place is established as the head-quarters of the League of Nations.

A PERMANENT LINK WITH FRANCE.—For the past ten years a valuable work has been quietly carried on in London by the French Institute, or, to give it its full French title, "L'Institut Français du Royaume Uni," which is linked with the University of Lille. It has acted as a centre of French culture in this country, and the value of its work in strengthening the Entente has been recognized in a practical manner by both the British and the French Governments. Its headquarters, which were formerly at Marble Arch House, have been removed to Cromwell Gardens, where a block of houses, facing the Victoria and Albert Museum, has been placed at its disposal. The alterations necessary to fit the premises for the varied work of the Institute are nearing completion, and arrangements are being made for their formal opening in the early autumn by a distinguished Frenchman whose name we are not at present at liberty to divulge. A great expansion of the work undertaken by the Institute is in contemplation. *Lycées* for boys and girls are being organized, in which children of both English and French parents will receive instruction by highly qualified French teachers on the best modern French lines. There will no longer be any need for parents to incur the risk and expense of sending their sons and daughters to France to complete their education; they will be able to have them thoroughly prepared in London for French degrees. Courses of instruction in the French language will be given to adults, and advantage is already being taken by the Post Office and the Institute of Bankers of the facilities offered by the Institute in this direction. The Council intend to make a feature of the popular evening lectures which will be delivered in French on a variety of subjects by competent lecturers. When completed, the Institute will possess a hall capable of seating between 300 and 400 persons; a library furnished with some thousands of volumes of classical and contemporary French literature and the leading Paris and French provincial journals; while the handsome reception and writing rooms will answer all the purposes of an Anglo-French club.

KEBLE COLLEGE JUBILEE.—There was something quite medieval in the splendour and lavishness of the hospitality given by Keble College to its past members on the occasion of the Jubilee which was celebrated on June 22, too late for us to notice it last month. About one thousand old members of the College took part in the proceedings, which had been arranged with care by the authorities, assisted by the arduous efforts of the undergraduates. The Bishop of Winchester, the first Warden of the College, preached the sermon at the service held partly in the quadrangle and partly in the chapel. In his sermon, he said that the College had become an historic institution with a past behind it, and that to-day they thanked God for many hopes fulfilled, for work accomplished, for position recognized, and usefulness acknowledged. After the service a presentation was made in the quadrangle to the late Warden, Dr. Lock, now Lady Margaret Professor of Divinity, who had been connected with the College for fifty years and who for twenty-three years had been its head. Some 500 assembled in the College hall to luncheon, the remainder being accommodated in a marquee in one of the quadrangles. The Warden (Dr. Kidd) presided, there also being present the Vice-Chancellor, the Bishop of London, Sir Charles Oman, the Bishop of Winchester, the Presidents of Magdalen and Corpus, Prof. Medley, and Canon Newbolt. The Vice-Chancellor read a letter from Lord Curzon, expressing his great regret that, owing to the Conference at Boulogne, he would not be able to be present at the Jubilee. "I had looked forward," wrote Lord Curzon, "with real pleasure to the opportunity of testifying to the great services which Keble College, under the guidance of a singularly able and devoted series of wardens and tutors, has rendered to the University, to the Church, and to the cause of higher education. . . . The College has during the fifty years of its life set a standard, created a tradition, and provided a teaching that has never been surpassed in the corresponding history of any academic institution. Keble now stands solidly founded not merely in the affections of its sons, but in the admiring respect of the entire community, whose confidence it has won not by promise but by achievement. . . ." The Vice-Chancellor then proposed the toast of the College, to which the Warden and the Bishop of London responded. In the marquee the Provost of Oriel proposed the toast of the College in an eloquent and witty speech, which was replied to by the Primus

of Scotland and Lord Hugh Cecil in speeches no less brilliant and humorous. A meeting was held, at which it was decided to form an association of old Keble men for the purpose of keeping touch with the College and of providing a scholarship for the sons of old Keble men and assisting any past members of the College who might have become in need of help.

THE KINEMA IN THE TEACHING OF GEOGRAPHY.—A valuable investigation of the use of the kinema in geographical teaching has been carried out by members of the Northampton Branch of the Geographical Association. With children under eleven years of age a series of oral tests proved conclusively that those who saw films gave much better descriptions than those who did not, whilst those who had lessons previously to the showing did far better. With children of eleven to twelve, twelve to thirteen, and thirteen to fourteen, more elaborate experiments were made. Three groups of children (*a*, *b*, and *c*) of each of these ages were selected, and two selected films showing "Lumbering in the Sierra Nevada" and "Orange Growing, Cleaning, Sorting, and Packing," were used. The children in Group *a* had a lesson on the subject of one of these films and also had the film explained to them beforehand; those in *b* had no lesson and had no previous knowledge of the title of the film; whilst those in *c* did not see the film at all, but had a lesson supplemented by the reading of a selected description. Four days later the children were required to write descriptions; all proved to be good, *a* being slightly better than *b* and *c*. Six weeks later, further descriptions were required, and *a* were much better than those of *b* and *c*, which were of equal value. An additional experiment was tried with those of thirteen to fourteen years. Without previous warning, descriptions of orange culture were required from those who had seen the film but had no lesson, and also from a group of children in the same class who had neither seen the film nor heard the lesson. The descriptions of the former were only a little better than those of the latter, who had apparently gained their information by previous questioning of the others out of sheer interest, or from external sources such as the *Children's Newspaper*. It would seem that, once a child can form correct impressions from maps, descriptions, books, &c., films are of value only occasionally, and for purposes suited to special cases. The descriptions written after a further experiment in which the children were shown four equally attractive films on the same occasion, showed that, whilst those of the first film were good in every case, those of the last were poor. From this, the Northampton investigators conclude that not more than two films of ten to fifteen minutes each should be shown at any one time, and they recommend that the second should be one of general interest. We congratulate the Northampton Branch of the Geographical Association. Not until there exists something approaching agreement as to what is the most useful type of film for educational purposes, and how it should be used, will it be possible to ensure an adequate supply.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

New York has strict rules to enforce compulsory attendance at school. Now, New York is acute-minded, and perceives that children cannot be compelled to attend school if there are no schools, that there will be no schools if there are no teachers, and that there will be no teachers if men and women can earn more by unskilled labour than by teaching. Accordingly, New York has decided to save the children by fixing an attractive scale of salaries for those who instruct them. The minimum salary of an elementary teacher is to be 1,500 dollars; the maximum for grades kindergarten to 6 B, 2,875 dollars, and for grades 7 to 9, 3,250 dollars—the amount of increase ranging from 600 to 1,570 dollars. Classroom teachers in high schools will receive from 1,900 to 3,700 dollars. Elementary-school principals are to begin with 3,700 dollars, and to reach 4,750 dollars in five years. Principals of high schools will get 5,500 dollars in their first year of office, and in three years be advanced to 6,000 dollars. How many head masters of secondary schools in England can claim £1,200 a year after a triennium of service? New York offers to our educational authorities a noble example!

During the war thoughtful observers were amazed at the ease with which public opinion was manufactured in all the belligerent countries. Prohibition has been carried in America rather by factitious sentiment than through a consensus of deliberate individual judgments. "A

How New York
deals with
"A Shortage of
Teachers."

The Making
of Opinion.

the present moment," says the Statement of Principles formulated by the American Religious Education Convention at Pittsburgh, "political and economic interests have at their disposal an effective technique for the making of public opinion. This technique includes the choice of facts that shall be allowed to reach the public; it includes also constant and often subtle appeal to emotions and prejudices. The whole constitutes an art of making up other men's minds for them." Both in America and in England the cinema is a powerful means of persuading the masses, and you may damn the character of a nation in the eyes of a nation by films of imaginary bestiality. It is time to protest against this herding of the blind, which, justly estimated, is indicative of a low standard of civilization. The only propaganda that education can approve is one which addresses itself to the reason of the individual. We should teach our children that their best opinions are those which they form for themselves, whilst we supply them with the means of rectifying continually the judgments to which they have come. Life should be, even for them, a quest of Truth. Too often in the past has the school treated passive receptivity as a virtue and intellectual curiosity as a crime.

Experimental psychology continues to excite much interest in the United States. At first it sought chiefly to measure the attainments of children in the group, and to analyse the results with a view to the improvement of class teaching. Dr. Buckner ("Educational Diagnosis of Individual Pupils," Teachers College Contributions, No. 98) has been investigating the possibility of "diagnosing" individual cases, so as to prescribe specific mental work for every child. Seventy-two boys in the experimental academic junior high school, recently organized at the Speyer School of Teachers College, furnished the subjects for the investigation. Eleven standardized educational and psychological tests and scales were administered to this group at three different times—February 1916, February 1917, and June 1917. But again we are met with vague results. The author finds "a considerable amount of relation between the ability of these pupils to achieve in these tests and the consistency or lack of variability in their achievements." In spite of disappointments, we believe that experimental psychology will have much influence on education in the future. At present it is in the embryonic stage. And it must be put before the public in a literary form—its Huxley has not yet come.

On February 1, 1919, the Carnegie Endowment for International Peace approved the scheme of the Institute of International Education; for internationalism in education will make for peace. The Institute has published its first Annual Report. It acts in co-operation with the American University Union and the American Council on Education. Among its functions are the sending of American professors in their Sabbatical years to represent America abroad, and the exchanging of students—college or school. Moreover, it has established bureaux in foreign countries, entertained foreign delegations, helped in the organization of international clubs, and published several helpful lists and descriptive pamphlets for the purpose of facilitating international educational relations. The seat of the Institute is 419 West 117 Street, New York City.

A recent protest has roused discussion in England on that hoary pedagogic theme—corporal punishment. America, too, has been examining it. Whilst, it is found, the statute books of at least twenty-five States of the Union still permit the teacher to administer corporal punishment to the unruly pupil, the school authorities of those States frown on the use of the rod except in very unusual instances. In many States the statutes are silent on the matter. There is high classical warrant for coercion by pain. The Stoic philosopher Chrysippus approved it. Horace's teacher, Orbilius, was *plagosus*, or prone to the tawse. Juvenal was caned on the band; and we are prepared to argue that Martial, who began to write epigrams as a boy, ought to have been birched if he was not. Fortified by old tradition, the English "grammar schools" taught with a free expenditure of physical energy; and it is a curious fact that the inculcation of Latin and Greek has always involved more violence than the teaching of mathematics or science. But for long the wish of good and wise men has been to put corporal punishment into the background, to appeal more and more to the reason, to invent new methods of attack upon folly, vice, and ignorance. Nevertheless, we doubt whether a commission of experienced head masters would recommend the total abolition of the cane. There are evils which it is better to crush by dubious means than to leave uncrushed; and subordination is a civic duty which the school must impress on the child in the kindest possible way, and yet ineffaceably.

FRANCE.

July and August are the sacred months of holiday courses, and in these courses German continues to be a prominent subject of instruction. In Switzerland the University of Basel has invited students and teachers, as in 1919, to browse for six weeks on German; in Alsace, at Strasbourg, the practical courses in German for Frenchmen and foreigners, which began with July, will end with September. To learn German, French schoolboys are being welcomed at Mainz by the head master of a French *lycée* there. The war struck heavily at German in French schools; but last year the October *rentrée* showed an increase in the number of pupils taking up the language. Candidates in the entrance examination for the Polytechnique and Saint-Cyr have been allowed since 1916 to choose between German and English, and most of them took the latter as easier; the Minister of War has decided that, from 1923, both languages shall be obligatory; for French engineers and officers must not be ignorant of either. The Association of Modern Language Teachers regards the decision with approval, whilst head masters of *lycées* would have it recalled, as being injurious to general culture. It is a French quarrel, not ours. Perhaps in English education languages have hitherto occupied too large a space. But as for German, no true man of science would advise contempt of the science unfolded in German; and in literature, even if the Germans ceased to be productive, they would have left imperishable memorials, to ignore which were sheer foolishness.

GERMANY.

During the War Germany was for most of us a sealed book. Now that the seals are gone, there are strange things to be read in its pages. Thus we learn that the war was caused by the German school. How so? you will ask. It made Germans—the common man, the artisan, the *Kaufmann*—so efficient that England could no longer compete with them in the markets of the world, and therefore called on France and Russia to crush them. "Die englische Bildung reichte eben nicht mehr aus, um dem deutschen Wettbewerb auf die Dauer erfolgreich begegnen zu können," says *Pädagogischer Jahresbericht* (1914-15, page xiii). Now nothing is left to Germany but her Idealism, and—"Von der Macht der idealen Kräfte legt nichts so sehr Zeugnis ab wie die Tatsache, dass der angelsächsische Mammonismus, der die Weltherrschaft antreten will, sich einen idealistischen Mantel umhängt"—Nothing attests the strength of ideal forces so strongly as the fact that Anglo-Saxon Mammonism, seeking now to dominate the world, hangs about itself a cloak of Idealism (*Zeitschrift für den deutschen Unterricht*, xxxiii, 12). But did not "the Siegfried of German Idealism" flee from his own soldiers? We give these two samples of German opinion because they occur in educational journals, and in order to deplore them. It is not for us to perpetuate bitterness.

German *Volksschullehrer*, or primary teachers, sustained a hard blow lately in respect of the category in which they were placed for salary. A theme of more general interest is the *Reichsschulkonferenz*, or Imperial School Conference, which, after several postponements, met on June 11. Not fewer than six hundred schoolmen, in addition to Government representatives, sat for ten days in the Reichstagsgebäude at Berlin—a session inconceivable in the old days, when the *Reich*, or Empire, recognized no duty or responsibility in connexion with German education as a whole. The three foremost subjects on the programme were: (1) the different kinds of school, their organic combination into an *Einheitsschule*; (2) questions of method and the significance of the various school subjects for education in general; (3) teachers, the training of teachers, participation of teachers in the conduct and administration of schools. In the discussions, marked opposition was shown between progress and reaction; on the subjects specified no decisive vote was taken. Nor would any resolutions have had binding effect, although the Conference was to elicit opinion that would determine the form of the new *Reichsschulgesetz*, or Imperial School Law.

Special committees worked on each subject proposed for consideration. From the principles laid down by the committee that dealt with the training of teachers we give brief extracts. All teachers form one class (*einen einheitlichen Berufsstand*), but, from the training received and the schools in which they serve, they resolve themselves into a series of main types. They all are to receive their basic preliminary training, in common with those who are preparing for other scientific, artistic, or technical careers, in general secondary schools leading to the university. The vocational training of teachers of every sort should be done in a *Hochschule*, the training being in its essential principles alike for all, but varied according to the type of teacher; for the *Volks-*

schullehrer it should last at least three years. In all cases this vocational training would comprise two parts: a general, pedagogic training, and a special (scientific, artistic, or technical) training. The pedagogic training should be carried on at a university by means of more or less independent institutes calculated to attract university teachers to this special task. Pedagogic *Hochschulen* ranking and equipped as universities would be allowed, but not the isolation of the *Volksschullehrer* in academies organized for them alone. Every *Volksschullehrer* must complete his training by taking up, at his own free choice, some special subject, scientific, artistic, or technical ("scientific" in the wide sense of the German *wissenschaftlich*). Teachers of every sort must have opportunities at the *Hochschule* to make acquaintance with the young of every social class. The training of women teachers should follow the same lines as the training of men; but for the women special courses of instruction in women's work must be arranged. Existing training colleges will be abolished by degrees, their extinction being completed by 1927.

It is progress in the air—a revolution on paper—you will say.

Comments. But those who know Germany best will best understand the significance of the changes proposed. The difference between *Oberlehrer* and *Volksschullehrer* is to go; every teacher is to be, as we have said, an apostle of *Wissenschaft*. The movement in Germany can hardly fail to produce an impulse in other lands.

CANADA.

The Ontario Report for 1919 states that, whilst the schools of the Province did not escape all the evil consequences that came from the all-disturbing War, they passed through the ordeal successfully. The year was marked by the passing of the Dominion Technical Education Act, which sets aside ten millions of dollars for the promoting of technical education in Canada, and of the Adolescent School Attendance Bill, by which provision is made to continue the education of the 80 per cent. of Ontario children whose training has hitherto ended in the public schools. Education in general thrives throughout the Province. That the schools supply stimulus to learn as well as teaching is indicated by the fact that the use of public libraries has doubled in the last ten years. Seventeen new public libraries were opened in 1919.

Inspector Waugh (Public and Separate Schools) writes words of more than local reference and of sage foresight. We quote in full the last paragraph of his Report. "The past two or three years have witnessed great changes in the educational system of the Province, especially in the direction of effecting new contacts between the home and the school, between the outdoor life of the child and his life in the school, between the world of things and the world of books, and it will be some time before the new content of the curriculum can be properly blended into the general course. Nature study, art, music, and hygiene will, as time goes on, present less and less the appearance of weighing down an overloaded curriculum, and will be found to have the effect of lightening and enlivening the studies which have for generations constituted the groundwork of education. In these strange and striving times, in the universal upheaval and unrest, it will be necessary for the educational worker carefully to observe the currents and cross currents of public opinion, the trend of the economic changes now taking place, the changing web of the whole social fabric. It will be necessary for him to reconstruct his theory and practice to suit whatever appears likely to be permanent and fundamentally sound in these changes, and perhaps not less necessary to resist to the uttermost what is merely specious and ephemeral. The world to-day looks to the schools more than to any other agency to heal and guard the past, and to direct and stabilize progress in the future."

PUPIL TEACHERS IN ARMY SCHOOLS.—It is officially announced that the employment of boy pupil teachers is not contemplated under the scheme of the Army Educational Corps, and that no new candidates will be accepted for such appointments. It is also announced that no new appointments as acting girl pupil teachers are to be made; but that acting pupil teachers appointed prior to April 7, 1920, will continue in their present employment, at the appropriate rates of pay, until they become paid pupil teachers or terminate their engagements. When no vacancy exists for a paid pupil teacher, supernumerary pupil teachers (without pay) may be employed at the discretion of the O.C. schools, in order to allow suitable girls, between sixteen and twenty-one years of age, who desire to become army schoolmistresses to gain experience of teaching in army schools.

CORRESPONDENCE.

THE AMBLESIDE METHOD AND SECONDARY EDUCATION.

To the Editors of *The Journal of Education and School World*.

SIRS,—The writer has already upon several occasions directed attention to the remarkable results that are being obtained in a number of public elementary schools, which are following the programmes and employing the methods of Miss Charlotte Mason. Much interest is being taken in the work which those schools are doing. They receive many inquiries and many visits. Naturally, however, a still greater interest attaches to the source from which the methods and their inspiration are derived—the Secondary Training College and the Practising School conducted by Miss Mason herself at the House of Education at Ambleside. The writer has on two occasions spent some delightful days there as Miss Mason's guest. He has watched the work done by the students and the children, and he would like to put on record something of what he saw.

Two of the lessons that he saw were of great interest, and, so it seemed to him, of much significance to all who are concerned with secondary education. The first was a French lesson given to the second-year students by the French mistress, a native of Tournai, who came to Ambleside in 1915. She had been teaching in England for some years, but had not previously come into contact with Miss Mason's methods. Those methods were exactly followed during the lesson. There was the book of recognized literary merit, the single reading, and the immediate narration—of course, in French. The book was Alphonse Daudet's "*Lettres de Mon Moulin*," and the story read was "*La Chèvre de M. Seguin*." Before the reading began, a few—a very few—words of explanation were given—of course, in French. Then the nine pages of the story were read straight through by the mistress, without pause or interruption of any kind, at the same pace that one would read an English story. The students followed by ear only: they had no books. As soon as the reading ended, on the instant, without hesitation of any kind, narration began in French, different members of the class taking up the story in turn till it was finished. All were good; some astonishingly good. To all, French was a tongue in which they could think and speak with considerable facility. Yet the time given to French is two hours and three-quarters a week only. Such results compel attention. It may be added that last year the writer heard a history lecture on the reign of Louis XI given in French by the same mistress to the then senior students, and the content of the lecture was narrated in a similar manner, with the same astonishing success.

The second lesson, a short lesson sandwiched between others as a demonstration for the visitor's benefit, was given by a student to Form V in the Practising School, girls whose age range was sixteen to seventeen and a-half. The form is reading Browning's "*A Death in the Desert*." The forty lines beginning, "Go back, far, farther, to the birth of things," were read straight through by the girls in turn, the rest following in their books; and again, without pause or hesitation after the one reading, narration began, and the girls in turn took up the paraphrase of the difficult lines in well chosen language, and with a precision that bore witness to their close attention, and to their thorough understanding of what had been read.

In every class it was the same. The oral narration and the written composition, and "reports" of lessons, were of extraordinary excellence. There had been interest, there had been close concentration, and the result was power, mastery.

Two other features in the methods compel the attention of those who are familiar with the work of the public schools and of the public secondary schools. The first is that interest, attention, and concentration are secured, and all the extraordinary results that flow from them are obtained, "without mark, prize, place, praise, or blame." The second feature is equally arresting and suggestive. There is no evening preparation, and by the whole of that amount the hours are shortened. There is no revision for examination, and the time spent over revision in other schools is saved. The examination at the end of each term is as searching as one could wish, but what is read once and then narrated is known, and no revision is required.

In the elementary schools interest, attention, concentration are as easily obtained; there is the same power, the same mastery. The writer could produce many exercise books and examination papers in literature, history, and geography which, for their facility of expression, their range of vocabulary, and their wealth of ideas, would bear comparison with similar books and papers in any secondary school.—I am, yours truly,

H. W. HOUSEHOLD, Secretary.

County Education Office, Shire Hall, Gloucester.

TEXT-BOOKS FOR TEACHERS.

PUBLISHED AT THE

University Tutorial Press.

Teaching, Principles and Methods of. By JAMES WELTON, D.Litt., M.A., late Professor of Education in the University of Leeds. *Second Edition, Revised and Enlarged.* 8s. 6d.

"A well-written and full presentation of the best educational methods of the time, not only to College Student, but to skilled and experienced practitioner, we commend this suggestive and very helpful volume."—*Schoolmaster*.

"A valuable and thoughtful book."—*Speaker*.

Moral Training, Principles and Methods of, with Special Reference to School Discipline. By JAMES WELTON, D.Litt., M.A., and F. G. BLANDFORD, M.A., Lecturer in Education in the Cambridge University Training College. 5s.

"A succinct and well-reasoned exposition, both theoretical and practical, of the ethics of school discipline."—*Scotsman*.

"Will be found invaluable to all who are interested in the important work of laying the foundation of good and noble lives."—*Educational News*.

Experimental Psychology, An Introduction to, in Relation to Education. By C. W. VALENTINE, D.Phil., M.A., Professor of Education in the University of Birmingham. 4s.

An Introductory Course in Experimental Psychology as applied to Education, for the use of Teachers, Students in Training Colleges, and Private Students.

"We shall be able to refer teachers to Prof. Valentine's book with perfect confidence that they will get just what they desire, and, still better, what they need. The book is worked on an exceedingly practical plan."—*Educational Times*.

Psychology, The Fundamentals of. A brief account of the Nature and Development of Mental Processes for Teachers. By BENJAMIN DUMVILLE, M.A., F.C.P. 6s. 6d.

"A very plain understandable outline of modern Psychology. It is well written in that crisp, vigorous model with which the author has familiarised us."—*London Teacher*.

"It is seldom that we have come across so self-contained a treatment of Psychology for teachers."—*The Journal of Education*.

Child Mind. An Introduction to Psychology for Teachers. By BENJAMIN DUMVILLE, M.A., F.C.P. 4s.

"It contains a very clear statement of the nature and development of child mind as at present understood."—*Educational News*.

"It gives in a simple and interesting manner the fundamentals of psychology, and a general sketch of the stages of child development."—*Journal of Assistant Masters Association*.

Hygiene for Teachers, Textbook of. By R. A. LYSER, M.D., Ch.B., B.Sc. (Lond.), D.P.H., B.Sc. (Public Health), Medical Officer of Health for Hampshire, and Chief Medical Officer to the Education Committee. 6s. 6d.

Meets all the requirements of the Board of Education Syllabus for Teachers in Training, and for the Teachers' Certificate, Section M.

"It is a thoroughly practical work, sound, and lucid."—*Educational Times*.

School Hygiene. By R. A. LYSER, M.D., Ch.B., B.Sc., D.P.H. *Second Edition.* 5s.

"The best book of its kind."—*British Medical Journal*.

Teaching: Its Nature and Varieties. By BENJAMIN DUMVILLE, M.A., F.C.P., late Master of Method and Lecturer on Education in the Islington Day Training College. 6s. 6d.

"Very helpful and suggestive. . . . It is a distinctly hopeful sign for the future of Education that books such as this, which insist on the importance of a scientific system, are now frequently making their appearance."—*Bookseller*.

For other announcements of the University Tutorial Press, see pp. 522, 551.

Complete Educational Catalogue, and Catalogue of Text-Books on Education and Philosophy for Students in Training Colleges, &c., post free on application.

Physical Education and Hygiene, Principles and Methods of. By W. P. WELPTON, B.Sc., Master of Method in the University of Leeds. With a Sketch of the History of Physical Education by JAMES WELTON, D.Litt., M.A. 6s. 6d.

"A comprehensive and well-balanced treatise on this important subject."—*Oxford Magazine*.

"A comprehensive scientific text-book."—*The Times*.

History of Elementary Education in England and Wales from 1800 to the present day. By CHARLES BIRCHENOUGH, M.A., Lecturer in Education and Master of Method at Sheffield University. 6s. 6d.

"A concise and accurate account of the evolution of the system of elementary schooling in England and Wales as we know it to-day."—*Publisher's Circular*.

History of Higher Education in England and Wales from 1800. By CHARLES BIRCHENOUGH, M.A. [In preparation.]

Education in England in the Middle Ages. By A. W. PARRY, M.A., D.Sc., Principal of the Training College, Carmarthen. 7s. 6d.

This is the publication of the Thesis prepared by Dr. Parry for his London Degree of D.Sc.

Nature Study, The Aims and Methods of. A Guide to Teachers. By JOHN RENNIE, D.Sc., F.R.S.E., Lecturer in Natural History in the University of Aberdeen. With an Introduction by Professor J. ARTHUR THOMSON. 5s.

"A methodical and well-arranged guide which teachers will find useful and suggestive."—*The Journal of Education*.

"It is just the book for the teacher who wishes to make his teaching really objective and practical."—*Schoolmaster*.

School Lessons in Plant and Animal Life. By JOHN RENNIE, D.Sc., F.R.S.E. 6s. 6d.

A course of 80 lessons in Nature Study, with full guidance to the Teacher as to how to learn and how to teach the subject.

"Teachers will find the book an admirable help in every respect."—*School World*.

School Gardening, with a Guide to Horticulture.

By ALBERT HOSKING, Lecturer in Horticulture and Chief Supervisor of School Gardens, West of Scotland Agricultural College. With numerous Illustrations and Plans. 4s.

Gives sound guidance in the correct methods of teaching the subject and of organizing the classes.

"On the subject of School Gardens the author can speak with a full experience, and his practical details throughout are thoroughly to the point."—*Nature*.

School Organization. By S. E. BRAY, M.A., Inspector of Schools to the London County Council. With an Introduction on "The Place of the Elementary School in a National System of Education," by Sir JAMES YOXALL. 4s. 6d.

"We can heartily recommend the treatise."—*The Journal of Education*.

Educational Handwork or Manual Training. By A. H. JENKINS, First Class Diploma in Manual Training of City and Guilds of London Institute, &c. 4s.

"Bears evidence of a thorough grasp of school requirements."—*Manual Training*.

HIGH STREET, NEW OXFORD STREET, LONDON, W.C.2.

TEACHING CAPACITY VERSUS ACADEMIC QUALIFICATIONS.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—“What I want is facts. Teach these girls and boys nothing else but facts. Facts alone are wanted in life. Plant nothing else and root out everything else. You can only form the minds of reasoning animals on facts. Nothing else will ever be of any service to them. Facts! facts!! facts!!!” Such was the principle on which Mr. Gradgrind brought up his children. Such, happily for the rising generation, is not the educational system of to-day. Education, one hears on all sides, must deal not only with a child's mental development, it must pay equal attention to the other sides of his complex nature—the physical, the moral, and the spiritual; it must strengthen the character, it must train the will, it must restrain the passions. It must produce not only a keen student, but also a capable citizen; not only a clever, but also a good man. And yet, when it comes to the question of the teacher to whom this most difficult of tasks is assigned, his intellectual attainments—nay, rather, one side of his intellectual attainments alone carry any weight with educational bodies—the power to pass at the age of twenty-two or twenty-three a fairly stiff, but sometimes quite youthful, written examination in one special subject. Armed with a slip of paper which records a good class in Honours, he can rise easily and automatically to almost any height in the teaching profession. Handicapped by a slip of paper which records an inferior class or a mere pass, he, despite the possession of those qualities which we prize so much in our children, is, like the Gibeonites of old, doomed throughout the whole of his teaching career to be for ever “a hewer of wood and a drawer of water,” and to find all paths to promotion barred to him. One seems to hear Mr. Gradgrind's words with a difference. “What we want is Honours. Honours alone are wanted in schools. Plant nothing else, and root out everything else. You can train the minds of reasoning animals only if you have Honours; nothing else will ever be of any service to them. Honours! Honours!! Honours!!!”

If Honour candidates prove to be enthusiastic and capable teachers—if they have character as well as brains, and energy as well as degrees—by all means let them rise, and that quickly, to occupy the highest places in the teaching profession. But, let their teaching capacity be tested first. Do not cast the pearls of the profession at the feet of youngsters almost straight from college, brilliant as their paper qualifications may be. Give them time to win their spurs as teachers as well as students, and let them—for the moment, at any rate—yield the field to maturer minds who unite tried service with high scholarship. One must not overlook the fact that in one and the same person may be found the clever writer and the dull speaker, the strong intellect and the weak character, and that no amount of scholarship will avail with boys and girls if one has a halting delivery, an unsympathetic temper, or an incapacity to realize what is going on in the back row.

And as for “the hewers of wood and the drawers of water,” what treatment should be meted out to them? Now that good honours degrees are within the range of the many, they will, as a class, tend to diminish appreciably, though, owing to the mechanism of some human brains and the needs of most secondary schools, they will, in all probability, never cease to exist. In all justice, one does feel very strongly that their initial remuneration should be considerably smaller, and their period of probation considerably longer and more searching, than that of their more highly qualified colleagues, so that, if they prove mediocre or incapable as teachers, they may be gently but firmly urged to take their mediocrity and their incapacity elsewhere. But one does feel just as strongly, especially in this transition period, that if, after due trial, they prove themselves to be keen students and capable and enthusiastic teachers, it is unjust and absurd that that slip of paper should hamper them throughout the whole of their thirty years or so of service. Their comparative failure at twenty-three may have been due to poverty, to ill health at the time of the examination, to the different ideals of their age, to the fact that no degree was granted in their subject, to the whim or mood of some examiner. Their brain power may be as good as, or better than, that of their colleagues, though possibly of a different calibre, and they may have read as widely and as deeply for pleasure as the others for examinations.

Even pass men may possess qualities which quite compensate for their lack of specialized knowledge—at any rate, in the middle and lower part of the school: the love of children, the power of sympathy, the gift of organization, the strength of will and character which alone can draw forth the best in others. Far and away the most inspiring teacher the present writer ever met was a woman who worked almost side by side with her pupils; far and away the least inspiring staff was one composed entirely of Honours men who, like

the fossils on the beach, had died, as far as their work was concerned, because they were too expert to change.

One wonders why educational authorities and charity organization societies alone probe so deeply into a man's early history. The most mediocre of pass degrees is no bar to a clergyman's becoming a bishop; a doctor usually specializes after, and not before, he takes his degree; a barrister may pass the most brilliant of written tests, and yet never be called to the Bar. If we want a lawyer, we look out for a man who can advise; if we want a barrister, we look out for a man who can plead; if we want a doctor, we look out for a man who can cure; then, why in the world, if we want a teacher, do we not look out for a man who can teach, and give him an equal chance to rise with the rest? And yet many educational authorities are so prejudiced that they can actually see no merit apart from Honours; and even those who are enlightened enough to appreciate capacity wherever it exists, nevertheless often help to illustrate, in a somewhat one-sided manner, the truism that virtue is its own reward, by giving the work and the responsibility to the one for his ability and the position and the remuneration to the other for his degree.

Britain has been renowned throughout the ages for the encouragement she gives to individuality and to individual enterprise. May her educational authorities never become so hidebound by convention and system that, recognizing only past achievement, they fail to obtain that present effort which alone gives life to work.

A. E. LLOYD.

INTRODUCTION TO WORLD HISTORY.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Your reviewer has misread my “Introduction to World History” if he supposes that I was under the impression that “Cardinal Newman was a notable of the Middle Ages.” What I did was to recall that in Newman's “University Sketches” there is a lively picture of Ireland in the early Middle Ages, and suggest that the essay should be read by students of the period. Manifestly, Cardinal Newman was included in the table because he wrote about the Middle Ages, not because he lived in them.

Nor did I “recommend students to surrender themselves to James Anthony Froude” as your reviewer suggests. Here is the passage: “If you take from your shelf the first volume of the ‘Short Studies,’ surrender yourself to the wizard who penned the ‘Times of Erasmus’ and the ‘Dissolution of the Monasteries.’ See with his eyes for a few hours. You can rely upon finding some other writer in the not distant future to temper the impressions formed by Froude, even if your own judgment has not instinctively done so. In any case you will be the better for communion with a richly endowed spirit whose passion for the past was as splendid as the words in which he enshrined it.”

If a young student does not read Froude in this spirit, surely he had better not read him at all.

Your reviewer is right. Professor Bury's name is John and not James.—Yours faithfully,

ERNEST H. SHORT.

52 Stanford Road, Kensington Court, W. 8.

[Mr. Short accuses me first of having “misread” his statement respecting Cardinal Newman. I find on reference to the “Introduction to World History,” page 149, that I have *not* misread it. Mr. Short, speaking of the Middle Ages, expressly says: “Here are the outstanding events in their due order, together with the personalities, cleric and lay, who brought them about,” and then he gives a table the first five names of which are Constantine, Augustine, Gregory the Great, Cardinal Newman, and Charlemagne. Every name in the whole table, with the sole exception of Newman's, is medieval. There is nothing whatever to indicate that Newman does not fall chronologically between Gregory and Charles (i.e. A.D. 600–800), or to suggest that he is included simply because “he wrote about the Middle Ages.” If he was included on this ground, why does he stand alone? Was he the only notable writer concerning the period? I accept Mr. Short's assurance that he himself knows that Newman was not a medieval man; but if so, he cannot be acquitted of culpable carelessness, as author of a book intended for beginners, in placing Newman without note or comment in his catalogue of “personalities who brought about” events in that remote age.

Secondly, Mr. Short says that he did not recommend students to “surrender themselves” to Froude. His own quotation shows that that is precisely what he *did* recommend them to do. Moreover, he does not indicate what other writers they should read to temper the erroneous impressions made by Froude; nor does he give reasons why they should “rely upon finding” such writers.

Finally, Mr. Short admits that Professor Bury's name is John and not James. But he calls him “Sir James Bury.” Will he

pursue his investigations further and find out whether or not he has been knighted?—YOUR REVIEWER.]

AN EXPLANATION.

To the Editors of the *Journal of Education and School World*.

SIRS,—As you end your kindly review in your June issue (page 411) of my book, "Psychoanalysis," with a definite question, perhaps you will allow me to answer it. You ask: "Why does Miss Low omit from her bibliography Dr. Nicoll's valuable book on Dream Psychology?" The answer is because my small bibliography consists only of books by writers who write from the Freudian standpoint, and Dr. Nicoll is a follower of Jung's work. You will note I have not included Dr. Jung's own work, for this reason, and no other.

One more point, if you have space for it. I see I have made myself misunderstood in my remark about the term "analytical psychology." I did not mean the name itself was new—as you properly point out, Stout has made the title known to us all—I meant that Dr. Jung had departed from the terminology "psychoanalysis" and renamed his body of thought and practice; therefore, his usage of "analytical psychology" was new.—Yours,
BARBARA LOW.

A SCHOOL LABORATORY LIBRARY.

To the Editors of the *Journal of Education and School World*.

DEAR SIRS,— "Science Master," in your June issue, raises the question of suitable books for a school laboratory library. May I, as a schoolboy typical of those who will use his library, suggest the following, all of which have been read with interest and appreciation by myself and my school friends?—

"Chemical Discovery in the Twentieth Century." By Sir W. Tilden. (12s. 6d. net. Routledge.)

"Contemporary Chemistry." By Dr. E. E. Fournier d'Albe. (4s. net. Constable.)

"Laboratory Arts." By G. H. Woollatt. (4s. 6d. net. Longmans.)

"Heroes of Science: Chemists." By M. M. P. Muir. (2s. net, S.P.C.K.) (Out of print.)

"The Student's Guide." By Prof. J. Adams. (5s. net. University of London Press.)

PREFECT.

LIVING IN PARIS.

To the Editors of the *Journal of Education and School World*.

SIRS,—May I call the attention of modern language teachers to the fact that, in spite of contrary rumours, it is now possible for them to spend the long vacation in Paris very inexpensively? I have been here for the past year, and have found that one can live comfortably and pleasantly on a very small amount.

A scheme for supplying the needs of teachers in this respect has been discussed with Prof. Ripman, and, with his kind advice, a definite plan has been worked out which will enable teachers to take the places of French students "gone down," and enjoy the privileges of their life in the Latin quarter, where rooms are to be had from 130 fr. a month, and an appetizing meal costs from 2.50 fr. to 5 fr.

Excellent courses for teachers are provided at the International Guild and the Alliance française.

I shall be pleased to supply any further information.

A. D'E. BANNISTER.

53 Boulevard St. Martin, Paris.

PRIMARY SCHOOL NOTES.

The Report of the Board and the Act of 1918.

THE Annual Report of the Board of Education gives little indication that the Act of 1918 is to be endowed with any substantial measure of reality in the immediate future. The number of teachers working in the schools shows a decrease of 1,886 upon that of the preceding year. The total of men certificated teachers last year was 35,606; that of women, 78,484. In each case there is a decrease upon the numbers of the preceding year. It is possible that the deficiency is due in part to the retirement of teachers from service who had remained in the schools beyond the ordinary age of retirement during the period of the war; and no doubt there would be some loss of married women teachers who resumed

Geometrical Drawing and its Practical Application.

By **A. E. HOLBROW, A.R.I.B.A.**

(Lecturer at the Regent Street Polytechnic).

2s.

This textbook has been produced to meet the latest requirements in teaching the subject. Every effort has been made to utilize the equipment necessary, the subject drawn, and the observations made and recorded, for the benefit of co-ordinated subjects, also to apply the work to everyday use and practical necessities. The sections dealing with the projection of solid objects are intended to lead up to the preparation of the necessary drawing for the use of the workshop, and, at the same time, prepare the mind of the student to enable him to visualize practical problems of everyday life.

The Publishers will be glad to receive applications for full particulars of the above book. Please write for a copy of their complete descriptive list of publications.

school duty temporarily until the close of the war. An exceptional feature is the increase of 288 in the number of men uncertificated teachers. These would probably consist of Service men who had no opportunity of studying for the Certificate Examination during the war period. The decrease in the number of men teachers since 1913-14 is 2,394. Excluding handicraft and cookery teachers, for which full statistics are not available, the number of teachers in the schools in 1913-14 was 163,507; in 1918-19 the number was 163,724—an increase of 217. For practical purposes, therefore, the net result of the national enthusiasm for educational reform, as translated into action by the joint efforts of the Board of Education and the local education authorities, is measured by an additional force of 217 teachers. It appears to be clear that the immediate prospects of the Education Act are largely dependent upon the capacity of existing teachers to undertake a graver degree of professional strain. On the other hand, the position is not so hopeless as it appears, owing to the fact that there has been a steady decrease since 1913-14 in the number of pupils in attendance; and, as a result, the average number of pupils per teacher has fallen from 37 in 1913-14 to 35 in 1918-19. The corner-stone of the 1918 Act is constituted by the raising of the school-leaving age to fourteen years; but, since the appointed day is dependent upon the Order in Council in determining the official end of the war, the educational future of young England cannot be assured until this date is fixed.

Teachers and the Labour Party.

LARGELY as a result of the economic position, there is a notable inclination among teachers, individually and collectively, to reconsider the question of joining forces with the Labour Party. It is unfortunate that the serious uplift in prices should so largely have discounted the efforts of the Burnham Committee that, notwithstanding moderate advances in salary, many teachers find themselves nearer the poverty line than ever. At the same time, the professional scale of salaries drawn up by the National Union of Teachers, after full deliberation, has been ignored by education authorities generally. The recent victories of the Labour Party at the local council elections have brought many members of the working classes in intimate relationship with the administrative side of education, particularly with the schools and the teachers. Labour members of education committees have openly expressed contempt

at the paltry salaries received by teachers. In effect they say: "What is your Union doing to allow you to work for salaries less than those of the Union scale?" And teachers are urged to affiliate with the local trades and labour councils, which will demand and secure for teachers, as a matter of course, the scale of the National Union of Teachers. Leaders of experience among teachers are all aware of the rising volume of discontent, and they have little doubt that the teaching profession is nearer to a *rapprochement* with the Labour movement than it has ever been before.

The N.U.T. and the Trade Union Congress.

AFTER a full discussion on a resolution that the Executive of the National Union of Teachers should recommend the next Conference to affiliate with the Trade Union Congress, an amendment was carried by the Executive that a special committee should be appointed to make inquiries, and report to the Executive as to what the precise effect of such affiliation would involve. The statement has been made that affiliation would not imply any sacrifice of individual political independence, and the inquiry will be useful in making this point clear.

The Lack of Initiative in Inspectors and Teachers.

No one who has had any considerable experience of schools and teaching will deny that Mr. Edmond Holmes gives in his new book, "In Quest of an Ideal," the potent cause of that lack of initiative which is still a reproach to all who are concerned with the organization and administration of English education. The intolerable narrowness of outlook fostered by the system of payment by results still trails its soul-killing influence upon inspectors, teachers, and pupils, owing to the fact that the old régime still survives in the schools and among the inspectorate. The monotonous uniformity of syllabus, the multitudinous formalities which must be observed with every departure from the ordinary routine of school, the growing demands of the authorities for merely clerical returns from teachers, the inveterate habit of petty criticism and lack of outlook which distinguishes so many of the minor officials who come in personal relationship with teachers—all have the cumulative effect of forcing teachers and inspectors into the narrow and deepening groove of a life governed strictly by precedent.

A Junior Inorganic Chemistry.

By **R. H. SPEAR, B.A. (Oxon.),**

Senior Chemistry Master, Swansea Grammar School.

The course of Chemistry presented in the present volume is suitable for students who, having passed through some preliminary work in Elementary Science such as is usually taken in the first and second forms of a school, are entering on the study of the Science of Chemistry proper. The course is intended to cover the work of the first three or four years. It meets the demands of the middle school, and covers the syllabus of the London Matriculation, the Senior Central Welsh Board, and similar examinations.

BY THE SAME AUTHOR.

ELEMENTARY.

N.B.—The prices are Net.

ADVANCED.

FIRST FRENCH BOOK for children. Third Edition. On modern lines, with conversations, music, and illustrations. Phonetic transcript. Large print. Demy 8vo, 235 pages. Price **3s. 9d.** cloth. **3s.** half-cloth boards.

DRILL ON THE ESSENTIALS OF FRENCH ACCIDENCE AND SYNTAX. New (8th) Edition, with many additional English Exercises. A complete Elementary Grammar containing the conjugations and "drill" chiefly in French sentences, upon the important points, and rules, a short summary of which is given. Most handy for correspondence classes. Crown 8vo, 160 pages. Price **2s. 6d.**

FRENCH VOCABULARIES for Repetition. Fourth Edition. Containing the 3,000 most important Words and Phrases logically grouped in tens and divided into two categories (elementary and advanced), with the most useful DERIVATIONS, preceded by a **SHORT NOTE ON PRONUNCIATION**, and followed by an **APPENDIX** on the different PREPOSITIONS required by French Verbs. Crown 8vo. Price **2s. 6d.** **PHONETIC (m.f.) TRANSCRIPT** of same, **8d.** Both bound together, **3s.**

JUNIOR FRENCH RECITER. Fourth Edition. Extracts in Prose and Poetry from Classical Authors with **PHONETIC TRANSCRIPT (m.f.)** facing the text, with Notes, Questions on Grammar, and Outlines of Conversations and of free Written Exercises. Crown 8vo, 89 pages. Half-cloth, **1s. 8d.**

SECOND FRENCH BOOK, on the same lines as the First French Book. Second Edition. Demy 8vo, 211 pages. Price **3s. 9d.** cloth; **3s.** boards.

MAP OF PARIS, with monuments in elevation, useful for practice in conversation. Price **6d.**

PRACTICAL FRENCH GRAMMAR. Fifth Edition. For Schools and Colleges. "A really practical and sensible Grammar, complete in its incompleteness." Crown 8vo, 194 pages. Price **3s.**

SENIOR FRENCH RECITER, on the same lines as the Junior. Second Edition. Extracts from the Classical Authors of the Golden Age with **Phonetic (m.f.) Transcript.** Crown 8vo, 91 pages. Half-cloth, price **1s. 8d.**

GRADUATED COURSE OF TRANSLATION INTO FRENCH PROSE for Middle and Higher Forms of Schools and for University Colleges. Sixth Edition, with Appendix. 158 Extracts of convenient length, with carefully worked-out Correct Versions. Demy 8vo. Price **3s.—Key, 5s. 3d.** in book—**4s. 6d.** printed on loose sheets ready for mounting, to teachers of recognized positions or to students who send a written authorization from their teacher, on application, with remittance, to the author, c/o Mr. TAMBLYN, 116 Ladbroke Grove, London, W.10.—**Phonetic Transcripts** of Extracts 1 to 83, mostly at **1d.** each: apply to author.

SHORT FRENCH HISTORICAL GRAMMAR AND ETYMOLOGICAL LEXICON (2,500 words). For Schools and University Colleges. Crown 8vo, 265 pages. Price **6s.**

GERMAN VOCABULARIES, on the same lines as the French Vocabulary. Crown 8vo, 102 pages. Half-cloth, price **2s.**

FRENCH-ENGLISH AND ENG.-FRENCH DICTIONARY. By Dr. A. SPIERS, with supplement by Prof. VICTOR SPIERS. Literary, Commercial, and Technical. 2 vols., royal 8vo., **25s.** the set.

SPECIMEN COPIES at less than cost price to Teachers.

PSYCHOLOGY AND THE TEACHER.

By Dr. P. B. BALLARD.

TWENTY years ago Hugo Münsterberg published a book in which he maintained that psychology was of little use to teachers. The same year, William James, in his "Talks to Teachers," put forward a view which was not much more encouraging. A little later there appeared in this journal an article by Mr. Rayment, which urged us to recognize education as a science distinct and separate from psychology, on the ground that it had its own problems to solve and its own way of solving them, while the psychological principles that seemed to be applied to teaching were mainly those which psychologists themselves had long ago discarded as untenable. And these gloomy views were quite justified. Psychology in those days had very little to tell us as teachers, and what little it had was misapplied. The abuse of psychological terminology was scandalous; any sort of teaching of any sort of subject-matter was defended on the score that it cultivated "the memory," "the imagination," "the reasoning powers," or, indeed, any other "faculty" which was supposed to be cultivable *en bloc*.

The only reputable books on the subject in those days were Sully's "Teacher's Handbook of Psychology," and Lloyd Morgan's "Psychology for Teachers," and it must be admitted that they helped the teachers to teach about as much as a study of textbook botany helps a man to cultivate his garden, or a microscopic examination of muscular tissue helps him to keep himself well. The psychology was quite good of its kind, but the difficulty was to apply it. It is therefore not to be wondered at that many teachers of sound practical sense, accustomed to think out things for themselves, acquired a secret contempt for psychology, a contempt which still seems to persist in most schools for higher education. The teacher of the very young, refusing to accept so pessimistic a creed, took refuge in child-study. She felt that

here at least she could find facts and principles which would rescue her calling from bald empiricism. In doing this she was studying psychology without knowing it—or, at least, without naming it. In the public and secondary schools, however, the prevailing opinion is frequently that expressed by Ian Hay in "The Lighter Side of School Life." He says there, if I remember rightly, that the whole secret of teaching is to keep order in your class. If you can do this, you can do anything; if you cannot, you had better give up teaching. A study of psychology is, therefore, superfluous.

Opinions, however, which could reasonably be held twenty years ago, can no longer be held without incurring the reproach of wilful blindness. The position has changed so completely since the beginning of the century that the teacher who knows nothing of modern psychological theory is as hopelessly out of date as the physician who knows nothing of bacteriology. The dawn of the century was, in fact, the dawn of a new educational era; it was a date round which many significant events cluster. In 1897 Prof. Adams gave the world that delightful little book on Herbartian Psychology which struck a new note in educational literature, and was a joyous challenge to traditional psychology and traditional education. In 1900 Mr. Winch published his "Problems of Education," a difficult book to read, but one which sounded the same note of challenge, and pointed to the way of experiment which has since been so fruitfully followed by himself and others. Thorndike began publishing his experimental work in America, and Meumann in Germany; and when Alfred Binet issued his intelligence tests, in 1905, he set loose a flood of research and discussion which has gone on swelling to this day. No less significant was the publication in 1900 of Freud's "Interpretation of Dreams," the beginning of psychoanalysis and the modern theory of the unconscious. The barriers between psychology and education began to break down; psychology began to learn from education no less than education from psychology. The researches undertaken in schools to elucidate the problem of formal training has profoundly changed the psychological analysis of mental functions. Chapters on mental tests find a place equally in books on psychology and books on education. These are but two examples out of many.

One result of this change of outlook has been the relegation of Sully and Lloyd Morgan to the top bookshelf. They themselves saw this, and both drastically revised their books in 1909. But, laudable as the intention was, it merely meant the patching of worn-out garments, and the modern teacher would be well advised to clothe his ignorance from other sources. Sully's real contribution to educational doctrine is to be found in his "Studies in Childhood," and, as for Lloyd Morgan, he has more original things to say about animals than about children.

Professional opinion—the part of it that counts, at any rate—is now wholeheartedly on the side of psychology. It is true that the Board of Education seems to taboo the subject; what it really does taboo is the name. For, although the word "psychology" does not, so far as I can discover, appear either in the Suggestions to Teachers or in the Syllabus of Examination for the certificate, both documents are full of camouflaged psychology. In marked contrast to this psycholophobia we find that at the Teachers College, Columbia University—probably the largest and best organized training college in the world—psychology holds the place of honour. By a scheme of "electives" a student may omit any subject he likes except psychology. Psychology is the one and only obligatory subject; and this is a college attended by nearly all Americans who aspire to the higher posts of the teaching profession, such as that of superintendent or of supervisor. Indeed, it is safe to say that in no civilized country in the world is psychology held in such low repute as it is in England. This seems to arise from the circumstance that England is not yet awake to the fact that the psychology of to-day is very different from that of the nineteenth century. But there are signs of awakening. The head teachers of secondary schools who have to select for scholarships children from the elementary schools realize the importance of getting the ablest

children, and not the best passers of examinations; and they are beginning to find that the modern system of mental testing facilitates their choice. They can no longer afford to regard child study as a subject only suitable for the minder of babies—they realize that adolescence has its interests and enthusiasms, its stresses and its strains, scarcely less alien to the mature mind than the whims and vagaries of infancy.

This being so, it were well to consider what store of psychological knowledge a teacher in a secondary school might profitably acquire. In the first place, he should have a fair acquaintance with general psychology—should know, that is, its scope, its basal facts, and its established principles. It is not necessary for him to read all of the large standard books on the subject. If he has a mind to do so, he will find William James's "Principles of Psychology" far and away the most readable. Although it contains much material that is of merely academic interest, and some that recent research has discredited, the book is a classic—it is literature as well as psychology.

For practical purposes, however, the teacher will find all he needs in McDougall's little book on psychology in the "Home University Library." If he has been to one of the older universities, he will probably have found these two distinct schools of psychology—the one clinging to the older, introspective psychology, with its leaning towards metaphysics; the other, pinning its faith to experiments in the psychological laboratory. The two parties disagree on the question of values. Things which one party thinks of supreme importance the other party regards as negligible. On their points of difference they are silent in public, but garrulous in private. Each school has its little peculiarities. One will argue for hours on the distinction between a feeling of unpleasantness and the unpleasantness of a feeling, and the other will spend laborious days in mapping out the temperature spots on a given area of skin. These pursuits the teacher must regard as luxuries. They certainly will not help him to teach. He will find none of these superfluities in Dr. McDougall's book. This should be supplemented by Bernard Hart's "Psychology of Insanity" ("The Cambridge Manuals of Science and Literature"), a fascinating little book which has the merit of presenting psychology as a study of human nature, and not a mere study of the mind (the mind means to most people the intellect only), and of really helping a man to understand himself and to understand others. It has the further merit of introducing the reader to psychoanalysis. Indeed, it is the best introduction he could get. The reader should not be misled by the title—it is a misnomer. It really deals with the psychology of sanity, as illuminated by the study of the insane.

If the teacher cannot go through a course of experiments in a psychological laboratory, he should certainly get to know something of the experimental methods there adopted. For the application of these methods—of the same care, precaution, and mathematical precision—in the field of education has led to highly important results. Some understanding of these methods may be gained from Dr. Myers's small book on Experimental Psychology (Cambridge Manuals).

Above all, the teacher should acquaint himself with what has been done in recent years in the way of educational experiments—the form of applied psychology which most closely concerns him. I do not refer to that kind of experiment that goes on in pioneer schools, where the methods are merely novel and the conditions uncontrolled, but rather to those experiments which have been carried out on strict scientific lines and whose aim is demonstration, not persuasion. Some of Thorndike's books afford good examples. The English teacher, however, cannot do better than read Dr. Rusk's "Experimental Education." This will give him the gist of the matter, and will serve as a guide to further reading.

Then there is the large province of mental tests and statistical methods, touched upon but not adequately dealt with, by both Myers and Rusk. The standard book on the subject is Whipple's "Mental and Physical Tests." But this book is large, expensive, and American. Messrs. Hodder & Stoughton have just issued a book of mine on "Mental Tests" which is meant to meet the needs of English teachers. It con-

tains, among other things, Mr. Cyril Burt's translation and revision of Binet's Tests.

Finally, a word must be said about psychoanalysis—the point at which psychological theory is most rapidly growing. For this very reason—just because psychology is here in the making—one cannot speak with confidence about its bearing on education. That it has a bearing—a very important bearing—there can be no doubt; but conclusions drawn at present are necessarily precarious, and most teachers would probably be wise to “wait and see.” There are already in this realm two schools of thought, and within each school many diverse opinions. There are two points at which the teacher should be on his guard. He should remember that many of the theories put forward are based on the study of the abnormal; and he should accept with caution such books (they need not be named) as purport to apply to education the doctrine of the unconscious. These books are as a rule wild, unbalanced, and sex-obsessed. If Bernard Hart's book is regarded as insufficient, I can recommend “Psychoanalysis” by Miss M. K. Bradby (Oxford Medical Publications). It is not free from inconsistencies, but is on the whole a sane and clear treatment of the subject and has many original features.

The advice I have offered has been given at the invitation of the Editors. The reader will therefore, I trust, pardon its pontifical tone. It is really offered in a spirit of service with a due awareness of my own “complexes.” I assume that the reader, like myself, has no great love for the ponderous and the vague. I have chosen my books accordingly. This reminds me that I must mention one more book. It is at least half a century old, and has probably been read by others, as it has been read by me, over and over again. I refer to D'Arcy Thompson's “Day Dreams of a Schoolmaster,” a book which, in spite of its narrow scope, contains more of the modern spirit than all the psychologies for teachers rolled into one.

LIBRARIES AND EDUCATION.

By EDWARD GREEN,
Chief Librarian, Halifax Public Library.

POSSIBLY the chief need now, so far as the industrial worker is concerned, is an education wide and all-embracing, not necessarily designed to help him to make more money, but rather to give him greater knowledge of, and interest in, those things that alone make life worth living. It is surely somewhat of a disappointment that hitherto popular education in this country has not done more to create a desire for things of the mind. Of course, the half-time system, and the early leaving age of full-timers, has thwarted, to some extent, the ambitions of the elementary-school master; besides which, the appalling neglect of books—apart from “readers” and textbooks—is another factor. With the raising of the age limit, however, there is surely hope for better work in this direction in the immediate future.

A greater recognition of the value of books and libraries, and their intelligent use, will undoubtedly do much for a wider culture, but the foundations of any success in this direction must be laid in the elementary school. That this is now recognized the recent valuable reports on adult education testify, and, in those places where experiment has been made, the results have exceeded the most sanguine expectations.

In the town of Halifax a co-operative policy between the education and library committees has, during the past fourteen years, been attended with most gratifying results. In 1906, a scheme of school libraries was instituted, and since then the twelve thousand specially selected books have been circulated upwards of a million and a-half times. The children using these libraries have, in fact, been taught not only how, but also what, to read on the most approved lines, and in many instances the parents also have read the books carried home by the children. But these juvenile libraries are but one phase of the joint scheme. Every child, before finishing his

or her school career, is given by the teacher an organized lesson on the arrangement and resources of the Chief Public Library, with the result that the pupil is eager and continues as a reader. From a recent count it was found that 80 per cent. of leaving pupils joined the adult libraries. The value of this can scarcely be over-estimated, because to introduce anyone to a well equipped library is to open up an avenue of interest and knowledge that is educative in the widest and best sense.

The present article, however, is concerned chiefly with a line of development dictated by practical experience. First and foremost, the writer believes that any and every school—large and small—should have attached to it, in the same building, a special room set apart and designed for a library. The work of this library should not be regarded as something subsidiary to the curriculum, but rather as a most important part of it. The room should be shelved in such a manner that no child reader has either to climb or go on its knees to reach any desired volume, and every borrower must have free access to the shelves during the hours set apart for the purpose. Suitable furniture, in the shape of tables, comfortable chairs, &c., must be provided, whilst, in the first instance, the library ought to be organized by someone trained in library work. The selection of books may most suitably be decided by a joint committee of teachers and a librarian.

Any scheme carried out on the lines suggested possesses many advantages over interchangeable collections, or boxes of books, which are not libraries in the sense that a permanent collection, suitably housed, classified, and arranged, is. In the one case, you may get books distributed more or less haphazard from classrooms, whilst in the other the library is a definite centre, affording wider choice, and, with all the other features, including the “library atmosphere” insisted upon in “The Report on Adult Education: Libraries and Museums.”

Whilst the chief work of a school library is, no doubt, to foster and guide home-reading, its potentialities are considerably wider. The reference side of the work is most important, and the ability to use intelligently books of reference should be consistently taught in every school. Many adults who have passed through the elementary school are quite unaware of the stores of information in reference libraries, a state of affairs that will not exist when libraries are sufficiently valued in the educational scheme.

UNIVERSITIES AND SCHOOLS.

BRISTOL.

The University has established a new examination for a higher commercial certificate, to be held annually in July at the same time as the School Certificate Examination. It is generally applicable to candidates from secondary schools at about the age of eighteen, but others are admitted without restriction either of age or place of study. The examination is held in compulsory subjects—arithmetic, geography, and contemporary foreign languages. Optional subjects are English, natural sciences, economics, foreign and colonial history, and book-keeping.

Bristol, in common with other universities, has now established a degree of M.A. in education, open to graduates who have already obtained a diploma in education. The degree will be awarded on a thesis presented by the candidate, a course of work in the University being required of candidates who are graduates of other universities. The Testamur in Education is a new departure. It is intended for students taking Board of Education third year courses. A change in the Diploma of Education is not without interest: the study of the history of education is no longer compulsory. An alternative is provided by a new paper on social and economic theory in its relation to education.

WALES.

His Majesty the King, during his visit to South Wales, laid the foundation stone of the new University College of Swansea in Singleton Park, the fine site which the Corporation has presented to the college authorities. The financial prospects of the new college are

improving, as several influential local firms have undertaken to subscribe sums varying from £500 to £1,000 a year for five years towards its current expenses, and there is no doubt that the patronage of His Majesty will tend to stimulate more of the industrial associations to guarantee substantial annual amounts. The science departments will be opened next session, and with this object in view the council of the college have made appointments to several professorships. Dr. C. A. Edwards (Manchester), professor of metallurgy in the University of Manchester and Dean of the Faculty of Science, has been appointed as professor of metallurgy. As it is the ambition of the new college to build up a metallurgical department of the first rank, both in research and in teaching, and also to establish a close relation between university education and metallurgical practice, the appointment to this post is of great importance. Lieut.-Col. A. R. Richardson, professor of aeronautical science in the Royal Air Force College, Cranwell, and lately assistant lecturer in mathematics under the University of London, is the new professor of mathematics. Dr. E. A. Evans, senior lecturer in physics in the University of Manchester, has been appointed professor of physics; and Dr. J. E. Coates, O.B.E., lecturer in physical chemistry in the University of Birmingham, as professor of chemistry. Dr. Arthur E. Freeman, assistant lecturer in geology at the University College, Cardiff, has been appointed to a lectureship in geology; and Mr. Ernest Hughes, lecturer in history at Cardiff, to a lectureship in history. But, until the arts department is properly organized, the work of the lecturers will be mainly extra-mural.

Secondary School Regulations. The Welsh Department of the Board of Education, in their new Regulations for Secondary Schools, draw serious attention to the premature withdrawal from school of a fairly large percentage of the pupils, and they issue a warning to local authorities that, unless steps are taken to minimize this evil, they will in the future make a reduction in the annual grant. It is pointed out that pupils who remain for a short period in the schools not only derive no benefit themselves, but, in the present congested state of the schools, they also prevent others, who would have remained for a full course, from entering the schools. That it is high time for some drastic action to be taken in this direction is generally recognized as, in the industrial areas especially, there is a great leakage at the end of the second and third years of the school course. It is, however, not so clear how the school authorities can effectively prevent this waste of public expenditure, but, any way, it is satisfactory to note that the Welsh Department are prepared to bring pressure to bear upon education committees, and therefore indirectly upon the parents.

Cardiganshire Education Scheme. This scheme, which has just been published, contains interesting and novel features. The director of education, in a preface to the scheme, directs attention to the guiding principle of the Education Act, 1918—namely, that there is a definite unity in all forms of educational provision. Primary schools should therefore be regarded not as distinct entities but as preparatory to other types of schools. He therefore suggests that there should be provided (1) preparatory schools for pupils up to eleven or twelve years of age, (2) secondary schools for pupils from about twelve up to sixteen or eighteen years of age, (3) and central schools for pupils who are unable to gain admission to the secondary schools. It is estimated that twenty-two central schools will be necessary and that continuation schools for about 2,800 children will be required. The latter type will be organized in close connexion with the central schools, and it is intended that pupils from the central schools will continue their education in the continuation schools. So far, this scheme is drawn up on orthodox lines, but it is proposed, in addition, that courses supplementary to those given in the schools shall be provided and that these shall include (1) junior full-time courses meant to prepare children leaving elementary schools for particular occupations, (2) senior full-time courses of the same character for children leaving secondary schools, and (3) senior part-time courses. As Cardiganshire is one of the smaller Welsh counties, and is essentially rural in character, it will be interesting to see how far it will be possible to give effect to these recommendations, excellent as they are in their conception, except in a few of the more thickly populated areas. In the scheme there are also sections devoted to the Welsh language, literature, and history, and to the physical well-being of the pupils, on which the director of education rightly places great stress. Agricultural education is also given much prominence.

Appointments. Dr. T. H. Parry-Williams has been appointed professor of Welsh at the University College, Aberystwyth. This post has been vacant since the death of the late Sir Edward Anwyl. Dr. Mortimer Wheeler has also been appointed keeper of the department of archaeology at the University College, Cardiff. Mr. Jenkyn James, the director

of education for Cardiganshire, is leaving for a similar post at Barnsley.

Federation of Teachers Associations. All the Welsh education associations, with the exception of the National Union of Teachers, have joined this new organization. Mr. R. D. Laurie (Aberystwyth College) is the chairman, Miss Collin (Cardiff High School) vice-chairman, Mr. A. E. L. Hudson (Pontypridd) treasurer, and Mr. S. R. Illingworth secretary.

Music. The Montgomeryshire Education Committee have resolved to appoint a director of music for the county who is intended to work in conjunction with Dr. Walford Davies and the National Council of Music. The new official will deliver lectures, organize classes in music, select and distribute a central library of musical works, and generally assist the schools in the cultivation of the teaching of music. He will also be expected to organize an annual musical festival for the county. The scheme, which is a novelty in Wales, is ambitious, but is worthy of every support, and it is to be hoped that the experiment will be so successful that other counties will be induced to follow in the wake of Montgomeryshire.

Central Welsh Board Examinations. These examinations commenced during the first week in July and were continued up to July 22. There is no doubt that such a prolonged period is a serious strain upon the candidates, and therefore it seems to be desirable that the time should be curtailed substantially. With the disappearance of the junior examination, it should not be impossible to limit the time to ten days or a fortnight. The papers set seem to be fair and satisfactory.

University Course. The annual collegiate meeting of the University Court was held at the University College, Bangor, on July 15. Among the recommendations of the Senate, the following is of interest to the schools—namely, that trigonometry be added to the syllabus in mathematics for the matriculation examination in 1921 and subsequent years. As this alteration affects the schools rather seriously it would have been useful to have had it discussed at the secondary-schools committee before submitting it to the University Court, for it appears that it is essentially the type of question on which the opinion of this committee would have been valuable. Another important recommendation of the Senate deals with the completion of the matriculation examination. It suggests that candidates who have passed the senior examination of the Central Welsh Board in all but one subject (mathematics excepted), and have subsequently passed the higher examination of the Board in two subjects with distinction, may matriculate without further examination.

At a congregation held in the afternoon honorary degrees were conferred on the following, among others:—Earl Haig, Miss E. P. Hughes, Alderman the Rev. D. H. Williams (chairman of the Central Welsh Board), Mr. Roger W. Jones (late head master of Pengam School), His Grace the Archbishop of Wales (Dr. A. G. Edwards), and the Rev. J. Morgan Jones (Cardiff).

SCOTLAND.

The Annual Report on Scottish Education. The Report of the Committee of Council on Education for 1919-20 is of more than usual interest. Critics of the Education Department and people who think that Government Departments always do things badly, will do well to study its pages with care. They will find in it a record of the most important national work in the organization of the schools, admirably done by Sir John Struthers and his colleagues. Even those who do not always see eye to eye with the Education Department must recognize that in the varied operations required to give effect to the Education Act of 1918—which provide the central interest of the present report—Scotland has been splendidly served.

Giving Effect to the Education Act. The Report gives a broad survey of the measures which have been taken to make the Act effective. These have found expression in a long series of minutes and circulars in the course of the year, and as comment has already been made on most of these at the time of their appearing, there is no need to do more than cull from the Report a few of the new facts provided on special points. It is interesting to note, for example, the great diversity of practice in regard to school management committees on the part of the education authorities. The policy adopted by them with regard to the division of their areas for this purpose has varied between two extremes which are exemplified in the cases of Argyllshire and Renfrewshire, the former county having forty-six school management committees (one more than the number of the old school boards), while the latter, with five times the population of Argyllshire, has only five committees. Nothing is said about the

difficulties which have occasionally arisen in regard to the scope of the committees' functions, except with reference to the claim of certain committees in county areas with a secondary school under their management to grant exemptions. The question, says the Report diplomatically, still awaits a satisfactory solution. The facts relating to the transfer of voluntary schools to education authorities also deserve attention. In all 292 schools have been transferred, of which 225 were Roman Catholic, forty-seven Episcopalian, three Presbyterian, and seventeen others, leaving only thirty-five voluntary schools still outside the national system.

The situation in the matter of school building, as the Report indicates, is most serious. The actual accomplishment in the provision of accommodation from 1914 to the end of 1919 was less than the output of one and a half normal years. In

order to make up these deficiencies within the next four years and at the same time keep abreast of the growth of population, it would be necessary to double the former annual supply of new buildings for the country as a whole. As yet there is no sign of anything being done to make good the shortage. The first four months of the present year, indeed, have but added to the previous accumulation of arrears. In these circumstances, say the Department, it is clearly out of the question to add to the undertakings of the authorities the far-reaching demands which would be involved in raising the school age by a year and initiating the new continuation classes. The only suggestion thrown out is that experiments should be made in the construction of schools less durable and less costly than the older type of buildings. So far as it goes, this is a good enough answer to those who have criticized the Department for accepting a considerable delay in putting Sections 14 and 15 of the Act into execution. It is true that the cost of building is outrageously high and the supply of labour small. But one cannot help wondering whether, if the urgency of the national need were properly realized, ways and means of overcoming the difficulties could not be found. If there are money and labour for the building of picture houses, why not for the building of schools?

It is unfortunate that the deficiency in school accommodation should coincide with a remarkable increase in the number of pupils seeking admittance into intermediate and secondary schools, mainly in working-class communities. In spite of the

fact that the number of these schools has remained stationary, the total enrolment has risen from 47,742 to 58,948 between 1913-14 and 1918-19. This is an increase of 23 per cent. as compared with less than 6½ per cent. in the five preceding years; and the increase would have been much greater if there had been school room for all the children who wanted to enter on a secondary course. Most of the large secondary schools have been compelled to institute entrance examinations to keep out pupils. From the point of view of standards of attainment this may not be altogether a bad thing if it does not last too long. But it would be a great pity if the desire of the better-to-do working classes for a liberal education for their children, which is largely responsible for this state of matters, should meet any serious obstacle at this stage. If the hour of opportunity is not to be missed, more secondary schools will have to be built, and soon. Meanwhile there are reports from different parts of the country of the proposed institution of new intermediate schools in connexion with primary schools to serve as feeders of the large secondary centres. This in itself is a movement in the right direction, but it only postpones the evil day. The difficulty will arise again once the scholars from these schools begin to present themselves for the post-intermediate courses.

The simplicity of the organization of secondary education in Scotland is illustrated by the recently issued Regulations as to Secondary Schools. In these

Regulations the older secondary schools and higher grade schools providing a five years' course of instruction are for the first time put on the same official footing. A secondary school is defined as "one providing at least a five years' course of suitable education leading to the successful presentation at the Leaving Certificate Examination of such proportion of the pupils as may seem to the Department to be reasonable." Further, the curriculum of studies must as a rule include English, history, geography, mathematics, at least one language other than English, science, and drawing, though in the later years one or more of these, always excepting English, may be omitted; and there must be opportunities for study of each of the four languages, Latin, Greek, French, and German, at the choice of the pupil. As schools of both types conform to these requirements, it may be presumed that the distinction between secondary schools and higher grade schools will disappear from the statistical statements of the Department at an early date.

The authorities are busy just now making up their budgets for the coming year, and, as may be judged from the reports of their meetings and from the comments of the Press, the business is not

pleasant either for the members of the authorities or for their constituents. The establishment of salary scales not less than the national minimum scales has sent the cost of education bounding up in most parts of the country. Except in Wigtownshire and Argyllshire, where there is to be a small reduction, all the authorities which have met so far have made an increase, generally large, on last year's rates. The increase is greatest in industrial areas like Glasgow and Lanark, where teachers' salaries are high. Sir Henry S. Keith, the chairman of the Lanarkshire authority, finds some consolation in the prospect of an increase in the Treasury grants in a year or two as educational expenditure in England grows, and, meanwhile, advocates the institution of a local income tax to remove the inequalities of the present rating system. Glasgow, with its eye on the present situation, proposes to challenge the ruling of the Department that expenditure incurred in raising its non-graduate teachers to the graduate standing, in accordance with the permission given in the foot-note to the National Scales, is not approved expenditure for purposes of grant. In the case of Glasgow £200,000 per annum is involved. Teachers all over the country will follow the course of the legal proceedings, to which this is almost certain to lead, with keenest interest. They have all along contended that the Department's interpretation of the foot-note, which has the effect of discouraging the equal treatment of teachers, is at fault, and their sympathies go with Glasgow.

IRELAND.

What has happened to the Irish Education Bill? Nobody seems

The Education Bill

to know. The House of Commons is a veritable sphinx for information, and questions there elicit no trustworthy news. The Premier says that it is the intention of the Government to go on with it as soon as possible. Dogmatic statements are made in certain Irish papers of accredited standing that it is dead, while important persons who should not speak without knowledge declare that the Bill is alive and that negotiations behind the scenes have resulted in an agreement which will ensure it an easy passage through Parliament. To the man in the street all this is very puzzling. Of only one thing is he certain, that no further progress will be made with it before the summer, and when he thinks of the autumn session he remembers the hopes he placed in a similar session last year, all of which have long since withered away. The friends of education who hope for a reform Bill will do well not to be sure of it until it is actually passed. It is possible—although nothing can be vouched for as true—that both those who declare the Bill dead and those who declare it alive are correct. The belief has become widely spread that the rock of offence in the Bill is to be removed and the objectionable Department of Education which was proposed is to be replaced by a Board of Education having some resemblance to the present National Board and Intermediate Board and consisting of an amalgamation of the two, and that the erstwhile opponents of the Bill will be reconciled by this compromise. If this be true, the present Bill would be allowed to die a natural death and a new Bill on similar lines would be introduced in its place. The whole situation is most unsatisfactory for the teachers, who are the immediate sufferers, and presumably the difficulties are not eased by the difficult political situation.

One ray of hope for the secondary-school teachers shone out early

An Interim Grant for Teachers.

in July, when the Chief Secretary told an Ulster Member of Parliament that it was proposed to make a grant for Irish education irrespective of the Bill. The amount was not stated, but would be placed on a supplementary estimate to be introduced into Parliament before the end of the month. It has been since declared that it will be between £60,000 and £70,000, the equivalent amount due to secondary education for the year ending June, not of this year but of last year. This being so, there would be later another and larger amount to be paid for the present year. Unfortunately this provision is rather late in the day and has been too indefinite to be satisfactory for schools whose year closed at the end of June, and which wanted to know before the vacation with some degree of accuracy what their financial prospects were for the coming session. Most of them, unable to face the future on the uncertain prospect of a nebulous grant, have decided on a more or less serious increase of fees after the summer.

Teachers' Salaries.

The Irish Secondary Teachers' Association—a Roman Catholic body—which engineered a successful strike for higher salaries last May, held its annual general meeting in Dublin at the beginning of the summer vacation, and laid down a new scale of minimum

salaries for the school year 1920-21, as follows:—For full-time registered teachers, men and women, £250 per annum non-resident and £185 resident; for full-time unregistered teachers, men and women, £180 non-resident and £115 resident; and for part-time teachers, *pro rata*. These salaries are to be entirely independent of any Treasury grant that may be available during the year. It will be observed that the principle is adopted of uniform salaries for men and women. It is not stated whether the Catholic heads of schools have agreed to these terms or not.

Honorary Degrees.

The Provost of Trinity College has received the honorary degree of D.D. from Oxford, and Trinity College has conferred honorary degrees on the following distinguished scholars:—D.Litt. on Mr. W. Crooke, C.I.E., a former scholar of Trinity, an authority on Indian ethnology; LL.D. on Lord Bryce, a former Chief Secretary, and Sir Donald Macalister, a former student and Principal of Glasgow University; D.D. on the Rt. Rev. F. H. Chase, Bishop of Ely, and the Rt. Rev. W. Paterson, professor of divinity, Edinburgh; and D.Sc. on Sir W. H. Bragg, F.R.S., professor of physics in London University, and R. A. Millikan, professor of physics in the University of Chicago.

Summer Courses for Teachers.

The summer courses for teachers organized by the Department of Agriculture and Technical Instruction are being held now for the twentieth successive year. A noteworthy feature this summer is that the Intermediate Board are also holding summer courses in the same building, the Royal College of Science. The total number of student teachers attending is 650, and of these two hundred are attending the Intermediate Board's courses in language teaching, French pronunciation, and elementary mathematics. Mr. T. P. Gill, the secretary of the Department and a commissioner of Intermediate Education, who is retiring this year, in opening the session, pointed out that this year some special courses were added to the usual ones. One of the most interesting of these was a course in turbines, steam and hydraulic, for teachers of engineering in technical schools, which had specially in view the fact that at the present time the world was seeking a more economical source of power than coal-produced steam, and that in Ireland the utilization of our water power and peat resources was in this connexion occupying particular attention. Regret was expressed that a sufficient number of students had not entered for a contemplated course in colloid chemistry, a knowledge of which subject is of great importance for the peat industry.

Irish Geographical Association.

The second annual summer meeting of the Irish Geographical Association consisted of two events, an address by the president, Prof. Grenville Cole, on "Why we teach Geography," and an excursion to Lambay Island, with a prefatory explanatory lecture by Prof. Seymour. Prof. Cole claimed that geography was to be taught as a description of man's place upon the globe, of the limitations imposed by natural surroundings, and of the triumphs of adaptation that had accompanied human settlement. It was a link in our educational systems between the artificially divided sciences and arts. The chief feature of the lecture was an appeal for the foundation in Dublin at one of the universities of a professorship of geography, the science of man's relation to the earth.

SCHOOLS.

WESTFIELD COLLEGE.—On the results of an examination held in the spring, the following scholarships of the value of £50 a year for three years have been awarded to students entering Westfield College (University of London), Hampstead, in October, 1920:—M. E. Barndale, Clapham High School; Drapers' Company Scholarship (classics). E. L. Grassman, West Ham High School; Drapers' Company Scholarship (mathematics). S. M. Fudge, Yeovil High School; College Scholarship (English). M. H. L. Orr, Royal School for Officers' Daughters, Bath; Amy Sanders Stephens Scholarship (history). R. Robinson, Queen Elizabeth's Grammar School for Girls, Barnet; Old Students' Scholarship (English).

The following College Exhibitions of £25 a year for three years have also been awarded:—D. J. Tranter, Bede Collegiate School, Sunderland (botany); E. R. White, Bedford High School (botany); D. Wyatt, Godolphin and Latymer School, Hammer-smith (English).

Research Studentships have been awarded as follows:—Miss Coate (assistant tutor in history at St. Hilda's Hall, Oxford), Research Studentship of £150 for one year, for research in connexion with the Civil War in Cornwall; Miss C. D. Thomas (student of Westfield College), Research Studentship of £30 for one year, for work in experimental psychology.

LONDON INTER-COLLEGIATE SCHOLARSHIPS BOARD.—The following awards have been made on the results of the examination held in May, 1920:—

University College.—Andrews Scholarship in Classics: Alice E. Engledow, City of London School for Girls. Andrews Scholarship in Arts: Constance M. Allen, James Allen's Girls' School, Dulwich. Andrews Scholarship in Science: S. W. Saunders, Erith County School. Campbell Clarke Scholarship: W. W. Miller, Latymer Upper School, Hammersmith. Goldsmid Scholarship (Science): G. W. Dorrell, County Secondary School, Brockley. Goldsmid Scholarship (Engineering): L. W. Ball, The Royal Grammar School, Guildford, and F. R. Kaye, St. Paul's School (bracketed equal, each receiving a moiety of the scholarship). Rosa Morison Scholarship: Dorothy K. L. Dunn, Wimbledon County Secondary School. West Scholarship: W. G. Stone, Leyton County High School.

King's College.—Sambrooke Scholarships in Science: W. E. Roberts, Bournemouth School; H. E. Baker, County Secondary School, Brockley. Engineering Scholarships: W. J. Edwards, Latymer Upper School, Hammersmith; A. R. Adams, Finchley County School. Open Scholarship, King's College for Women: Dorothy M. Riddell, Grey Coat Hospital, Westminster.

East London College.—(Subject to the approval of the Drapers' Company) Drapers' Company's Science Scholarships (Men): A. P. Rollett, Gainsborough Grammar School; D. A. Swift, Bancroft's School; J. R. Park, Battersea Grammar School; T. W. Leadbetter, Tottenham County School. Draper's Company's Science Scholarships (Women): Ella G. K. Cox, Brondesbury and Kilburn High School; Winifred L. Rolton, County Secondary School, Plumstead. Drapers' Company's Arts Scholarships (Men): W. Fox, Stationers' Company's School; A. H. Ross, Gainsborough Grammar School. Drapers' Company's Arts Scholarships (Women): Alice M. Few, Southall County School; Anne M. Gale, Southall County School.

Bedford College for Women.—Reid Trustees' Scholarship (Arts): Phyllis Hare, Aske's Hatcham Girls' School. Reid Scholarship (Arts): Faith S. Dew, Clapham County Secondary School. Pfeiffer Scholarship (Science): Dorothy Verney, Central High School for Girls, Manchester. Arnott Scholarship (Science): Francis D. Weaver, Sheffield High School.

REVIEWS AND MINOR NOTICES.

FRENCH LITERATURE.

- (1) *Cambridge Readings in French Literature*. Edited by ARTHUR TILLEY. (8s. net. Cambridge University Press.)
- (2) *Paul Louis Courier, A Selection from his Works*. Edited by ERNEST WEEKLEY. (5s. net. Manchester University Press.)
- (3) *Selections from Saint-Simon*. Edited by ARTHUR TILLEY. (7s. 6d. net. Cambridge University Press.)

(1) These three volumes are valuable additions to the national stock of books for students of French literature. Mr. Arthur Tilley, in his "Readings," introduces us to some authors who are little known to English people. Such are Henri Quatre, extracts from whose letters are given, as well as his lines to Gabrielle d'Estrees, Maurice de Guérin, Sorel, and Fromentin. He has included also a passage from Fustel de Coulanges' article on "Louvois et Bismarck," written in 1871, admirable alike for its diagnosis of the results of wars of conquest on the French character and its prediction of the consequences to the German character of the victory of 1870. The "Readings" are not all scraps. An extract from Michelet occupies twenty-four pages, and one from Sainte-Beuve twelve. Another feature is the number of extracts which relate to the great men of French history; of these, two are men of science, Claude Bernard and Pasteur. There are twenty-four reproductions of pictures by well known artists. Some of these will give students the opportunity of investigating the functions and limitations of painting and poetry. Brief notes on the authors are prefixed to the extracts.

(2) *Courier* is not an attractive personality. He was a cold-blooded and cynical dilettante, caring for nothing but the gratification of his peculiar tastes in art and literature; but he was an admirable stylist, and for his style students of French may read him with profit. But when Prof. Weekley specially recommends him for a sixth form "capable of appreciating literature," we are inclined to reply that there are many ways of appreciating literature, and the degustation of

style is only one way. Of the volume before us, about half is occupied with extracts from letters written by Courier while he was serving with the French army in Italy (he was incontestably an admirable letter-writer), and the other half with the "Pétition aux deux Chambres," the "Simple Discours," and other pieces, mostly of a satirical character. Our author was a trenchant satirist, and he did not allow any misplaced regard for truth and justice to spoil the effectiveness of his attacks. The introduction, in which Courier is not flattered, testifies to Prof. Weekley's impartiality, and the notes to his wide knowledge of literature. We should like to know his authority for saying that Masséna began life as a smuggler.

(3) The literature of Court life is mostly dull reading, but Saint-Simon is an exception. He had a magnificent subject, for the personal character of Louis XIV was a matter of vast importance both to France and Europe, and information about him and the circle of men and women around him has, therefore, a permanent value. To lengthy extracts giving us such information, Mr. Tilley has added thirteen of Saint-Simon's portraits, and these to many will constitute the most charming part of his book. Here are some of the finest and best Frenchmen of the day—Fénelon, Vauban, Beauvilliers, and others. An introduction gives all the necessary information about Saint-Simon, and a judicious warning about the confidence to be placed in writers of memoirs. There are also notes on the personages mentioned in the extracts.

CLASSICS.

Flosculi Graeci. Edited by A. B. POYNTON.
(7s. 6d. net. Clarendon Press.)

To write Greek prose well one must study the right models, and it is for having afforded a means to this end that Mr. Poynton deserves the gratitude of all classical schoolmasters. His volume is a delightful chrestomathy of immortal pieces of Greek prose, which will be a constant joy to the scholar (surely it could have been bound in cloth at the price?) who makes it his *vade mecum*. But schoolmasters will be most interested in its utilitarian side, and from this point of view we say without hesitation that we have never seen a book likely to be more helpful to the student. Mr. Poynton himself gives no guidance, but simply lets the Greeks speak for themselves both by precept and by example. The precepts are contained in sections upon literary criticism culled from Aristotle, Dionysius of Halicarnassus and Longinus, and the models are provided by an unusually good selection of short, but instructive passages typical of the style of Thucydides, Demosthenes, Plato, and others. Particular mention should be made of the third speech of Andocides, which—as Mr. Poynton mentions in his preface—is most useful for those who are beginning to acquire the elements of Greek style. Altogether the book is no less useful than it is charming.

Inter Lilia. By A. B. RAMSAY. (6s. 6d. net.
Cambridge University Press.)

Both the scholar and the practical teacher will welcome this book, the former for the charm and lucidity of the Latin, and the latter for the hints which can be derived from it for the teaching of Latin verse. It contains a few pieces of Greek and also of English verse—in which we venture to think that Mr. Ramsay is not always happy—but the majority of the pieces are Latin, and chiefly in elegiacs. The feature which we recommend to the teacher is the turning of English nursery rhymes, such as "Little Miss Muffet" and "The Old Woman who lived in a Shoe" into Latin, for no pupil can fail to see that in such an exercise the only thing that matters is the attainment of graceful form, and the same applies to verses to M. Blériot, and others upon topical themes, such as the shortage of paper. Needless to say, Mr. Ramsay never fails to charm, and his book will be a delight not only to old Etonians, but to all who buy it.

EDUCATION.

The America I Saw in 1916-1918. By L. H. M. SOULSBY.
(6s. 6d. net. Longmans.)

Miss Soulsby went to America for two summer months to change the groove of her mind. She stayed two years, going as delegate to an abnormal number of religious conferences, travelling all over the States, meeting the most cultured people, and staying as guest in many refined homes. She went down a gold mine in California dressed as a miner, she motored constantly, she floated on the Pacific in a glass-bottomed boat, she knows a good story when she hears it, she relates her adventures with considerable humour—and

yet she describes her eyes as old-fashioned. Though she went out determined not to study education, such an experienced teacher could not help making use of her opportunities, and she has an excellent section on "Child and Teacher—which is which?" Teachers will find the chapter on "History and Books" of interest and value.

"Publications of the University of Manchester."—*The Child Vision.* By D. T. OWEN (Mrs. D. Truman). (6s. 6d. net. Longmans.)

From the business point of view we think it would have been better if the title of this book had given a more precise indication of its contents. In effect it is a reinvestigation of the method of teaching composition to children. Progress has been made in this branch of teaching, but it has been slow. First, it needed to be driven home that, if a child is to write well, he must be given subjects that he *can* write about, not the hopelessly abstract subjects that it used to be the fashion to propose. Mr. Hartog, in his book on "The Writing of English," gave teachers food for thought in this respect. Mrs. Truman goes a step further. Proceeding from the simple proposition that children think more largely in visual imagery than do adults, she works out the consequences of that proposition for mental development and linguistic expression. The book abounds in apt illustrations, and deserves, whether regard be had to its theoretical basis or to its practical issues, the close attention of teachers who are tackling seriously the immensely important problem with which it deals.

An Introduction to Sociology. By Prof. J. J. FINDLAY.
(6s. net. Manchester University Press. Longmans.)

Here Prof. Findlay wanders from his legitimate subject. He makes no pretence of limiting sociology to its educational aspects, nor does he offer any excuse for his defection beyond the very satisfactory one that he is interested in what he here writes about. Naturally he cannot help drawing illustrations all the time from education. He does not do this deliberately; it merely happens so, since we all write out of the fullness of our knowledge. As he himself would put it, he has let his mind flow freely in the atmosphere of sociology, and let it take its chance. His mind has not failed him: readers will congratulate themselves on the result of his giving it a loose rein. Naturally the text is not over technical, and is not the worse for that. Further, Prof. Findlay can hardly be said to have come to any very definite conclusions on the important matters of which he treats. His method is rather expository and stimulating than dogmatic. There is much more of himself in the book than there is of Dr. Clow in his "Principles of Educational Sociology." Prof. Findlay gives us fewer quotations and more of his own thinking; his readers can almost trace the author's progress as he advances in his subject. There is a feeling of newly dried ink about the whole that is very inspiring. It is, to be sure, a matter of opinion, but the reviewer found the collection of the notes at the end of the volume, instead of at the foot of the pages, rather irksome in reading the book. Perhaps the best part of the work is that dealing with leaders and representatives. But the whole is stimulating in the highest degree. There is a reality about the book that is not common in works of this type. There are a serviceable index and two appendices.

"Brief Course Series in Education."—*Principles of Sociology, with Educational Applications.* By Dr. F. R. CLOW. (9s. net. Macmillan.)

This solid book of 436 pages is divided into three parts, the first dealing with the Factors of Society, the second with Social Organization, and the third with Social Progress. The general plan is to treat the subject in a broad way as sociology, but to deal with matters always in such a way as to bring out their educational bearing. It is not a matter of sociology and education. The educational bias is present throughout. The book is marked by an extraordinary amount of quotation. This is noted not by way of complaint—unless perhaps from the point of view of those from whom such liberal citations have been made—but of commendation. The book is self-contained, for all the material necessary for a thorough study of the subject is to be found within the boards of the book itself. The quotations fall into two classes, those from published work on the subject—for all of which permission has been obtained—and quotations without reference, these last being from the writing or conversation of personal friends or students of the author. At the end of each chapter there is a list of topics for further discussion, of problems to be solved, and of references for further reading. These references are not merely to certain books, but often to the pages of those books that deal with the precise points that are in order at the various stages. Even so, the amount of reading suggested is beyond the reach of any ordinary student going through a college course, if other subjects are to get any attention at all. This defect, however, leaves it in the power of the teacher to make a still more detailed selection of reading for

his pupils. The work is stimulating throughout. It finishes with a select list of books and with several useful indexes.

From a Common Room Window. By ORBILIUS.
(Oswestry: T. Owen & Son.)

The reflections of an experienced schoolmaster who possesses a facile pen are generally, to say the least, a welcome addition to the more academic and official literature of pedagogy; and we find the effusions of "Orbilius" no exception to the rule. He knows the humours of the situations and personalities met with in private and proprietary schools, and he can move his readers to mingled amusement, indignation, and contempt. The young teacher making a start, the supple and worldly-wise head master, the pompous and half-educated governor, the fussy parent, the seamy side of school reports—these and many other topics are faithfully though lightly dealt with. "Orbilius" so far writes as one having authority that we feel bound to accept his descriptions as genuine and his strictures as just. If we are right, educational reform has a long way to go yet; and the worst of it is that the schools he describes are the last to be reached by any movement of reform.

Report of the Conference on New Ideals in Education held at Cambridge, from July 25 to August 1, 1919. (2s. post free.
M. B. Syngé, 24 Royal Avenue, S.W. 3.)

The Conference on "New Ideals in Education" is to be congratulated on having "kept its end up" right through the period of the war, the first conference having met in the summer of 1914, and the sixth, the report of which lies before us, in 1919. A report of such varied contents and authorship presents of course exceptional difficulties to a reviewer—not, however, to the extent which is usual in educational miscellanies, because, as a matter of fact, last year's conference appears to have concentrated its attention upon a single theme, that of the creative impulse and its place in education. Some of the contributors deal with this subject in a general way, and others from the side of music, drawing, the artistic crafts, needlework, and the drama. The Committee could scarcely have planned a more timely programme, and teachers who desire that children should be something more and better than "little readers of print" (to quote a phrase from Prof. Lethaby's address) ought to read these stimulating papers.

Recreation. By Viscount GREY OF FALLODON.
(2s. 6d. net. Constable.)

It would, we imagine, be difficult to name a class of persons to whom the wise use of leisure is of greater importance than to teachers; and it would, we think, be equally difficult to name a better adviser, whether of teachers or of anyone else, than the distinguished author of this address, delivered at the Harvard Union last December. Few men living have had greater need to know the secret of escape from the cares of office; and that life should at times have been endurable to such a man is partly explained by the sanity and wisdom of the advice he here gives to others. Of course we can't all find our recreation in the same ways, but that we should find it somewhere, and find it effectively, is the lesson one takes away from this excellent address.

In Quest of an Ideal. An Autobiography. By E. HOLMES.
(6s. net. Cobden-Sanderson.)

When Mr. Holmes's famous educational manifesto, "What Is and What Might Be," appeared nine years ago, most people who read it must have thought what an unhappy fate was his, to have spent thirty years in administering a system in which he so thoroughly disbelieved; and one's sympathy was heightened by the reflection that here was obviously a man of singular intellectual force and of rare sensibility. But the autobiographical sketch now provided by Mr. Holmes seems to make it clear that such sympathy was to a certain extent wasted. In point of fact, he was not, after all, engaged during that long period in cutting blocks with a razor; he appears to have used the razor for other purposes and to have cut the blocks with a more appropriate tool. To drop the metaphor, his life seems to have fallen into two unconnected parts: one devoted to the drudgery of examining children under the accursed system of payment by results, and the other—a thing absolutely apart from the first—devoted to the writing of verse and to the excoigation of a philosophy which should satisfy his soul. For twenty years he was held fast in the grooves into which he had been drawn as a young man, and then when freedom came, with the abolition of the "annual parade day" in the schools, neither he nor the teachers were really ready for that freedom. He realized in a general way what was wrong, but he could find no remedy, still less the secret of normal health. "This," he says, "was hidden from me by my absorption in self, and my consequent inability, through lack of imaginative sympathy, to fathom the possibilities of the average man." For twenty years he had remained utterly blind to the potentialities of the little clodhoppers who came before him for so-called inspection. How his awakening came is described in the book to which we have

referred. That the awakening did come has been a fortunate circumstance for English education. Most of his less articulate contemporaries in the inspectorate probably remained blind to the end. To follow the course of Mr. Holmes's private thinking, from psychism to "amorism," and thence through humanism to "wholeness," is an interesting experience, especially to those who believe, as we do, that it is unsafe and unhealthy to leave philosophy entirely to the academic professors of that pursuit. The particular path by which he has reached his philosophy of "wholeness" is largely a matter personal to himself, but the philosophy in which his soul has found refuge ("the refuge, not of a safe harbour, but of the open sea") will be helpful and suggestive to many.

The Psychology of Persuasion. By W. MACPHERSON.
(6s. net. Methuen.)

The value of recent psychological investigations, especially in regard to the non-rational aspects of mind, including instinct, emotion, and sentiment, is amply illustrated by the variety of problems to which psychology is being applied. In the volume before us, for instance, Mr. Macpherson has really essayed the task of rewriting the old-fashioned treatise on rhetoric in the light of what we now know about the workings of the human mind. In his preliminary chapters he analyses persuasion as a mental process, exemplifies the forms of false persuasion, and suggests some counteractions. He then considers in succession wordless persuasion exercised by means of gesture and action, prestige and personality, music and painting and the cinematograph, and verbal persuasion as practised in salesmanship and advertisements, in speeches and in novels and plays. The book is interesting and well written; the author is well acquainted with modern developments of the science to which he appeals, and he draws his ample store of illustrations from a great variety of literary sources. He shows successfully that persuasion is a legitimate art which is often illegitimately practised, and that psychology has something to say on the subject which is well worth consideration, especially as a democracy is only too prone to become the victim of specious word-mongering.

ENGLISH.

The Philosophy of Speech. By GEORGE WILLIS.
(7s. 6d. net. Allen & Unwin.)

Two circumstances raised our expectations with regard to this book—the inviting nature of the title and the pleasure derived from the author's "Any Soldier to his Son." We will say at once that the book is well written, that it bears evidence of much scholarship, and is altogether original and stimulating; but in nearly every chapter the author takes up a position which will not be acceptable to many, and neither his opinions nor his facts will always bear close examination. The author believes that all time spent in school on English grammar is wasted: he probably is unaware that many of our elementary schools have already cut this out as a definite subject and that few teachers would teach it along the lines which he indicates. The chief value of grammar is that it is a great labour saving device when more advanced work is to be done. We would commend to his notice the difficulties encountered by the young lady who attempted to explain to Kipps the difference between "as" and "has." Where, however, the book will arouse most interest and opposition is the proposal that late Latin should be taught in all schools, even elementary. The object is to increase the child's vocabulary. It is stated, and rightly, that a page of a serious book is at present incomprehensible because the meaning of so many words is not known. Apart from the many practical difficulties, the question of the time-table and the like, we doubt whether the desired result would be gained. A word in modern English may be derived from a Latin root, but its meaning is so changed that only an older boy or girl can see the connexion. The Workers' Educational Association and many kindred bodies have shown other and better ways of enlarging vocabulary. In so far as the book is a plea for real education and against mere vocational training, it is on more certain ground and deserves to be widely read.

Coleridge: Biographia Literaria. (Chapters I-IV, XIV-XXII.)
Edited by GEORGE SAMPSON. (10s. net. Cambridge University Press.)

A very useful and well produced edition of this classic, with which are printed Wordsworth's Prefaces and Essays. It is late in the day to offer an appreciation of Coleridge's work, but it is well to remind ourselves that the revolution in English poetry brought about by Wordsworth and Coleridge can never be understood without a knowledge of what is contained in this volume. Prof. Quiller-Couch brings out the point clearly in his fine introduction. Mr. Sampson's notes are admirable; they give the reader just the information he needs, and are a model of accuracy and conciseness.

"The New World School Series."—*The New World English Course*. Book I, 2s.; Book II, 2s. 3d.; Book III, 2s. 6d.; Book IV, 2s. 9d. (Collins.)

This is an excellent practical series, each book consisting of a selection of short passages in prose or poetry from standard authors, well chosen for interest and variety, each passage being followed by helpful short notes, simple critical remarks, and careful and ingenious exercises based on the text. At the end of each volume is an appendix giving brief lives of the authors of the passages, an outline of grammar, an explanation of the rhetorical terms used in the notes and exercises, and a very short chapter on metre. One first-rate feature of the exercises is that the use of a deriving dictionary is regularly demanded. The volumes are light, and clearly and carefully printed, though we have met with one misprint on page 28, Vol. I. They contain respectively 87, 95, 102, and 103 pages. The précis of speeches by living politicians and of business correspondence—inserted, apparently as an afterthought, at the end of Vol. IV—might well be omitted from a course designed mainly to train children in the understanding and appreciation of literature, and well calculated to achieve its purpose.

Blackie's Compact Etymological Dictionary. Prepared by R. J. CUNLIFFE. (2s. net. Blackie.)

The low price of this work, for which we have nothing but praise, fortunately places it within the reach of all. The print, as necessitated by the size of the book, is small but clear. In the Latin words all the long vowels have been marked, while Greek words have been "transliterated letter by letter into the conventional English equivalents"—a real benefit to 999 out of every 1000 pupils who will never know even the Greek alphabet. Wherever recent research has proved the popular etymology doubtful or wrong, the compiler—quite rightly, we think—prefers to state that the origin of a word is obscure or unknown rather than give a misleading derivation. A young pupil is always discouraged by finding several alternative derivations suggested, none of which may be genuine. At the end is a selection of "terms of special note in modern warfare," which will soon be needed by pupils too young to have become familiarized with them during the war, while most of the terms will doubtless continue in common use in histories of the war or stories dealing with it. The set of "abbreviations and contractions commonly used" will also be helpful.

Exercises in English Composition for Junior Forms.

By E. E. KITCHENER. (1s. 9d. Murray.)

This "collection of material for practice" will be a boon to the class teacher, for, though designed as a companion book to the author's "English Composition," it can be used with any other textbook or without one. There is a mass (117 pages) of well graduated material, most of which is original and suggestive, while some of the exercises, such as that on page 18, will lighten the seriousness of the schoolroom. These might be reserved for some specially dull day, such as the morrow of the annual sports. It is, still, an open question whether such exercises as IX (2), page 12, or XXXI (c), page 65, are desirable for young pupils, many good authorities maintaining that the child should never see what is wrong. It is misleading, in a composition book, to refer to an order as a "question" [see VIII (2), page 12].

Practical Course of English Composition for Middle and Upper Forms. Book I. By W. J. GLOVER. (1s. 9d. net. Philips.)

In spite of its title, this book errs in being not quite practical enough. It assumes, especially in the early part, that a pupil will patiently read through clear expositions. But pupils in large classes can rarely be trusted to do this, and the teacher has to focus their attention on himself and on the blackboard to be sure that all are fixing their minds on the fresh matter to be acquired. Thus, in a book of this kind, the merest outline of the course to be pursued should be given for the guidance of the teacher, but the book in the hands of the class is needed to save time and trouble by providing exercises. In this volume far more of these are wanted, especially in the analysis at the beginning. There is, too, a curious mixture of easy and difficult. Presumably, the pupil who is ready to study paragraph-building, and can already recognize subordinate clauses, has long mastered the agreement between a verb and its subject. The excellent chapters on paragraph-weaving and sentence-structure should be most helpful and suggestive to the inexperienced teacher as well as to the pupil, while many of the exercises would be found most attractive by the imaginative child.

The Zoo Party. By GLADYS DAVIDSON. (9d. Nelson.)

Children of the First and Second Forms, for whom it is often difficult to find new reading matter, will be not only interested in this little story, but may also learn incidentally many interesting facts about the beasts who so artlessly vaunt their personal advantages.

We should like Chapters VIII and IX replaced by two more personal interviews with the animals. The print is large and clear and the illustrations satisfactory.

"English Literature for Secondary Schools."—*A Naturalist on the Amazons*. By H. W. BATES. Edited by Dr. F. A. BRUTON. (2s. 6d. Macmillan.)

These well chosen extracts from Bates's popular work deal mainly with the natural history of the Amazon forests, the writer's account of the towns he visited and of the various Indian tribes having been for the most part omitted. The selections are attractively arranged under headings; there are a short introduction and a few necessary notes. The eighty illustrations are charming, particularly those of single animals, and should be appreciated by readers in the fourth and fifth forms.

FRENCH.

(1) *French Passages for Reading and Recitation*. By LOUIS LATOUR. (4s. Methuen.) (2) *Poésies, Fables, and Chansons*. Edited by BASIL READMAN. (4s. 6d. Rivingtons.)

We couple these two books together, as they are both designed to supply matter to be learnt by heart; but they are framed on very different lines. (1) M. Latour's book contains 163 extracts from French authors, a good many of which are prose. Many are very short, and will lend themselves all the more easily to minute study. We notice eleven of La Fontaine's fables, five passages from Fénelon, three dainty morsels from Verlaine, and fragments of Déroulède, Jules Lemaitre, Verhaeren, Rostand, Richpin, and other very recent writers of whom school-boys and girls do not usually hear much. The two pieces for which a knowledge of the pronunciation of dialects is required are not likely to be of much service to English teachers, nor is the passage from "Les Plaideurs," full as it is of technical law terms. There are some brief and useful notes.

(2) Mr. Readman's book is of a more elementary character. It contains 26 "poésies enfantines," 54 "poésies diverses," 40 fables, and 20 songs with music. It is not very clear on what principle the editor has drawn the line between the first two groups. The fables are not all from La Fontaine; Florian, Viennet, and others have been called in to help. Do school children love fables so much as these books of selections seem to imply? We think of Lamartine and wonder. Mr. Readman has appended notes, many of which will be found unnecessary by well taught classes. The exercises will need to be used with caution. Some of the requests to put passages of poetry into the plural cannot be complied with without spoiling the metre. A most reprehensible form of question is: "Form nouns (or verbs) with . . ." In the first place, no one can "form" words in a foreign language; secondly, what is far worse is that frequently there are no words in the language derived from the words in question. Thus, we are told to "form nouns" from *également*, *sablonneux*, *honteux*, *orgueilleuse*, and so forth, and verbs from *volonté*, *poids*, *mort*, *découverte*, *protecteur*, &c.

GEOGRAPHY.

The New Era Rubber Globes. Nos. 1, 2, and 7. (4s. each. Hove: E. M. Walters & Co.)

These attractive globes are about four and a half inches in diameter, a very convenient size for class use; the various features are well coloured, and the names are clearly printed. No. 1 shows the political divisions of the world and chief trade routes; No. 2 the world's orographical features, heights of land and ocean depths; No. 7 routes of the chief explorers and dates of discovery. Although the globe can never take the place of an atlas for detailed work, it should always be in evidence in the geography room, and it should be looked upon as an essential part of the equipment of the geography lesson. A globe is indispensable for lessons on latitude and longitude, comparisons of areas and ocean trade routes, and for such lessons these globes are particularly suitable. If possible, each boy should be supplied with a globe for his own use, so that he may learn how to study it intelligently. Whether it is necessary to supply him with several globes is a more doubtful matter, and must be left to the discretion of the individual teacher. On No. 7, the routes taken by the expeditions of Magellan, Drake, and Cook are distinctly marked, and so a boy can really see what is meant by circumnavigating the world. On this globe, the date on which Peary reached the North Pole should be given, and Shackleton's furthest south should be corrected.

The Royal Guide to Windsor Castle. By Sir W. St. J. HOPE. (3s. 6d. net. S.P.C.K.)

This useful little guide consists of a short history of the castle and an itinerary of those parts of the castle usually shown to visitors. The book is illustrated with a copy of an old print showing a bird's-eye view of the castle as it was in 1660; there are also plans of the Lower Ward and Upper Ward respectively.

"The Atlas Geographies."—Part III: Senior Geography.

No. 2: *Europe*. By T. FRANKLIN. (7s. 6d. net. Macmillan.)
The lessons in this book are based, as far as possible, on the natural regions of the continent. The various parts of each lesson are presented with great clearness, and at the end of each lesson exercises are set to test the knowledge of the reader. There are many excellent diagrams and coloured maps, and they are intended to make the use of an atlas unnecessary. Several route and production maps (e.g. France) are printed on transparent paper, and, corresponding to these in size, coloured orographical maps are supplied in a pocket at the end of the book. The orographical map is to be placed under the route map in order to study the relation of the routes to the relief. The idea is good, but, from what we know of the average schoolboy, the first map will soon be torn and the second one lost.

Philips's Record Atlas. Victory Edition. Edited by G. PHILIP. (10s. 6d. net.)

All the maps in this atlas are political, and so they will be more useful to the general reader than to the student of geography. The maps are well printed, effectively coloured, and full of detail. The new boundaries due to the peace settlement are correctly drawn, both in Europe and in other parts of the world. A comprehensive index of 128 pages will enable the reader to find without delay any place of importance.

Philips's New School Atlas of Comparative Geography. New edition. (3s. 6d. net.)

This atlas of comparative geography is particularly suitable for use in the middle and lower forms of secondary schools. In many cases the physical map of the country or continent is placed opposite the political map, so that the two may be studied together. Among the orographical maps, No. 26 (the Alps and Northern Italy) is a model of what such a map should be. The rivers and contours are plainly marked, there are few names, and the highland and lowland are well contrasted by means of effective colouring.

"Cambridge County Geographies."—(1) *Dumbartonshire*. By Dr. F. MORT. (2) *Orkney and Shetland*. By J. G. F. M. HEDDLE and T. MAINLAND. (3s. 6d. net each. Cambridge University Press.)

These books, well printed and beautifully illustrated, conform to the general plan of the other volumes in this series. They contain much interesting and valuable information, and will be found useful, not only in the schools of the particular locality, but also to the general reader far beyond the county described.

"Macmillan's Geographical Exercise Books."—*Key to Physical Geography*. By B. C. WALLIS. (4s. 6d. net.)

The author states that this key is intended to help the busy teacher. It will certainly fulfil this purpose, and at the same time be very useful to students who wish to check their own work and to see the style in which their maps and diagrams should be drawn. Both illustrations and text are printed with great clearness and accuracy. Some of the sections (e.g. Fig. 35) might with advantage be drawn to a less exaggerated vertical scale.

HISTORY.

A History of England to 1485. By CYRIL E. ROBINSON. (5s. Methuen.)

This volume, by the History Master at Winchester College, is the first section of what is destined to be a four-volume history of England. One asks, as one thinks of the excellent and recent textbooks of Warner and Marten, Innes, and others—to say nothing of such old favourites as Gardiner, Oman, and Tout—all of which are still running, what possible justification there can be for the introduction of another into the well filled field. Mr. Robinson's work has many good qualities, but we do not note any so conspicuous as to place it in a class above its predecessors. It is written in a clear and attractive style; it presents a simple and lucid narrative, freed from the distraction of minor incidents; it is marked by sobriety of judgment and considerable political insight. Occasionally some of the information conveyed seems a little antiquated. The retention of the name, "Battle of Senlac," for the struggle of 1066 argues unacquaintance with the destructive criticism of Mr. J. H. Round. The plan of the Battle of Bannockburn does not fit in with the view of the great fight regarded as accurate by Mr. Mackenzie, Dr. Morris, and Prof. Tout. These, however, are but details. The book, as a whole, is a sound and scholarly piece of work.

"The National History of France."—*The Seventeenth Century*. By JACQUES BOULENGER. Translated from the French. (12s. 6d. net. Heinemann.)

This is the third volume of the excellent popular series of French histories produced under the editorship of M. Funck-Brentano, and now being translated for English readers. We are not told by whom the translation has been done, but it has been done very well. The

book reads like one of native origin, and there is hardly a trace of foreign idiom. The period covered in this volume is that between the dates 1610 and 1715; it opens with the assassination of Henri IV and ends with the senile decay of Louis XIV. This long century comprised only two reigns, but they were reigns of first-rate interest and importance. That of Louis XIII was illustrated by the genius of Richelieu. The opening years of Louis XIV saw Mazarin skilfully carrying out the great designs of his predecessor. The central years of the reign of the "sun king" were unparalleled in magnificence: France was not only the political centre of Europe, she was also the leader in arts, sciences, and civility. M. Boulenger's fascinating history not only traces the narrative of events during the period; it further presents a vivid picture of the social life of the time, and of the culture and humanity which flourished so luxuriantly under the patronage of the splendid court.

Belgium: the Making of a Nation. By Prof. H. V. LINDEN. Translated by S. JANE. (7s. 6d. net. Clarendon Press.)

This sketch of Belgian history was written in French by M. Van der Linden, Professor in the University of Liège, during a period of exile which he spent in Oxford while the recent war was raging. It is now presented to English readers in an excellent translation by Miss Sybil Jane. Considering the circumstances in which it was written, we regard it as remarkable not only for its fullness and accuracy, but also for its freedom from passion and prejudice. It is true that the Germans receive a few shrewd blows which suggest that the historian has not been able to forget that his home and his university were in their unholy occupation; but in the main the scientific spirit prevails. M. Van der Linden begins his sketch with the Roman Conquest; then traces the process of the Frankish invasion and the incorporation of the Belgian provinces into the empire of Charles the Great. He next shows how, on the break-up of that empire, the various feudal states took shape, and how they were gradually recombined first under the Dukes of Burgundy and then under the Kings of Spain: the economic importance of the Netherlands in the Middle Ages is well portrayed. The story of Belgium under Spanish, Austrian, French, and Dutch rule is more summarily treated. Finally, in fuller detail, is given the narrative of the attainment of independence in 1831, and the subsequent history of the kingdom.

The Real Wealth of Nations. By J. S. HECHT. (15s. net. Harrap.)

This is an original book, remarkably free from convention, and obviously the product of much independent thought. It is devoted to the task of proving that the future happiness of the world, together with the possibility of human progress, depends upon a vast increase in the productivity of industry. Far too many men produce no more than they consume, and thus add nothing to "the real wealth of nations." Some produce less than they consume, and so are positive burdens upon the economic community. Among these non-producers the author includes not only merchants and shopkeepers, and "other unnecessary middlemen," but also—shades of the Triple Alliance!—miners, transport workers, and railwaymen. He thinks that the prime duty of Government is to stimulate production, and he lays down many specific methods by means of which it may do so. We may note that his proposals involve a rigid State control of economic processes—including distribution and exchange—which would make Adam Smith, author of the unreal "Wealth of Nations," turn in his grave. Economists will read Mr. Hecht's book with curiosity. For it challenges all their conclusions, abandons all their definitions, and advances as "the real axioms of economics" a number of paradoxes which they will be inclined to say are nonsense.

The Great War, 1914-1918. By C. R. L. FLETCHER. (6s. net. Murray.)

Mr. Fletcher is a writer—learned, vigorous, illuminating—who approaches all the historical problems of which he treats with passion freely expressed and prejudice frankly avowed. As a rule, he has no need to be ashamed of his emotions: they are normally sane and healthy. At all times, however, they obscure his judgment and impair his trustworthiness as a guide. Down to 1914 he was pronouncedly and uncritically Teutonophile; for the Slavonic peoples he reserved his choicest vocabulary of loathing and contempt. Since the outbreak of the Great War Slavs and Teutons have changed places in Mr. Fletcher's regard, and no language is too strong in which to describe the barbarities of the Germans or the inanities of their English friends. This would be all right if one could feel that the change of attitude were due to study or reflection, but one has a painful consciousness that it is attributable solely to circumstances. Apart, however, from this subjective defect, Mr. Fletcher's brief sketch presents an admirable survey of the course of the war. Mr. Fletcher freely admits that, written immediately after the Armistice, it will probably need to be

corrected in many details as further knowledge becomes available; but meanwhile it serves a useful and patriotic purpose.

A Short Sketch of European History. Part I: From the Fall of Rome to the Reformation. By H. E. MARSHALL. (5s. Black.)

Mrs. Marshall has achieved a well merited popularity in many schools by means of her admirable sketch of English history for young children published under the title of "Our Island Story." She has followed up this initial success by issuing various other similar surveys, and now she ventures upon the wider field of European history. The story which she tells has all the old characteristics of lucidity, brevity, and interest. In forty-four chapters it covers the thousand years which divided the Fall of Rome from the rise of the modern national states—that is, the era of the Middle Ages. Mrs. Marshall succeeds well in reducing this complex period to order, and she manages to give some sort of unity and continuity to her story by ignoring the details of the histories of the different peoples and by concentrating on matters of continental importance. This volume lacks the illustrations which made "Our Island Story" so attractive to children. It has, however, in compensation, a dozen good maps which, to students, are preferable to pictures. The book may be commended as a convenient introduction to early European history.

"The Unity Series."—*Recent Developments in European Thought.* Essays arranged and edited by F. S. MARVIN. (12s. 6d. net. Milford.)

Mr. Marvin's Summer Schools at Woodbrooke, near Birmingham, have become recognized educational institutions. Their founder has not only a genius for selecting interesting and important topics for consideration, but also a marvellous gift in choosing the right persons to treat them and in persuading or compelling them to do so. The question of recent developments in European thought is one of great attraction but supreme difficulty. It is much easier to judge of movements when they can be surveyed from a distance than it is to estimate them from their midst. But, if difficult, it is eminently desirable that the people of to-day should realize whither the stream of ideas tends to carry them. Hence they will find these lectures extremely illuminating. The period covered is broadly the last fifty years. Mr. Marvin himself presents a general survey of the era—a survey marked by his usual cheery optimism and his confident faith that order and progress can be combined. The other contributions are by eminent specialists, and relate to philosophy, religion, poetry, history, political theory, economics, chemistry, biology, art, and music. Miss F. M. Stawell winds up the series with a hopeful appreciation of the Modern Renaissance. Every thoughtful student of current affairs should read this stimulating symposium.

MATHEMATICS.

The Theory of Determinants in the Historical Order of Development. Vol. III. By Sir T. MUIR. (35s. net. Macmillan.)

This third volume of the history of determinants covers the period 1860 to 1880. The earlier periods were predominantly those of research and discovery; but, now that the foundations had been well and truly laid, and a very considerable superstructure erected, writers began to busy themselves with the publication of comprehensive descriptions of the building. During the twenty-one years under review there appeared no fewer than sixty textbooks dealing with determinants alone, and several others in which the subject forms an important part. Glancing through the summaries of the various works, we notice a very useful condensation method for the evaluation of numerical determinants, which seems to have been completely ignored by subsequent writers. It was invented by C. L. Dodgson, author of one of the aforementioned textbooks. But the period was not merely one of compilation; steady progress was made in many directions, and it witnessed the introduction of the infinite determinant by Hill in his researches on the motion of the moon. Sir Thomas Muir makes all students of mathematics his debtors by his masterly summary.

"Pitman's Library of Commercial Education."—*The Principles and Practice of Commercial Arithmetic.* By P. W. NORRIS. (7s. 6d. net.)

This book is significant of the wider outlook which now prevails in the teaching of commercial arithmetic. It is divided into five sections, of which the first deals with the principles involved in calculation. We are glad to see that the author has had the courage to introduce a certain amount of elementary algebra. He is thereby able to prove, and not merely state, the rules for operating with logarithms, and to justify other processes of calculation. There is a very full discussion of the limits of accuracy in contracted methods, but we think the statement in paragraph 54, regarding the minimum

amount of work necessary to ensure a given degree of accuracy in continued multiplication is not quite correct. The expansion of $(10 + 10^{-1})^n$ by the binomial theorem will give a better estimate of the work necessary. This section also contains chapters on graphs and mensuration. The purely commercial sections are four, and deal respectively with The Business Undertaking, Trade, Finance, Transport and Insurance. The information they give on the matters of which they treat is trustworthy, and as nearly up to date as can be expected under present conditions. The student will find the book will not only equip him with the knowledge requisite to pass examinations, but help him in actual business life.

SPANISH.

"Heath's Modern Language Series."—*Commercial Spanish.*

By C. F. McHALE. (5s. net.)

The compiler aims at covering in this book every phase of commercial life which the student of Spanish may have to traverse. It consists of three parts: the first, comprising sections dealing with the bases of international trade, includes chapters on commercial life, exchange, customs, banking, and insurance; the second deals with commercial documents; and the third treats exhaustively of mercantile formulae, advertisements, and market reports. To most of the chapters are subjoined complete questionnaires in Spanish, and this apparatus, added to a very full vocabulary and numerous illustrations, makes this book one of the best of its kind. In the hands of a good teacher it should prove exceedingly useful.

An Elementary Spanish Grammar. By JAMES W. BIRCH. (5s. Methuen.)

A grammar of the type which presents no new features, and is hardly distinguishable from those written ten years ago. Even the accentuation is not modernized. Each lesson consists of grammatical treatment and exercises (English into Spanish and *vice versa*). These latter comprise isolated sentences of this type: "We went fishing yesterday, but caught nothing. Come what may, you must speak the truth. He said he would go and look for it." We do not know for whom this book is intended, but we should have thought that in the fifty-third lesson even an elementary class would be prepared for more advanced work than is given here.

Matriculation Spanish Course. By J. B. PRICE. (Sleaford: J. B. Price, Grammar School.)

An uninspired work, which is the "revised edition of a Spanish course originally published in Spain for the use of Spanish students learning the English language." The accentuation is not modernized, and the author seems in doubt as to when to accentuate *¿qué?* We should like to meet the matriculation candidate who, after working through this book, could translate the passages on pages 60 seq. without considerable assistance.

Cuentos de la América Española. Selected and Edited by ALFRED COESTER. (4s. 6d. net. Ginn.)

This book contains selections from the authors of the various Spanish-speaking countries of America, chosen with a view to representing in the best way the "wide divergence in customs and temperament" of these countries. The stories reflect every side of South America, the Pampa, revolution, the cities, industries, and social life which, for the student of Spanish literature, present a wide and varied field in which to browse. This is the best selection we have yet encountered. The writers include men of established reputation, such as Rubén Darío, Martín Gil, Javier de Viana, and Eufemio Romero, writers of fantasy, history, and essays. It would be difficult for even the most fastidious teacher to improve on this book, whose form, critical notes, and vocabulary attest the master hand of the editor.

Primeras Lecciones en Español. Por CAROLINA MARCIAL DORADO. (4s. 6d. net. Ginn.)

A first reader in Spanish, turning on stories, anecdotes, dialogues, poems, plays, and songs, with the view of interesting the younger pupil in Spanish life, when it bears the name of Señora Dorado, must necessarily meet with a welcome. This latest volume is worthy of her. One meets with the same phrases, idiomatic and grammatical, used with frequency throughout the book, so that the young student of Spanish will find the matter fairly easy to assimilate. Questions and exercises provide a review of the main facts of Spanish grammar. The set-up and general appearance of this volume is very pleasing, and we anticipate a successful future for it.

El Licenciado Vidriera (Cervantes). Edited by E. ALLISON PEERS. (1s. 6d. net. Harrap.)

This selection from the "Novelas Ejemplares" of Cervantes is edited with an introduction, notes, and vocabulary. The work of editorship has been well done, and this small volume is a welcome addition to the comparatively small band of texts at the disposal of the teacher of Spanish.

PRIZE COMPETITIONS.

THE prize for the July competition is awarded to "Ucalegon," and the second place to "Shax."

The winner of the June competition is Mr. H. Marshall, 31 Lushington Road, Eastbourne.

Extract from Paul-Louis Courier's Letters.

By "UCALEGON."

If you still keep any recollection, Madame, of the humblest of your servants, you will, I fancy, be interested to learn that I am living at Reggio, in Calabria, at the far end of Italy, further than I ever was from Paris and from you, Madame. During the six months that I have been meditating a letter to you, I have not been prevented from writing by want of matter, but of time and leisure. For we are winning our battles in our stride, and have never stopped till we got here, where land has failed us. That's a pretty smart conquest of a kingdom, I should say, and you ought to be pleased with us. But I, for my part, am not satisfied. All Italy is nothing to me if I can't add Sicily to it. I say this simply to keep up my character of conquering hero, for, between ourselves, it's little I care whether Sicily pays her taxes to Joseph or to Ferdinand. On that subject, I should be very willing to conclude an agreement, provided that I was allowed to ramble there at will; but to have come so near, and not to be able to set foot on it, isn't it enough to make one mad? We do, indeed, see it, as you from the Tuileries see the Faubourg Saint-Germain; I assure you the strait is scarcely broader, and yet we are at a loss how to cross it. Would you believe that we are held up by that trickle of salt water? But there isn't a single boat, that's the rub. Some are coming, so they say; as long as I have this hope, do not imagine, Madame, that I ever cast a look behind to those scenes where you dwell, much as they delight me. I want to see the land of Proserpine, and to get some idea why the devil took a wife from that country. I do not hesitate, Madame, between Syracuse and Paris: out-and-

(Continued on page 558.)

Guy's Hospital Medical School.

The Hospital, which is situated two minutes' walk from London Bridge, contains 644 beds.

Students are appointed to Dresserships and Clerkships in the Wards and Out-Patient Departments on the sixteenth day of January, April, July, and October. All Students hold the following posts in turn: Surgical Ward Clerk, Medical Ward Post-mortem Clerk, Surgeon's Dresser, Dresser in a group of Special Departments, Obstetric Dresser and Extern Obstetric Assistant. Numerous other posts are open for application.

The Medical School Buildings have all been erected or rebuilt since 1904, the Department of Anatomy in 1904, of Biology in 1905, of Physiology in 1910, of Chemistry in 1910, of Physics in 1910, and of Pathology in 1912. The Wills Library was presented in 1903, the Gordon Museum in 1905.

The Students' Club and Residential College were erected in 1890. The Club contains reading, dining, and smoking rooms, while the College affords accommodation for about 60 Students, who may be summoned to the Wards at any hour of the day or night.

Adjoining the Club are the Pavy Gymnasium, a covered swimming bath, and a squash racquet court. The Athletic Ground, of nine acres, is situated at Honor Oak Park, distant about 15 minutes by train.

FEES AND COURSES.

FIRST YEAR—For Preliminary Science Course: £22. 8s. for 12 months or less period, deducted from the Entrance Fee payable as a Second Year's Student. A special fee of £7 is charged for materials for this course.

SECOND OR THIRD YEAR (after First M.B.): Entrance Fee, £28. Annual composition fee, £49, including all necessary materials.

FOURTH YEAR (after Second M.B.): Entrance Fee, £14. Annual Composition fee, £49, including all necessary materials.

Provided a Student has paid three annual composition fees, a proportionate rebate will be allowed from the last on his obtaining an approved qualification at any time within nine months of the last payment.

Entrance Scholarships to the value of £660 are awarded annually in September.

For further particulars, and permission to be conducted over the School Buildings, application should be made to

THE DEAN, GUY'S HOSPITAL, S.E.1.

UNIVERSITY OF EDINBURGH.

Secretary to the University: WILLIAM WILSON, M.A., LL.B., Advocate.

The **Summer Session** extends from about the middle of April to the end of June; in Law, from May to July.The **Winter Session** opens about the beginning of October and closes about the middle of March.

The University embraces **Six Faculties**, viz.: **Arts, Science, Divinity, Law, Medicine and Surgery, and Music**, in all of which full instruction is given and Degrees are conferred. There are many different avenues to the **Degree of M.A.** (Honours and Ordinary), the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The wide scope of the Arts Curriculum permits of the combination of Arts, Science, Medical, or Special Studies; and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of Ph.D., D.Litt., and D.Sc. are conferred. The Degree of **Bachelor of Education** is conferred on candidates who have attended Courses and passed Examinations in Psychology and in Education (Theoretical and Practical). A Diploma in Education is also conferred. A Degree of **Bachelor of Commerce** (B.Com.) has been recently instituted, and Special Courses in various Commercial subjects have been provided. **Diplomas** are granted in **Geography** and in **Actuarial Mathematics**. Degrees in **Science** (B.Sc. and D.Sc.) may be taken in **Pure Science, Engineering, Public Health, and Veterinary Science**; and the Degree of B.Sc. in **Agriculture and Forestry**. Temporary Regulations have been framed for a **Diploma** and a **Certificate in Forestry** for the behoof of Officers and men who have served in the War. There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in **Divinity** affords a thorough training in Theological subjects, and the Degree of Bachelor of Divinity (B.D.) is conferred. The **Law** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and Constitutional History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of **Medicine** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, Royal Asylum for the Insane, and other institutions. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.); and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A **Diploma in Tropical Medicine and Hygiene** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and specially approved Medical Practitioners who have resided abroad. There are also **Diplomas in Public Health** (D.P.H.) and in **Psychiatry** (Dipl. Psych.). In **Music** there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 50 Professors, over 90 Lecturers, and about 60 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is over £21,000. Facilities are afforded for research in scientific and other subjects: and numerous Post-Graduate.

Women may attend the Classes in all the Faculties, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music.

Information regarding admission to the University, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by Mr. JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 5d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Preliminary, 1s.; Arts Bursaries, 6d.; Degree papers: Arts, 1s.; Science, 1s.; Divinity, Law, &c., Medicine, 6d. each; Music, 3d.

1920.

By order of the Senatus,

WILLIAM WILSON, Secretary.

ST. MARY'S HOSPITAL MEDICAL SCHOOL, PADDINGTON, W.2. (University of London.)

THE WINTER SESSION will begin on October 1st, 1920, when students can join classes in Preliminary, Intermediate, or Final Subjects.

Special features of this Medical School are:—

Healthy West-end Situation.
1,000 Beds for Clinical Teaching.
Athletic Ground of 10 acres.

Owing to the recent affiliation, for teaching purposes, of the Paddington Infirmary, Paddington Green Children's Hospital, and the Maida Vale Hospital for Nervous Diseases, the scope of the Clinical Instruction has been greatly increased.

Full particulars and prospectus may be obtained from the DEAN.

Posts Vacant—continued.

These School and Teachers' Advertisements are continued from page 555.

The person appointed will be required to assist in the organization and supervision of Physical Training in elementary schools in the county and to undertake such other duties in connexion therewith as may be determined.

Further particulars and forms of application, which must be returned before August 17th, may be obtained from the undersigned.

The Moothall,
Newcastle-on-Tyne.
July, 1920.

C. WILLIAMS,
Director of Education.

out ockney though I be, still I prefer Arethusa to the Fountain of the Innocents.

The prize-winner caught the lightness and briskness of Courier's style better than did any of his rivals, except perhaps one, who unfortunately ruined his chance by using "like" for "as"! But the version is open to some criticism. The first sentence should run something like this: "However little, madam, you may remember the humblest of your servants, I fancy you will not be sorry to hear that I am alive and at Reggio." For *canal*, the best word is "channel," which applies equally to a river and a strait, and the worst is "canal." *Quoi qu'ils me plaisent fort*: a large number of candidates translated, "though I love them much," an expression of strong feeling quite at variance with Courier's character. Many failed over the last sentence. *Badaud* is the man who lounges about town; *tout . . . que*, with indicative, is always "though"; *Aréthuse* is the fountain in Sicily, where

"Arethusa arose
From her couch of snows,"

while the *Fontaine des Innocents* is at Paris.

The prize-winner is reminded that to underline words in a translation which are not italicized in the original is a confession of weakness.

"F.W.M." is requested to state whether the full name which he appends to his versions is a real name or a pseudonym.

We classify the 100 versions received as follows:—

Class I.—(a) Ucalegon, Shax, Thersites, Beaver, Onus, F.W.M., Edimbourgeoise, John Edals, Defiance, Esse quam videri.

(b) Rex, Emile, Ray, E.M.H., Menevia, Ibex, Primrose, A.P., Bésigue, London Topaz, Leander, Galloise, Sirach, Mike, Thusera, Nihil, Clarence Clovelly, Ange Bleu, Vidi.

Class II.—McD., Van, B.O.P., Virginia, Quae supra, White Heather, Fifi, Rosemary, Tregonissey, Bugle, Hibernia, Cerdin, Zephyr, Spes, Tregorrick, Sports, Fitzalain, Jolande, W.J.T., Ivy, Borealis, Augustus, D.W.D., Noémi, Frog, Bobby, M.B.H.M., Agricola, Ninon, Sirius, Robert le Diable, Orpheus, Eugène, Bébé, Novice, Brawney, Bedford, Brian Boru, Spaghetti, Mimi, Hesperus, Simplicité, Madam, Marquillera, Saton, Sago, Florah, Ted.

Class III.—George, Macaroni, G.C., Wyoming, J.S., Vermicelli, A.H.McC., Feugh, W.D.M., Gisèle, K.I.S., Corsica, B.A., Gato, Yorkshire Lassie, C.W.S., Réalto, F.W.B., Semolina.

Class IV.—Mineur de Charbon, Imogen, Tapioca, Styx.

A Prize of Two Guineas is offered for the best translation, in prose or verse, of the following lines by Richard Dehmel:—

DIE STILLE STADT.

Liegt eine Stadt im Tale,
Ein blasser Tag vergeht;
Es wird nicht lange dauern mehr,
Bis weder Mond noch Sterne,
Nur Nacht am Himmel steht.
Von allen Bergen drücken
Nebel auf die Stadt;
Es dringt kein Dach, nicht Hof noch Haus,
Kein Laut aus ihrem Rauch heraus,
Kaum Türme noch und Brücken.
Doch als den Wanderer gräute,
Da ging ein Lichtlein auf im Grund;
Und durch den Rauch und Nebel
Begann ein leiser Lobgesang,
Aus Kindermund.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on August 16, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

SHAKESPEARE.—For Oxford and Cambridge Locals.

LECTURE RECITALS by Mr. ADRIAN HARLEY

1920, "The Tempest," "Hamlet," "Julius Caesar," &c.

From the Rev. E. HARTLEY-PARKER, Head Master, London Orphan School, Watford.—"In his Lecture Recital on 'As You Like It,' Mr. Adrian Harley absolutely held his audience. . . . Not only was his lecture an educational and literary treat, but the dramatic power with which he portrayed the several characters made the play alive."

SCHOOL TRANSFER DEPARTMENT.

Telephone:
Gerrard 7081.

Schools transferred and valued. No charge whatever will be made to vendors of Schools or School Partnerships by Messrs. GRIFFITHS, POWELL & SMITH unless a sale is effected or agreed upon. No commission charge whatever made to Purchasers of Schools or School Partnerships.

Applications from intending purchasers are solicited for the following properties:

GIRLS'.

West of England.—High-class Boarding and Day School for Girls. Established and conducted by vendor 13 years. Gross receipts past year, £2,000. There are 17 Boarders paying from 60 to 75 guineas per annum, according to age, and 30 Day Pupils, paying 4 to 5 and 7 guineas per term. Rent of one house, £35. Price for goodwill by arrangement.—No. 7,126.

Channel Islands.—Boarding and Day School for Girls. Gross receipts past year, £500. Net profits past year, £280. Rent of very fine house, with large and well ventilated rooms, 1 year of lease to run, but could be renewed for 3 years on same terms, £60. There is 1 Boarder paying £2 per week and 60 Day Pupils paying from £1. 10s. to £3. Price for goodwill, £350. School furniture, £50; part of household furniture, £150.—No. 7,131.

Surrey.—Girls' Boarding and Day School. Gross receipts past year, £1,000. Average gross receipts past three years, £900 to £1,000. Net profits last year, £200. Number of Boarders 9, paying £50 to £60 per annum. Number of Day Pupils 29, paying £3. 3s. (mornings only), and £6. 6s. per term for ordinary pupils. The Vendor will accept

1½ terms' fees for goodwill. School furniture at valuation.—No. 7,163.

Surrey.—Day School for Girls with Kindergarten Department. Gross receipts past year £365. Average gross receipts past three years £342. Number of pupils 29, paying from 2 to 3½ guineas per term. Rent of detached house £52. Price for goodwill by arrangement.—No. 7,165.

Devon.—Middle-class Boarding and Day School for Girls. Little Boys up to 9 taken. Established 45 years. Gross receipts past year, £828. 1s. 4d. Net profits past year, £361. 16s. 1d. 13 Boarders paying £11. 11s. to £13. 13s. a term, and 46 Day Pupils paying £1. 1s. to £2. 16s. per term, without extras. Rent of detached house, with fair sized garden, only £35 yearly tenancy. Price for goodwill about £550. School and household furniture at valuation.—No. 7,164.

Hunts.—Girls' Boarding and Day School. Boys taken up to 10 years of age. Established about 60 years. Gross receipts for past year, £614. 13s. 6d. Number of Boarders, 8; terms £30 to £33 per annum, and extras. Number of Day Pupils, 45; terms 4½ to 10½ guineas per annum, according to age. Rent of house, £55 yearly tenancy. The vendor is willing to accept one term's fees by way of premium for goodwill. Furniture at valuation.—No. 7,162.

BOYS.

Kent.—Boys' Boarding and Day School. Established many years. Gross receipts past year, £4,000. Number of Boarders, 70, terms average 50 guineas per annum. Number of Day Pupils, 10, terms average 21 guineas per annum. Extras about £300 per annum. Rent £80 per annum—11 years of lease still to run. Price for goodwill, £1,350. Household, private, and school furniture, £2,000. Total for the whole place, £3,350—£2,000 to be paid down and the balance by instalments.—No. 8,049.

London, S.W.—A client of ours who has an old-established School in a good residential neighbourhood in the south-west of London is prepared to sell to a suitable purchaser. The School appears to be a most successful one, and we should say a genuine investment. We understand there are 110 Pupils, of whom 17 are Boarders. The latter pay 63 guineas per annum, and the Day Pupils about £12 per annum. Rent of good house, £95 per annum, held on 12 years' lease with break at every 3 years. Very considerate landlord. Price for goodwill, £1,500. School furniture at valuation, or freehold of house, goodwill, and furniture, about £3,000.—No. 8039.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—
GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 and 13 Henrietta Street, Covent Garden, London, W.C.2.

The Journal of Education and School World

BOUND VOLUME FOR 1919 is Now Ready.

A FEW OPINIONS OF THE PRESS

"A publication which must claim the serious attention of every student of educational progress."

—THE TIMES

"The best record of English Educational Thought and Practice."

—MONROE'S CYCLOPÆDIA OF EDUCATION

"The comprehensiveness of its survey of the educational field is well known. Moreover, it is written throughout by those who have an intimate acquaintance with the subjects of which they are treating."

—THE GUARDIAN

"Besides being a useful record of the educational events of the year, it forms a valuable miscellany of essays and general articles interesting to teachers."

—THE SCOTSMAN

"Continues to occupy the premier position. It has unrivalled facilities for learning what is being transacted behind the scenes, and its columns are open to every shade of opinion."

—THE OXFORD MAGAZINE

"The Journal of Education.' This has made its way to the top rank of educational journals. Nowhere can we find a more carefully recorded chronicle of events, better considered judgments on questions of the day, or more competent criticism of educational literature."

—THE SPECTATOR

"The first in this country to devote itself to the work of Education as a whole, without regard to any particular sect or society. It numbers among its contributors a more brilliant group of scholars, perhaps, than any similar periodical."

—THE PALL MALL GAZETTE

"A publication which has long since established itself as one of the most readable and useful journals for teachers."

—THE BIRMINGHAM DAILY POST

ROYAL AIR FORCE SCHOOLS OF TECHNICAL TRAINING (BOYS)

APPLICATIONS are invited for a number of vacancies in Grade III (Assistant Masters) on the Civilian Educational Staff of the Schools for BOY MECHANICS at the undermentioned Royal Air Force Stations:—

CRANWELL, near SLEAFORD, Lincs.
HALTON, near WENDOVER, Bucks.

The subjects of instruction include Practical Mathematics, Applied Mechanics, General Physics, Drawing, and English (language, literature, geography, history, and civics).

Candidates must possess a University degree or equivalent qualification, and will be required to teach either (1) Mathematics and Science, or (2) English, preferably with Mathematics or Science as a subsidiary subject.

The Salary scales, to which the full Civil Service bonus will be added, are as follows:—

Grade	Basic Scale.	Approximate rate with current bonus (subject to variation)
I (Head Master)	£450-20-£550	£757 to £904
II (Senior Master)	£250-10-£300	£464 to £757
	15-£450	
III (Assist. Master)	£150-10-£200	£308 to £611
	15-£350	

In fixing the initial rates of salary in appointments to Grade III allowance may be made for previous experience of a suitable character up to a maximum of ten years (ten increments of the scale).

For those who complete three or more years of service there will be a scheme of deferred pay in lieu of pension.

Forms of application with further particulars can be obtained on application to the SECRETARY (T.2.b.), Air Ministry, Kingsway, W.C.2.

MEDICAL SCHOOLS and COLLEGES.

UNIVERSITY COLLEGE
HOSPITAL MEDICAL SCHOOL
(UNIVERSITY OF LONDON).
UNIVERSITY STREET, GOWER STREET, W.C.1.
Telephone: Museum 7026.

The WINTER SESSION will commence on the 1st OCTOBER, 1920.

The SCHOOL is for Final Studies only, and gives a complete curriculum to Men and Women Students for all the Final Examinations.

CLINICAL UNITS under whole-time Directors and Assistants have now been established. These Directors are responsible for the teaching of the principles of medicine and surgery, while the practical teaching is largely in the hands of the honorary staff of the Hospital.

FEES.—For the Final Course, 112 guineas if paid in one sum, or 115 guineas paid in two instalments of 70 and 45 guineas.

DENTAL STUDENTS (Men and Women) can obtain a complete curriculum at University College, University College Hospital, and the Dental Department of University College Hospital (the National Dental Hospital, Great Portland Street). This department has recently been reorganized and equipped on the highest standard of modern requirements, and is admirably adapted for the teaching of students in the science and art of Dental Surgery.

Forty-seven APPOINTMENTS are open during the year to students, and paid appointments to the annual value of over £500.

SCHOLARSHIPS, EXHIBITIONS, and Prizes of the value of over £1,000 are awarded annually.

BUCKNILL SCHOLARSHIP of the value of £167 is tenable for the earlier Medical Studies at University College and for the Final Studies at the Medical School.

GOLDSMID EXHIBITIONS.—Two of the value of 112 guineas each, the subjects of the Examination being Anatomy and Physiology, are awarded annually in September.

RECREATIONS.—The Athletic Ground of 22 acres is at Perivale and contains 22 Tennis Courts, Cricket, Football, and Hockey Grounds. A Gymnasium and Squash Racquet Court are installed in the School; while the Asphalt Tennis Court, Fives, and Racquet Courts at University College can be used by members of the Students' Medical Society.

All further information and prospectus can be obtained from the Secretary, and the Dean can be interviewed at any time by appointment.

Dean, G. F. BLACKER, C.B.E., M.D., F.R.C.P., F.R.C.S.

Vice-Dean, A. M. H. GRAY, C.B.E., M.D., F.R.C.P., F.R.C.S.
Secretary, G. E. ADAMS, F.C.I.S.

ST. MARY'S HOSPITAL
MEDICAL SCHOOL,
PADDINGTON, W.2.
(University of London.)

THE WINTER SESSION will begin on October 1st, 1920, when students can join classes in Preliminary, Intermediate, or Final Subjects.

Special features of this Medical School are:—

Healthy West-end Situation.

1,000 Beds for Clinical Teaching.

Athletic Ground of 10 acres.

Owing to the recent affiliation, for teaching purposes, of the Paddington Infirmary, Paddington Green Children's Hospital, and the Maida Vale Hospital for Nervous Diseases, the scope of the Clinical Instruction has been greatly increased.

Full particulars and prospectus may be obtained from the DEAN.

University College Hospital
Dental School
(NATIONAL DENTAL HOSPITAL),
Gt. Portland Street, W. 1.

WINTER SESSION commences
1st October, 1920.

This Hospital and School, situated in the centre of a large population, and within a few minutes of University College Hospital, has recently been reorganized and equipped on the highest standard of modern requirements, and is admirably adapted for the teaching of students in every branch of the Science and Art of Dental Surgery.

The mechanical laboratory, conservation room, and X-rays department are replete with all the latest approved appliances.

Students (men and women) enter as students of University College Hospital, and attend classes in Chemistry, Physics, Anatomy, and Physiology at University College, adjacent to University College Hospital.

Each student serves as a dresser in the extraction, anæsthetic, conservation, and X-rays departments.

Three house surgeons are appointed half-yearly.

ENTRANCE EXHIBITIONS of the value of £40 and £20 are awarded each session.

The Calendar, containing full information as to lectures, fees, prizes, &c., may be had on application to the SUB-DEAN FOR DENTAL STUDENTS, who attends the hospital on Monday mornings at 10 a.m.

LONDON HOSPITAL MEDICAL COLLEGE
AND DENTAL SCHOOL

THE WINTER SESSION WILL
OPEN on Monday, OCTOBER 4th.

The Hospital is the largest in England, 933 beds are in constant use. Last year the number of in-patients, 19,699; out-patients, 118,635; dental patients, 3,097; major operations, 7,793.

The MEDICAL COLLEGE AND DENTAL SCHOOL are essentially modern, with large laboratories equipped with the latest and most approved appliances.

The Staff is so large as to permit of individual attention being paid to all students.

RESEARCH FUNDS of over £26,000 give unrivalled facilities for medical research.

APPOINTMENTS.—Over 160 appointments are made annually from students of the College recently qualified.

SCHOLARSHIPS AND PRIZES.—33 scholarships and prizes are awarded, including 4 entrance scholarships.

CLUBS' UNION.—Athletic ground of over 13 acres, Students' Hostel, &c.

For Prospectus and particulars apply to the DEAN (Professor William Wright, M.B., D.Sc., F.R.C.S.), who will be pleased to make arrangements for anyone wishing to see the Medical College and Dental School.

LONDON (ROYAL FREE HOSPITAL)
SCHOOL OF MEDICINE FOR WOMEN.

Preparation for Higher Local Cambridge and Senior Cambridge Examinations if desired. Terms reasonable. Fortnightly papers. Address—Miss FELL, Bank House, Thorner, Leeds.

COACHING for Examinations.
Private Lessons and Classes for children and adults. Special lessons for children temporarily unable to attend School.—Miss WEBB, B.A. London, Miss A. M. WEBB, Cambridge Tripos, 7 Scarsdale Villas, Kensington, W.8.

Truman & Knightley

SCHOLASTIC AGENTS LTD

This Agency is under distinguished patronage, including that of the Principals of the majority of our leading Schools.

Assistant Masters and Tutors.

This department is under the personal direction of **Mr. JAMES HEARD, B.A.** (of Westminster and Trinity College, Cambridge).

Assistant Mistresses.

The work of this department is divided into four groups, each under a trained Assistant, so that the requirements of each client may receive individual attention.

Lady Matrons, Housekeepers, & School Secretaries.

- This department is under the personal direction of a Trained Lady Superintendent.

THERE IS NO CHARGE FOR REGISTRATION, and the rate of commission charged to those for whom an appointment is secured has recently been reduced.

Transfer of Schools and Partnerships.

This department is under the personal direction of **Mr. TRUMAN**, who has had a wide experience in the conduct of negotiations connected with the transfer of schools, and who is in a position to give sound advice and assistance to those seeking to buy or sell Schools and Partnerships.

NO CHARGE IS MADE TO PURCHASERS.

All communications and inquiries are treated in the strictest confidence.

Offices : 158-162 Oxford Street, London, W.1.

Telegrams: "Tutoress, Phone, London."

Telephone: Museum 4440 (2 lines).

BELL'S NEW TEXTBOOKS.

ELEMENTARY ALGEBRA, Part I.

By CLEMENT V. DURELL, M.A., Senior Mathematics Master, Winchester College; and G. W. PALMER, M.A., late Master of the Royal Mathematical School, Christ's Hospital. With Introduction and Full Answers. 4s. 6d. Without Introduction and with Answers only where intermediate work is required. 3s. 6d. Answers separately. 1s. [Cambridge Mathematical Series.]

The authors have assumed that discussions in the text are rarely of value to the ordinary boy, and cannot replace oral instructions. In the text will therefore be found only a few simple cautions, some definite rules, and a number of illustrative examples. The first part covers the usual course up to and including quadratic equations. The authors have had the assistance of a teacher with wide experience of the needs of students at Technical Colleges and Evening Schools.

Times Educational Supplement.—"Full of interest and should stimulate the application of elementary mathematics to ordinary affairs."

BUSINESS ARITHMETIC. A First Year Course.

By C. PENDLEBURY, M.A., F.R.A.S., formerly Senior Mathematical Master at St. Paul's School, and W. S. BEARD. Crown 8vo. With or without Answers. 3s. 6d.

This book contains all that is necessary for a first year's course for students in Day Continuation Schools, and also for pupils in Secondary Schools who may be preparing for a business career.

AN ELEMENTARY TREATISE ON DIFFERENTIAL EQUATIONS AND THEIR APPLICATIONS. By

H. T. H. PIAGGIO, M.A., D.Sc., Professor of Mathematics, University College, Nottingham. Demy 8vo, 12s. net.

[Bell's Mathematical Series. (Advanced Section.)]

The earlier chapters contain a simple account of ordinary and partial differential equations, suitable for those with no previous knowledge of the subject, while the later chapters cover the course for the Cambridge Mathematical Tripos, Part II, Schedule A, and the London B.Sc. Honours. The number of examples, both worked and unworked, is very large, and all the answers are given.

A FIRST COURSE IN NOMOGRAPHY. By S. BRODETSKY, M.A., B.Sc., Ph.D., Reader in Applied Mathematics, Leeds University. Demy 8vo, 10s.

[Bell's Mathematical Series. (Advanced Section.)]

Graphical methods of calculation are becoming of ever greater importance in theoretical and industrial science, as well as in all branches of engineering practice. Nomography is one of the most powerful of such methods, and the object of this book is to explain what nomograms are, and how they can be constructed and used. It is illustrated by sixty-four figures, most of which are actual nomograms, their construction being analysed in the text. In addition there are numerous exercises illustrative of the principles and methods.

A FIRST COURSE IN THE CALCULUS. By W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. Complete, Crown 8vo, with Answers, 8s. 6d.; or, Part I, Second Edition, 4s.; Part II, 5s.

The first part of this First Course is devoted to the Differential Calculus, with applications to Rates, Maxima and Minima, and Geometry. The second half deals with the Differentiation and Integration of Trigonometrical Functions, the Differentiation of Products, Quotients, and Parameters, the Inverse Trigonometrical Functions, the Application of the Calculus to Approximations and Errors, Miscellaneous Methods of Integration, Applications of the Integral Calculus to Lengths of Curves and Areas of Surfaces, the Differentiation and Integration of Logarithms, Power Series, Differential Equations, &c.

ARITHMETIC, Part II. By F. W. DOBBS, M.A., and H. K. MARSDEN, M.A., Assistant Masters at Eton College. Crown 8vo, 3s. 6d. Part I, now in its Third Edition, 3s. 6d.

[Bell's Mathematical Series.]

This book covers the ground required for the new combined syllabus of the School Certificate and Army examinations, and deals in some detail with Mensuration and Logarithms. There is a large selection of Revision Papers dealing with the various subjects in turn.

LE FRANÇAIS. A PRACTICAL FRENCH COURSE.

By MARC CEPPI and LL. J. JONES, B.A., both of Whitgift School, Croydon. Part I, now ready, 2s. 6d.

Part II, in the Press.

This new Course is founded on the recommendations contained in the Board of Education Memoranda on the Teaching and Organization in Secondary Schools (Modern Languages), 1912, the Board of Education Report of an Inquiry into the Teaching of French in London Secondary Schools, 1918, and the Report of the Government Committee appointed to inquire into the Position of Modern Languages, 1918. The Grammatical Terminology is, as far as possible, that suggested by the Joint Committee.

HISTORICAL ATLAS FOR SCHOOLS (1789-1914).

Compiled and drawn by B. V. DARBISHIRE, M.A., Trinity College, Oxford. 32 pp., with 108 Maps and Diagrams, and Letterpress. 2s.

This little atlas is designed for use in teaching the history of the world (outside the British Isles) from the French Revolution down to the outbreak of the Great War. The utmost simplicity has been aimed at, not only with a view to cheapness, but also to ensure the clearness so necessary in a school atlas.

New Historical Readers for Junior Classes.

HEROES OF THE HOMELAND. By GEORGE GUEST, J.P., B.A., Head Master of St. Paul's School, Bournemouth. With numerous Illustrations in Colour and Black and White. 1s. 8d.

GREAT LEADERS IN HISTORY. By GEORGE GUEST, J.P., B.A. With numerous Illustrations in Colour and Black and White. 2s.

For Intermediate Classes.

A SOCIAL HISTORY OF ENGLAND. By GEORGE GUEST, J.P., B.A. Crown 8vo, 2s. 6d.

A CONSTITUTIONAL HISTORY OF ENGLAND. By GEORGE GUEST, J.P., B.A. Crown 8vo, 2s. 6d.

New and revised editions of these two books, bringing them up to the inclusion of the Treaty of Versailles, 1919, have just been published.

OCCASIONAL NOTES.

Professional Preliminary Examinations.

THE Board of Education announce, in Circular 1166, their continued recognition of the seven First Examinations approved provisionally in Circular 1034, viz. the Oxford and Cambridge Senior Locals; the School Certificate Examinations of the Oxford and Cambridge Board, and of Bristol, Durham, and the Northern Universities; and the London General School Examination. They also recognize provisionally, until the end of 1921, the seven corresponding Higher Certificate Examinations as Second Examinations. The Senior Certificate Examination of the Central Welsh Board is recognized provisionally, until the end of 1921, as a First Examination. Good progress has been made with the exceedingly important question of recognition by professional bodies of First Examinations as exempting from their preliminary examinations. Seven of these bodies accept a First Examination for this purpose without any qualification; whilst seven others, including the General Medical Council, the Institution of Civil Engineers, the Royal College of Physicians and Surgeons, the Institute of Chartered Accountants, and the Pharmaceutical Society, accept certificates subject to stated conditions. The examination chaos which has so long afflicted English secondary education is thus being gradually reduced to something like order and system. We hope that the Board and the Examinations Council will not let the matter rest until all the professional bodies have come into line.

THE War Office leaves us in no doubt about its attitude towards education. With its Army Orders of June, 1920, it issues a twopenny pamphlet of "General

The Army Educational Creed.

Principles" of educational training. The first principle manifestly is that the Army is to be paramount. Education is to be carried on not by schoolmasters who have become soldiers, but by soldiers who have been set apart as schoolmasters. The education of his men is proclaimed to be a part of the duty of every officer. It is all in the day's work, and the members of the new Educational Corps are merely commissioned and non-commissioned officers who are specially deputed to organize and carry out work in which every officer is expected to take a share. "All commanders are responsible for the training of the troops under their command. Educational training is an integral part of the normal training of a soldier." Accordingly, it is specifically laid down that the Educational Corps is not a body having full responsibility for education; its business is merely to "guide and assist the natural leaders of the Army in carrying out a particular part of the training necessary to make an efficient soldier." Once the education officers have been put in their proper place, the pamphlet proceeds in a thoroughly capable way to lay down a body of sound educational doctrine which all experts will approve. The citizenship of the soldier is fully recognized. The State's responsibility for his future is implicitly accepted by the provision for vocational training. A notable and a hopeful document.

A DEPUTATION from the Secondary Schools Association, with Sir Philip Magnus as spokesman, recently waited upon the Chancellor of the Exchequer and the President of the Board of Education to urge the advisability of setting up an independent committee to consider the possibility of amending the Superannuation Act. Though it was suggested by the deputation that the provisions of the Act ought to be extended to teachers in all private schools, it was definitely claimed that all private schools are not profit-making ventures, even, for instance, when limited interest is paid on capital sunk in buildings and land. Speakers were on stronger ground when they pointed out the evil of making the school, and not the teacher, the unit, and the loss to education through the hindrance to interchangeability of teachers consequent upon the wedge which the Act drives between two kinds of schools. In replying, Mr. Fisher stated that the working of the Act was being carefully watched, but he held out little hope of amendment. Mr. Chamberlain added, quite frankly, that the Government would not appoint a committee to make recommendations which the Government could not accept. The result shows that there is little possibility of drastic remodelling of the Act at present. If, however, the various associations connected with the different types of secondary education will combine to press for amendments to clauses in the Act, which time has already shown to be illogical and inequitable, their efforts may meet with a reasonable amount of success.

THE Board of Education's Circular 1172, though it is very brief, and though it follows inevitably from the Education Act, 1918, well deserves a passing notice. The effect of Sub-sections (1) and (2) of Section 8 of the Act was to abolish half-time employment, to remove all provisions under which children can be exempted from

Abolition of "Half-time."

school attendance below fourteen, and to enable local education authorities to require school attendance up to the age of fifteen. As the appointed day for the purpose of these sub-sections was not to be earlier than the official termination of the war, that day has not hitherto been fixed; but it is now confidently expected that the war will officially terminate before the end of the present year, and the Board have accordingly fixed January 1, 1921, as the appointed day for the purpose in question. We are thus within sight of a change which all educational reformers, and all lovers of children, have ardently desired for several decades past. The crux of the situation, as is well known, has always been the textile industries of Lancashire, and the argument for the half-time system has been that without it the cotton industry would collapse. To most broad-minded patriots it has seemed a sinister plea that the prosperity of a great industry should depend upon the exertions of children under fourteen. Let us now hope that Lancashire will be second to none in preferring the true welfare of the children to every other consideration.

MANCHESTER UNIVERSITY is striking out a new line. It has decided to set up a Secondary Schools Consultative Committee to discuss the relations between the University and the schools which feed it, and make representations on matters of common interest. It is well done. University authorities do not realize the effect on the schools of the examinations they prescribe. Not infrequently the school has to choose between the interests of education on the one hand and the demands of the university on the other. The demand of the credit standard in five subjects at the School Certificate Examination tends to declass the subjects in which no credit pass is required, or even to oust them altogether from the time-table. Art, craft, domestic subjects, manual training are inspected, but do not count. The Higher Certificate Examination raises other questions of contact, if not of collision. There is the exclusion of geography and the relation of the Higher Certificate to the Intermediate Examination. There is also the big question of the reconstruction of the science curriculum on the lines of Sir J. J. Thomson's report. The I.A.H.M. invited the science professors of the University to discuss this question with them at both Liverpool and Manchester. There was general unanimity as to what should be done, but the matriculation requirement stands yet unaltered, and, as long as it remains, nothing can be done. There is, further, the question of the training of teachers, which opens up other subjects for mutual discussion and adjustment. The new move is one to be welcomed.

AT its recent annual conference, the Miners' Federation decided to ask the whole trade union movement, through the Trade Union Congress, to assume complete responsibility for Ruskin College, Oxford, and the London Labour College. This proposal, which we understand the Congress is likely to approve, is a distinct advance in the Labour attitude towards working-class education. Hitherto there has been no concerted action by the trade union movement as a whole. In addition to the efforts of the two colleges mentioned, the Workers'

Educational Association and the Co-operative Union have been, and are, important agencies for working-class education; and there are many local agencies which provide educational facilities of which workers and others take advantage. It is becoming increasingly urgent that a general policy of adult working-class education, in which all existing agencies take their part, shall be inaugurated, and the proposal of the Miners' Federation may be regarded as a first step in this direction. Writing in the *Westminster Gazette*, Mr. G. H. D. Cole urges that direct control by the working-class bodies is essential if the workers are to feel that the education provided is their own; and that, unless they do feel this, they will not be ready to take advantage of it.

THE report presented last year by the Adult Education Committee of the Ministry of Reconstruction provides the material for a full consideration of the problem of adult education. Mr. Cole thinks that if the Government acted upon the recommendations of this report the trade unions would speedily come forward with substantial grants in aid. He combats the idea that in such circumstances the workers would accept only a particular kind of education, possessing a certain definite propagandist bent. The education provided under working-class auspices will, he thinks, be largely of a civic character. Personal culture will not be undervalued, but education will be regarded as an instrument of social and economic emancipation. It is essential for the community to carry education far beyond school years for the largest possible proportion of the population, and, even if the control of working-class education is placed in the hands of the workers, we have faith enough to believe that education itself will, as it develops among the workers, make impossible a blind adherence to certain narrow doctrines preached to-day by extreme sections of the Labour Party.

THE financial position of training colleges is well known to be a cause of grave anxiety at the present time, especially to the governing bodies of denominational and other voluntary colleges. **Training Colleges.** The Central Board of Finance of the Church of England have voted substantial grants to the church training colleges, and these grants will offer some relief; though we cannot understand statements in the lay press that the church training colleges will now be "in a strong position as compared with the municipal colleges," seeing that the latter are rate-supported. The broad fact will, we fear, remain that, except in certain liberally conducted municipal colleges, it is impracticable, on the present scale of grants, to offer such salaries as will attract the right kind of applicants for lectureships in training colleges. The Board of Education is confronted with the exceedingly tough problem, how to rectify this impossible position, without giving an overwhelming amount of State support to a number of colleges conducted on purely denominational lines. Another difficult problem is that of the unsatisfactory two-year system of training. Having regard to the number of teachers now required, it is perhaps too much to hope for an immediate general extension of this inadequate period; but we may hope that the four-year system, including a year of post-graduate professional training, will soon become much more common.

THE Durham County Education Committee have decided to free, by instalments, all the secondary schools for which they are responsible. It is a departure which must profoundly influence the development of education. Presumably, instead of a school admitting fee-paying pupils on an entrance examination, and free scholars on a competitive test, all admissions will be regulated by the results of the same examination. The consequence, it may be anticipated, will be that a considerable number of children whose parents are willing to pay fees for their education will not find places in public secondary schools. If people willing to pay for the education of their children are not provided with suitable institutions by local education authorities, the result will probably be that private enterprise will do so, and there will be a revival of successful proprietary schools. On the other hand, if the decision to provide free secondary education is associated with the condition that a pupil admitted to a school must undertake to remain there until sixteen years of age—and some such condition ought to be made—it may be discovered that the speculative benefits of three or four years' further systematic education will not compete successfully with the immediate advantage of the high wages now obtainable by the youngest of young persons. The policy of supplying free elementary education was justified on the ground that attendance at elementary schools was compulsory. The justification for free secondary education appears to be the idea that "opportunity" is synonymous with "attainment": that what is good for Dick must, of necessity, be available for both Tom and Harry.

THERE are some not unenlightened people who think that it was a mistake for school fees for elementary education to be abolished, and it has been suggested recently that, in view of high wages and the greatly increased cost of schooling, this source of revenue should be revived. It is an impracticable proposal, and, if it were not so, it is doubtful whether the relatively small sum to be derived from this source would be an adequate compensation for the trouble of collecting it. If each scholar in average attendance paid 6d. a week, the total revenue would not be more than £6,000,000, and in these days, when the cost of the service of education is advancing by leaps and bounds, a few millions seem to be of little consequence. According to the President of the Board of Education, the total expenditure in 1913-14 was £30,775,000, of which sum the grants of the Board of Education amounted to £14,380,000, the rates contributing the residue. In 1920-21, the estimate of the Board of Education comes to no less a figure than £45,755,000, and the rates to be raised by local authorities to £31,716,000, an aggregate of £77,471,000. These figures are alarming enough to disturb the repose of deceased Chancellors of the Exchequer, but they do not include to any considerable extent the expenditure to which the nation is committed under the Education Act of 1918.

THE attitude of the Bristol Education Committee towards private schools will commend itself to all interested in education no less than to those who desire to see a reasonable effort being made to economize in the expenditure of public funds. It appears that this committee, after making an exhaustive survey of the private schools
